It' Steve, W1GSL, coordinator of the MIT Flea, who maintains
and distributes the list. He includes anything within an
un-reasonable drive, for the die-hard collectors/sellers, and
anything of particular interest to him. It also goes out on
the reflectors (barc-list, ne-ham, scan-mass-east & scan-tech;
I'm not sure if it's also on EMA-list or NEDIV-list or not,
it probably ought-to-be) and packet and is archived on WWW; I'll cut
and paste from the Oct.03 edition:

"This list has been posted... as a service of the individual home
page owners, to the following WWW sites.

http://www.berkshire.net/~robbins/flea.html
http://www.connix.com/~wz1v/ne-fleas.html
http://www.mmra.org/~mmra/flealist.htm
http://www.qsl.net/ema-arrl/info/flea.txt +
http://www.qsl.net/vhfnews/ne-fleas.html
http://www.senie.com/arrl/flealist.html
http://www.webss.com/fleas
http://uhavax.hartford.edu/~newsvhf/ne-fleas.html

List is normally updated twice a month - look for the latest version
Be sure to check for the latest version as updating is under the
control of the page owner.

73 Steve F
W1GSL

The Listing for Derry is Londonderry actually, the other side of I-93
from Derry --

8 Nov Londonderry NH IRS @Lions Club $10@7 $2@8
Paul K1LLX 603 432 1538 F+

The other two events near Boston before New Years are

15 Nov Plymouth MA Mayflower RC @Mem Hall $2@9 $14/T@8
Jon WS1K 508 746 0162 F

22 Nov Newton MA WARA/1200RC Auction @Masonic $2@11
Eliot W1MJ 508 664 0773 F+

See the full list for decoding and for outlying regions (NY, Maine,
PQ, etc) and farther future (it includes HossTraders dates through
the year 2000, which should help others avoid schedule conflicts).

It is amazing how often people accept the statistics they like and reject
the ones they don't like. Probably happens more than 52.9% of the time.

>I thought it was 4 watts and 4 miles. <g>

usually... depends on the type of the antenna that you have... beam
or rubber duck...

geneally speaking, 1 watt = 1 mile is pracical.

if sun activity is high, you may be able to talk someone over Europe
because of propagation... if you prefer to talk someone over the
long distance, you may want to get one with SSB because European
stations are using FM + SSB, north american stations are using AM +
SSB.

1249. Announcing the Naturist Amateur Radio Club

Newsgroup: rec.radio.amateur.misc
Date: 1997-10-21 00:00:00 UTC
From: Ben Thornton <bthorn@jump.net>
Message-ID: <344D6412.4E940B64@jump.net>
Source record: 188336

Bob, N5KF, and Ben, WD5HLS, of Austin, Texas, have formed a new amateur radio club, callsign NU5DE, whose purpose is to promote the naturist philosophy among amateur radio operators worldwide. The FCC has officially assigned this callsign to The Naturist Amateur Radio Club. The club call can be used primarily for naturist events where amateur radio is being promoted and to promote naturism among the amateur radio community.

FCC information:
Callsign: NU5DE
Club Name: NATURIST AMATEUR RADIO CLUB
Addr1: PO BOX 200812
Addr2: AUSTIN TX 787200812
Country: USA
Effective: 20 Oct 1997
Expires: 20 Oct 2007
Trustee: ROBERT G REDOUTEY N5KF
Location: 30.506 N 97.842 W

Bob and Ben, along with Jim Campbell, WB6ZPB, have been active participants in the Naturist Society Amateur Radio SIG, whose annual Nude Recreation Week special event stations have become a familiar sound on the airwaves each July for the past 5 years.

For more information about the club, contact Bob via Email at n5kf@aol.com or Ben at bthorn@jump.net.

I just thought I would pass along the following to those of you
Hams who might be considering installing Internet Explorer 4.0 from Microsoft. I installed it about a week ago and after numerous crashes and problems I have decided to buy Netscape. So I uninstalled it. After I rebooted my computer I tried to connect to the internet but my Dial-Up Networking connection to my internet provider did not work anymore. I then tried to connect via Agent (an email reader), but it crashed. After many hours I went to control panel and network and then TCP-IP and reinstalled this. This finally solved my problems. I called my internet provider and they said that many people have had to completely
reinstall windows 95. Soo, be forewarned. If you plan on installing IE 4.0 plan on a long night if you decide to uninstall it.

Actually, I believe the source for that number is the ARRL survey that
is so often quoted, you remember, the one that says the majority of amateurs
support retention of the code requirement?

Hello everybody, and thanks for reading. I have for sale:

Kenwood TH-22AT 2 meter HT in perfect working condition.

Radio includes:

* new PB-32 6 VDC 600 mAh NiCAD battery

* BT-9 alkaline battery pack

* belt clip and lanyard

* SMC-31 speaker mike

* original box

* manual

* wall charger

Radio features 40 memory channels, one call channel,
CTCSS, full DTMF keypad, three transmit power settings,
and the radio is menu driven. Many more features too
numerous to mention here.

This rig has worked fine for me for the year that I have
had it, but it is time to upgrade. This is a neat little
rig that easily fits in your shirt pocket, and has been very
handy for me as a backup to my other HT.

Asking $250.00 plus shipping.

If interested, send me an email.

Remove the "#" from my email address given above.

Yes, you aren't having an unusual problem, the new "Dial Up Connection"
wipes out your old setting and thus you cannot easily recover from the
installation of the new IE4.0 BVrowser. Same goes for the "update" Dial
Up connection from MS...it will effectively wipe out your old dial up
and you'll get to install everything again! No fun! Be careful!

1258. Kids discovering amateur radio, continued

Newsgroup: rec.radio.amateur.misc
Date: 1997-10-21 00:00:00 UTC
From: ham@w3eax.umd.edu
Message-ID: <62ipni$m2j$1@w3eax.umd.edu>
Source record: 188345

It's like a whole generation was missed somewhere.

Or was it?

They've all got computers.
I learned in 4th grade on a Commodore Pet.

They've all got video games.
I had a video game - called an Atari 2600.

I had a teacher who was a ham. He showed me a
radio. My dad introduced me to a ham in 1983
when I was 14. Even after the computers, it
was still the coolest thing I had ever seen.

Now I'm the teacher (OK, I'm actually an engineer,
but I've been told to become a teacher).

Computers and radio are closer than ever; there
are radios in computers, and vice versa, and
communicating via modulate electromagnetic wave
is still as interesting and mysterious as it
ever was.

You can't see a wave. You can detect it, and
we are allowed to build the devices to create
'em and find 'em.

The kids I'm teaching are learning the same
thing, and attacking it with the same fervor
I did at that age.

Modes, tests, whatever. Radio is still radio.
Build. Test. Fail. Try again. Succeed.
Make a contact or two or a thousand. Build an
antenna. Expose a kid to it.

It's up to you.

In the earlier part of September, a company called Ladyfinger or Ladybug (or something like that) had a Nickel Metal Hydride (NiMh) battery pack for the Uniden BC235XLT Trunk Tracker, for $18. It was all made up with shrink-wrap, & wired with the little connector to accomodate the battery connector inside the radio. I emailed them, but lost their email address. They said that the batteries would be ready in a month or so. Does anyone have their email address, or has anyone obtained these battery packs yet? Only comparable NiMh pack I've seen for the 235XLT is available from Metro-West for $45, plus shipping and applicable taxes.

I just wish that I had read your post before I installed IE 4. It
changed so many things and screwed so much up that I spent an entire day
getting rid if it. I also had to redo my internet connection. So take
heed; this is not just idle chichat.

From: Jim Kelly <skeptic@netaxs.com>
Message-ID: <344DF58D.727D@netaxs.com>
Source record: 188214

LARC FALL 1997 MEMBERSHIP DRIVE UNDERWAY

LARC members are very special people and LARC is a special kind of ham radio, electronics, and computer club. Our members make possible the valuable public service work LARC is doing. LARC's public service effort includes working publicly through our visibility and good will for tolerance within the amateur (ham) radio community; being there for gay, lesbian, bi-sexual and transgendered people interested in our technical hobbies; being there for young G/L/B/T technically-oriented people looking for support and to make new friends; offering our members a sense of community; providing the opportunity for friendship and mutual support among our members; enlisting the support and good will of our fellow amateur radio operators, electronics and computer enthusiasts; doing our part to strengthen the amateur radio service; and making charitable contributions to causes and organizations within and outside of amateur radio. No other gay amateur radio club is doing this kind of important work, and that's why it's so important that LARC continues to grow and prosper.

The Lambda Amateur Radio Club (LARC), an international club primarily for gay, lesbian, bisexual and transgendered radio, electronics and computer enthusiasts and their friends invites you to join our club now during our Fall 1997 membership drive. LARC membership is open to all persons who are supportive of sexual minorities. As a member, you'll receive our newsletter, the _Lambda Net News_ each month, learn about our public service activities, keep track of our weekly activities such as internet relay chat (IRC), and follow the planning and maybe even participate in our fourth LARC-sponsored DXpedition-Caribbean vacation.

If you'd like to make many new friends and help support LARC's public service effort, consider joining our club! We'll be happy to mail you an application right away. Just send an email request for an application to:

larc@net-quest.com

or write to LARC, POB 56069, Philadelphia, PA 19130-6069.

If you're not already on LARC's email reflector, larc@seta.fi, you're welcome to subscribe, even if you're not a member of LARC. All you ever wanted to know about our email reflector, including instructions on how to subscribe and unsubscribe can be had by sending an email to:

majordomo@seta.fi

with the following line appearing by itself in the body (not the Subject) of the message:

info larc@seta.fi

We hope to hear from you soon!

PS: Be sure to check out our club's homepage:

One way to stop anyone from listening to your phone calls, is do all your calling on a base telephone. If you do have cordless or cell phones, & what you say isn't illegal , then you shouldn't have to worry about being heard.

Body handling: HTML body converted to readable text

IMHO I believe it is the speed of light MINUS the velocity factor of the
transmission medium (wire). IE: most Belden RG-8 has a VF
of 85%, sooooo electricity (digital or analog) flows in that wire
at the speed of light minus 15%.

73's,
Bruce

Fair enough! but it works both ways; the rest of the universe
doesn't owe any obligation to help amateur radio survive.

I get some enjoyment from playing with radio, and I will only get
that enjoyment as long as there are others to explore it with - people
that I can help a bit and people who can help me a bit. When I see the
intensity of some of the arguing going on on this forum, and when I hear
some of the "Go away, YOU ARE NOT DX" attitudes on the air, I feel
saddened that it must strongly discourage some people that I'd be happy
to meet on the air.

> The difficulty with ham radio vs. other hobbies is that they can't be persued

I'm not convinced it's quite so easy to pick. I'd rather judge how
interesting I find the QSO rather than just use a broad criterion like
age or rig.

Cheers

1271. Heath IB-101 Freq Counter help needed

Newsgroup: rec.radio.amateur.misc
Date: 1997-10-22 00:00:00 UTC
From: Nicholas Thomas <njt@pixeltech.com>
Message-ID: <344E5F65.7210FF79@pixeltech.com>
Source record: 188223

My HEATH IB-101 Freq Counter (built in 1970) has 3 of 5 buffer-storage ICs
that are fried. The other 2 work fine and output good signals to the readout
when interchanged with the fried ICs. I'm unable to locate a source for
replacement parts and would very much appreciate any suggestions. (I know,
the trash bin is an option but, please, last resort only!)

Heath part number is 443-29. No help, not listed in NTE or SK catalogs. IC
was made for Heath by Fairchild Semiconductor. Think both are out of this
business now. Generic or Manufacturer's part number off parts list in manual
is CuL995979. Also not listed in NTE or SK catalogs. Also not listed in
Fairchild section of Gerber Elect Catalog dated 1987. Only markings on IC are
"F" Fairchild logo, Heath p/n 443-29 and date code 7036.

IC is 16 pin DIP. IC contains 4 flip-flops and a gate. Pin 16 is Vcc, 15 thru
10 are input/outputs, 9 = no connection, 8 = gnd, 7 thru 2 input/outputs and
1 is gate.

Anyone know of possible parts sources? Or cross-reference to another part
number (hopefully to something available now)?

Anyone out there have a junk chassis with these ICs intact? The Heath
IB-1100, IB-1101 and IB-1103 are bigger versions of this Frequency Counter
family with more functions/options and would likely have the same
buffer/storage ICs.

Would love to get this baby running again. It is amazingly accurate in the
audio and low frequency ranges.

Again, thanks for the read & best wishes.

Shane:
I bought one about six months ago and it is a great radio. It does meet all of its specifications including sensitivity. I have experienced intermod on it but the feature it has to increase the intercept point seems to have done the trick.
It is not easy to program however. I bought ex-clone software which allowed me to program it from the computer and that worked well, however I have learned that it is not available anymore.
My recommendation is to go ahead with your purchase. Feature for feature, it is hard to beat at the price which they are asking for it.

73's...Dick, K7RNZ

1274. SS Rules

Newsgroup: rec.radio.amateur.misc
Date: 1997-10-22 00:00:00 UTC
From: K0HB@JUNO.COM
Message-ID: <877554969.6025@dejanews.com>
Source record: 188226

1) Object For stations in the United States and Canada (including territories and possessions) to exchange QSO information, as detailed in Rule 4, with as many other US and Canadian stations as possible on 160 through 10 meters, excluding 30, 17 and 12 meters.

2) Contest Period

CW -- First full weekend -- November 1-3, 1997.
Phone -- Third full weekend -- November 15-17, 1997.

Time -- Begins 2100 UTC Saturday and ends 0300 UTC Monday. Operate no more than 24 of the 30 hours. Off periods may not be less than 30 minutes in length. Times off and on must be clearly noted in your log, and listening time counts as operating time.

3) Categories

Single operator One person performs all transmitting, receiving, spotting and logging functions.

Multioperator, single transmitter only Those obtaining any form of assistance such as relief operators, loggers or use of spotting nets, including PacketClusters.

QRP, single operator QRP is defined as 5 watts output or less.

4) Exchange A consecutive serial number, precedence ("A" if you run 150-W output or less, "B" if more than 150 W, or "Q" if 5-W output or less), your call sign, check (last two digits of the year you were first licensed) and your ARRL/RAC Section. For example, WJ1U answers W1AW's call by sending W1AW NR178 A WJ1U 89 CT for QSO number 178, less than 150 W, first licensed in 1989 and Connecticut Section.

5) Scoring

QSO points Count two points for each complete two-way QSO. No cross-mode contacts. Work each station only once, regardless of the frequency band.

Multiplier Each ARRL section (listed on page 12 of this issue) and RAC section plus VE8/VY1 -- maximum of 79. KP3/KP4 is the Puerto Rico Section, KV4/KP2 and KG4 (Guantanamo Bay only) stations are in the Virgin Islands Section, and KH6 and other US possessions in the Pacific count as the Pacific Section.

Final score Multiply QSO points (two per QSO) by the number of ARRL/RAC sections (plus VE8/VY1).

6) Miscellaneous

A transmitter used to contact one or more stations may not subsequently be used under any other call during the contest period (with the exception of family stations).

One operator may not use more than one call sign from any given location during the contest period.

The use of two or more transmitters simultaneously is not allowed.

The use of non-Amateur Radio means of communication (eg, telephone) for the purpose of soliciting a contact (or contacts) during the contest period is inconsis-tent with the spirit and intent of this announcement.

7) Reporting

Entries must be postmarked no later than 30 days after the end of each contest (CW -- December 3, 1997; Phone -- December 17, 1997). No late entries can be accepted. Paper entries with more than 200 QSOs must include cross-check sheets (dupe sheets). Use ARRL November Sweepstakes forms, a reasonable facsimile, submit entry on diskette, upload your entry to the ARRL BBS, or send your entry to ARRL HQ via Internet.

You may submit your contest entry on diskette in lieu of paper logs. The floppy diskette must be IBM compatible, MS-DOS formatted, either 3.5 or 5.25 inch (40 or 80 track). The log information must be in an ASCII file, following the ARRL Suggested Standard File Format, and contain all log exchange information (band, date, time in UTC, call of station worked, complete exchange sent, complete exchange received, multipliers [marked the first time worked] and QSO points). One entry per diskette. An official summary sheet or reasonable facsimile with signed contest participation disclaimer is required with all entries.

You may submit your contest entry via the ARRL BBS (860-594-0306), anonymous FTP to ftp.arrl.org, or via Internet to contest@arrl.org. Send your summary sheet file (Make sure it includes all the pertinent information outlined in the official ARRL summary sheet.) and your log file following the ARRL Suggested Standard File Format.

8) Club Competition: ARRL-affiliated clubs for club gavels and awards in the local, medium and unlimited categories.

9) Awards: Certificates to the top single operator CW and phone scores in "A," B" and "Q" categories in each ARRL/RAC Section, and the top multioperator entry in each ARRL Division and Canada.

10) Condition of Entry: Each entrant agrees to be bound by the provisions as well as the intent of this announcement, the regulations of his licensing authority and the decisions of the ARRL Awards Committee.

11) Disqualification: See the Contest Disqualification Criteria. These criteria are published annually in The ARRL Contest Yearbook, on ARRLWeb (http://www.arrl.org/contests/ccdq97.html#disqualification), and were last published in QST in the August 1995 issue (page 118).

1275. HELP DX CLUSTER VIA INTERNET

Newsgroup: rec.radio.amateur.misc
Date: 1997-10-22 00:00:00 UTC
From: n9mxt@aol.com
Message-ID: <19971022231300.TAA27288@ladder01.news.aol.com>
Source record: 188227

Hello,
I used to get on the DX Cluster via my 220MHz radio out here in Illinois.
However, I got rid of most of my gear a while back. I would like to know how
I can connect or monitor the DX CLUSTER info via the Internet. I was told
that some people do this and wanted to know the steps to make it happen.

Can anyone help me?? N9MXT - Jeffrey

History tells us that hams have, from the early days, been allocated parts of spectrum that were not required by commercial businesses that had developed comunications services to sell to the public for money. When a newly developed commercial service required a piece of spectrum that happened to be occupied by hams, the hams were moved off, or that allocation was simply deleted and turned over to the commercial service/s. "600 Meters and Down" was the part of the spectrum that the hams were soon banished to, the "short waves" that were considered at the time to be worthless for any serious endeavor. It was believed that that part of the spectrum was so worthless that hams would soon lose interest in trying to communicate, and that ham radio would soon fade away from lack of activity, ridding the commercial radio world of the pesky "hams". The hams then went about finding the realities of life on the short waves, and as a result of their works, the whole scenario has been played over again and again. It is a certainty that the game is not over yet.

It seems unrealistic and naive to believe that it really matters whether, with or without code in the licensing structure, that any realistic increase in the numbers of hams would change the course of communications history. We will probably always have considerable spectrum allocated for our use since changing technology demands less of the HF portion while allowing more occupants. Undoubtedly we will lose a lot of the UHF/SHF allocations to the commercials. We, not long ago, had that entire portion of the spectrum at our disposal- confirmation of the cited history.

The *numbers* assertion is just a gambit used in the no-code debate. It will have *no* bearing on the outcome.

Private conversation (on a telephone, 2-way, etc.) - no.
Not without the "someone's" prior knowledge and consent.
In other words, inform the individual of about what you
are planning to re-broadcast, then get his/her permission.

To abuse this precept is to hasten the day when the Fed's
outlaw even listening to someone's conversation. Then
only the Fed's will be able to listen to someone's
conversation.

I've written to this NG before on this subject but here goes again.
As an avid R/C'er I've come to find out that a good hobby store can
make any type/style of pack you need, and for a far better price than
most any other battery suppliers. A good store will have access to NiHH
as well as NiCd cells. Simply take your old pack to the them and see
what they can do...9 times out of 10 they'll be able to make you an
identical pack but with a much larger capacity at VERY reasonable
price.

Published: Saturday, October 18, 1997
Section: Broward News
Page: 1BR

DEALER
IN POLICE
RADIOS
ARRESTED

ANNE MARTINEZ Herald Staff Writer
The Miami businessman who tried to take Hollywood's police radio tower earlier this year was back in hot water Friday.

Metro-Dade Police arrested Alan Leonard Friday afternoon in his North Dade home and charged him with dealing stolen property, a second-degree felony that carries up to a 15-year jail sentence, police said.

``He programmed radios with Metro-Dade frequencies and sold them to people,'' said Detective Steve White, a member of Metro-Dade's Economic Crime Bureau and High-Tech Crimes Squad. ``We don't even know how he got hold of the program software to do this.''

Leonard, who already is on parole on a second-degree murder conviction for his role in an attempted robbery in 1978, was being held Friday at the Dade County Jail. Police notified the parole commission of Leonard's arrest and would likely revoke Leonard's parole and deny him bail, White said.

The FBI has been investigating Leonard, 39, for computer fraud and copyright infringement since December, when agents raided his home and business and seized a stash of Motorola radios, computer equipment and diskettes.

Metro-Dade jumped in several months ago when they took a statement from a man who said he bought two modified radios from Leonard for $1,300, according to an affidavit filed Thursday in the 11th Judicial Circuit Court in Dade County. The man turned over the two radios and was not charged with any crime.

``It's not like [radio] scanners where you can just listen to what's going on,'' Dade Assistant State Attorney Karen Gilbert said. ``They were able to transmit. That's what was dangerous.''

FBI spokeswoman Anne Figueiras said the agency is continuing its investigation and may file additional charges.

With access to Motorola software, Leonard was able to produce, use and sell radios that can access -- illegally -- the Motorola communication system

used by the FBI, Metro-Dade and other local law enforcement agencies.

Leonard made headlines in January for trying to seize Hollywood's communications tower, claiming it was part of a surplus of communications and radio equipment that he bought from Hollywood in December 1995 for $500.

The tower was included in a three-page equipment list attached to a contract signed in 1995 by Leonard and the city's purchasing director. City Manager Sam Finz said that list was never part of the original agreement.
The embarrassing episode was resolved when Leonard eventually signed an agreement releasing any claim to the police tower or any other towers owned by the city.

``It was ludicrous,'' said Finz, who added he was not surprised that Leonard was arrested. ``I'm pleased to say we have nothing to do with him anymore.''

Herald staff writer Amy Driscoll contributed to this report.

certianly not the speed of light in space 3,000 kps. It isn't knowm to
me exactly (what answer being whatever the index of refraction of light
at a given frequency in Cu is) but it is close to that speed, and not
quite constant over a large range of frequencies (but it might be awfuly
close to the same for High and low freqs)

1299. HF ham radio aboard MIR/ int'l space station, would it work?

Newsgroup: rec.radio.amateur.misc
Date: 1997-10-22 00:00:00 UTC
From: wa2ise@netcom.com
Message-ID: <wa2iseEIFyKw.9yv@netcom.com>
Source record: 188354

Could HF communications be done between the ground and orbit on a space station, like MIR (when they're not busy fixing it) or the proposed International Space Station? I realize the ionosphere will reflect some/all? of the HF aimed at the horizon from a ground station, but would radiation heading upwards punch thru and get heard by a ham aboard a space station? Have heard (Sky and Telescope magazine about a year or two ago had a short blurb of powerful SW broadcasters signals leaking out into space) that it might be possible. Imagine the pileups, though. Could take back 14.313MHz to proper ham use if the station in space operates there.

Would 10 meters be usable for this during the dead times of the Sunspot cycle?

I believe it uses the LF signal out of Boulder (WWVB 60kHz?). I found that it would only sych for me in New York at night, but I couldn't tell if that was because of poor propagation or daytime intereference. The display indication is very vague about how much time has elapsed since last sych and I didn't even see in the manual how frequently the synchronisation was even being attempted.

The Radshack catalog claims that the clock will work with standard time transmitters in other countries, but the manual and description on the carton makes no such claim. Does anyone have any information on whether the clock will really work if it's located within the service area of other LF time standard transmissions? The fact that the clock only allows the time display to be set for the four timezones used in the lower-48 does not suggest any such capability.

The German clocks (Junhans etc) which work with DCF and MSF in Europe are far clearer in their use; they synch every hour and provide a display of the number of hours since the last successful synch. Does anone know whether the Zeit WWVB clocks use this same chipset and have the same features?

Regards,

Because everyone needs to tell time, most people desire to use a
computer, and nearly everyone is expected to be able to drive a car.

Not everyone wants to be a ham operator. If it were a necessity,
it wouldn't be ham radio.

Dr. Emil,

Thanks for that thought. As we communicate, sometimes even those with the best of good intention will find themselves in disagreement with someone. At that time we should remember also the following:

"Gentlemen can disagree without being disagreeable."

My turn to offer a small snippet of insight. I think many of us have experienced this generational phenomena in ham radio, strange as it would seem in an activity where communication is the focus. What I have found over the years is that aloofness such as noted here is commonly not what it seems, rather it is often a thin selfprotective veneer that is easily broken through by a friendly comment, question or other indication of genuine interest in the group of oldsters that may indeed feel alienated by the age gap, retreating into itself. They usually welcome a younger person who shows friendly genuine interest and doesn't come with the frequently-encountered flippant dismissals or derogations with which youth sometimes thoughtlessly treat their elders. Many of these old geezers can tell some extremely interesting, even riveting tales and it is definitely worth your while to cutivate their friendship.
Probably not surprisingly, I have experienced the reverse phemomena, where a younger person was the aloof one, and I had to start the conversation, showing the interest in him and his situation that it took to integrate him into the group and make him feel like he belonged. Now the grandfather of 3 young boys, I begin to feel what it is like to be on the high side of the fence, and hope to be able to use these past experiences and insight to avoid falling into this rut.

1319. Repeaters around Riverside, CA??

Newsgroup: rec.radio.amateur.misc
Date: 1997-10-23 00:00:00 UTC
From: chongj01@student.ucr.edu
Message-ID: <344fc316.581343@nntp.ucr.edu>
Source record: 188174

Are there any other repeaters with good coverage around the University of California, Riverside area? The only one's that I've managed to hit is the Riverside 146.880-/146.2 off my HT. Are there any repeaters (or linked repeaters) around the UCR campus that can hit the L.A. area?

Help would be appreciated. Thanks.

I have for sale in new condition a Kenwood TS690SAT 160m through 6m with
general coverage receiver. Comes complete with:

AT-450 internal antenna tuner

TU-8 tone board

PS-53 power supply

YK88SN-1 filter

SP-23 matching speaker

Standard Mic

Factory Service Manual

All boxes and manuals

The radio is in mint condition with no scratches and I'm a non smoker.
Asking 1250.00 shipped in the USA.

Ummm, just because a couple of news servers were misconfigured doesn't
mean it is a valid newsgroup.

r.r.a is *not* a valid USENET newsgroup. You may have a server on your
network which accepts messages to r.r.a, but all that means is the news
admin at the site isn't doing his/her job properly.

Tell your news admin to download a valid list of USENET newsgroups from
ftp.uu.net and fix their active file.

Hi Andrew,
I`ve also seen the output from the unit in Hyperterminal.
I`ve thought of trying to write something but I`ve no idea where to
start, unfortunately my experience in program writing amounts to zero.
Maybe it`s a good time to start !!!
Is there any software out there that will decode the data in Complete
Logger mode, if I could get it into ASCII format I`d try to import it
into Excel.
Surely someone out there has achieved this???
Is there any alternative software out there ??
I believe the info showing the breakdown of the output is on the Peet
Bros. website.

Try the `Customers Corner` section.

73`s,
de Alan. (EI3EBB)

Content-Disposition: inline; filename="www.peetbros.com"

Peet Bros. is a manufacturer of advanced electronic systems to measure such
weather data as: wind speed, wind direction, wind chill, pressure, humidity,
rainfall, and dew point. These affordable, yet accurate, rugged and reliable

systems are used in homes, schools, municipal and emergency service, as well as in many commercial applications otherwise requiring a far more costly system. That's why more and more people are saying:

"Keep a weather eye on Peet Bros."

If you are using Netscape 2.0 or better or Microsoft Explorer, click HERE to load our EASY ACCESS Menu bar at the top!

Welcome and thanks for visiting us today. Whatever prompted your visit, we think you'll be interested in seeing an animation of our exciting new wall display, "The Weather Picture" in What's New, reading The Pick of Our Mail Bag, and learning What the Critics Say.

Above all, we hope you'll spend a few minutes trying our interactive Model 2000 simulator. We think you'll be surprised at how easy it is to display all of today's up-to-the-second key weather data, as well as yesterday's extremes - plus the interesting extremes from a big storm weeks ago - more than 100 vital values in all!

If you'd like an overview of our products, you'll want to look through our Showroom Window. For full product details, system comparison charts, etc., you can step directly Inside Our Showroom. (Please allow us a few moments to open it up.) If you wish, you may look over our price list, or use our NEW On-Line Order Form. Also be sure to check out our FTP area where you can download files and utilities directly to your own PC.

If you're already a customer, you may be particularly interested in our Customer's Corner, where you'll find third party product information, related web sites, technical support.

Customers and potential customers alike may be interested in FAQs, which are also accessible from our Showroom and Customer's Corner.

Finally, if you'd like a little more information about the company, or are a prospective dealer, please plan to spend a few minutes with our president, Bill Peet, in Bill's Office.

Once again, we're glad you're visiting us today.

If the HF ham bands must be converted into a CB type of environment on
the basis that this will 'save' them from seizure by the commercial
interests, I vote for commercialization! If that's the best we can do,
it not only is *not worth doing*, it *SHOULD NOT* be done. Wrong reason,
by a mile and a half.
Officials at all levels know of the history of Ham Radio's performance
when the need was there. We need to make sure they, and their succesors
are not allowed to forget it-or fail to be initially informed, for those
newly situated. PR is a BIG requirement, and the ARRL has historically
been very good at this.
Could 27 Mhz be reallocated? Sure - and if Spread Spectrum is as good
as Stevenson raves, it could not matter who or what was already there,
could it?

GC> We were able to beat back the little LEO threat to 2m, but it was a
close thing.
> I doubt we could have done that without the recent large surge in amateurs
> (primarily code test free Techs) who have increased the usage of that band.

Are you saying that the no-code techs vastly increased the number of
repeaters occupying the 2-meter band? This is news to me. Or did they
just make more fully utilized those repeaters already installed, which
doesn't do much for filling up the wide open spaces.
It is inconceivable that we could ever come close to fully utilizing
the amount of spectrum allocated to us in the VHF/UHF/SHF region, even
if every CBer existant moved there.

GC> We did lose 220-222 MHz (prior to the code test free license)
because we
> couldn't muster enough usage of that band with Novice Enhancement.

Do you really think it would have mattered? I don't, for a minute.

> Numbers do matter, they matter very much.

It's a subjective topic, for sure. What has more clout, numbers of
non-paying users or the big bucks of wealthy potential users? Money is
the only thing that talks louder that numbers in our present political
climate. That's because enough money can generate its own superior
numbers via campaign spending and *spin*.

GC> And as Novice Enhancement
> showed, a license class with a Morse test isn't the way to build numbers
> today.

You're Saying that "no newcomer wants to learn Morse code". Especially
if he is a priori indoctrinated to think it is worse than worthless,
a waste of his time.

> Of course numbers aren't all we can bring to bear in our favor. If we can
> show that we are putting the spectrum to good use, that counts in our favor
> too. Our public service activities garnered the support of the Red Cross, EMAs,
> and the Weather Service for retention of our 2m allocation.

Certainly no disagreement here.

But note well
> that none of those agencies have a use for Morse communicators, so they
> have no incentive to defend bands where Morse is required.

How many levels of redundency can we afford, or will the taxpayers fund?
As one who has experienced the simultaneous failure of both primary and
redundant systems in a serious non-amateur situation, I can see a
possible backup role for Morse in the high-tech age. Also, it will be
some time before modern systems are fully deployed throughout society.
Do we just abandon those without them in the meantime?

> The military has also been a strong supporter of amateur radio as a sharing

Perhaps a primary reason for continuing most of our HF allocations.
>

> And there are other benefits to the military for sharing spectrum with amateurs.

> used to augment their tactical communications systems. Amateurs had developed,
> and developed a market for, that technology, so it was available off the shelf
> when the military had a need for it. It is in the military's interest to have
> sharing partners who develop and deploy systems which may have military
> value.

????? WHERE is all that huge Pentagon budget going?

But it isn't in their interest to foster use of systems which have no
> further military value, hence the recent ban on Morse usage in MARS.

But that doesn't mean that hams should no longer use,or be qualified
to use, Morse. There is a case to be made that since no service but Ham
Radio uses Morse, that is THE reason for mandating continued morse
requirment for HF ham licensees. Should Morse be allowed to simply die
out? It *still* is an eminently useful mode, proven over many decades.
Do you REALLY think it is that useless? Are you REALLY so certain that
technology will see to it that we NEVER again need Morse code?

In that noise environment the best you can do is usually inadequate.
Sounds like the place for Coherent.

Darren:

I know you have the best of intentions.

However, the news (NYC) tonight is reporting a story about an elementary school pupil who was allegedly sodomized on the playground by 4 classmates [no need to be more graphic than that summary, thank you] and the teacher/principal's reported mishandling of the incident, etc. Somehow I don't think this sort of thing is unique to NYC unfortunately. In any event, that's what faculty and school boards and principals have to occupy their time these days, not championing some hobby club or school activity. Heavens, there's so little money for classroom supplies & toilet paper, not to mention band uniforms, basketballs, etc., what makes you think that there are resources for ham radio programs ?

As far as electronics teachers in particular, I think that these are a dying breed. Many schools have eliminated or severely cut back vocational/technical programs like electronics classes. Partly money, and partly because this kind of training is "out of vogue". It's a shame, too --- my HS electronics teacher (more than almost all my other instructors put together) had a very positive influence on me --- I earned a living from electronics, and worked my way through BSEE & MSEE degrees too.

There are exceptions, but I think that your idea is not likely to find widespread adoption.

>It will have *no* bearing on the outcome.

I don't believe that. Do you *really* think that 27 MHz could be reallocated
to another radio service? I don't. And the reason is that there are simply too
many people using it who wouldn't move without a fight. If our amateur
bands had one tenth as much occupancy, they'd be safe too. The one thing
a politician learns early is how to count noses.

Large single issue constituencies have clout, small ones don't. On the national
political level, the threshold number is in the range of 3 million to 5 million
people for issues which aren't otherwise controversial. None of our amateur

bands currently have that level of occupancy, so all of them are at risk.

We were able to beat back the little LEO threat to 2m, but it was a close thing. I doubt we could have done that without the recent large surge in amateurs (primarily code test free Techs) who have increased the usage of that band. We did lose 220-222 MHz (prior to the code test free license) because we couldn't muster enough usage of that band with Novice Enhancement. Numbers do matter, they matter very much. And as Novice Enhancement showed, a license class with a Morse test isn't the way to build numbers today.

Of course numbers aren't all we can bring to bear in our favor. If we can show that we are putting the spectrum to good use, that counts in our favor too. Our public service activities garnered the support of the Red Cross, EMAs, and the Weather Service for retention of our 2m allocation. But note well that none of those agencies have a use for Morse communicators, so they have no incentive to defend bands where Morse is required.

The military has also been a strong supporter of amateur radio as a sharing partner in spectrum where we and the military have overlapping allocations. That's primarily because we can easily be displaced in time of war without an adverse economic impact. Other partners would be less easily displaced without having significant economic impact. (And wars have an economic component which cannot be ignored.)

And there are other benefits to the military for sharing spectrum with amateurs. In the Gulf War, the military was able to buy off the shelf TNCs which they used to augment their tactical communications systems. Amateurs had developed, and developed a market for, that technology, so it was available off the shelf when the military had a need for it. It is in the military's interest to have sharing partners who develop and deploy systems which may have military value. But it isn't in their interest to foster use of systems which have no further military value, hence the recent ban on Morse usage in MARS.

Ironically, it was amateur development of the pacsat which made the little LEO industry possible. They were being short sighted in attempting to take over the very amateur spectrum which had been used to prove out the concepts on which their industry is based. But being short sighted and eating the seed corn is far too typical of industry today.

We can't depend on industry to help us retain our spectrum. Instead we have to go over their heads and show the regulators that our innovations made those industries possible, which is an economic benefit to the nation, so our spectrum should be protected to allow us to generate other innovations which could spawn or advance other industries in the future. Of course if we aren't doing any innovative work, we can't make that claim. There is nothing innovative or of possible use to industry about Morse Code.

On another front, amateurs seem sanguine about retaining HF spectrum. But that isn't a sure thing either. There are a number of entities who are re-examining HF as a low cost way of moving moderate amounts of information over relatively long distances. And pending moves to change

MW and SW broadcasting to digital has the potential to increase demand for MW and SW spectrum from that industry too.

In another irony, VLF access may return to amateur radio. In the US we have long had Part 15 access to the 160-190 kHz spectrum, but several nations have now made the 71-73 kHz spectrum available to their amateurs, and the NTIA has noted a need for such an amateur allocation in the US. VLF has become the domain of low speed digital operation, Morse usage today is virtually nil. There's no good reason for that to change.

The "statistic" is NOT meaningless ... since "Morse is necessary
because it is the most universal mode." argument is one that is
raised by pro-coders so frequently ...

Being able to wave the ARRL's own statistic in their face to show that a large
majority of hams really don't USE Morse (but some till want to use it to keep
others out of "their" bands) illustrates the bogus nature of that argument
in one more way.)

Glen is correct though if he's trying to imply that "preference" and
"popularity" should NOT be and are not valid "reasons" for "justifying"
a pass/fail Morse test which blocks entry to totally unrelated HF privileges.

From: robin2j@aol.com
Message-ID: <19971023051200.BAA00658@ladder02.news.aol.com>
Source record: 188246

I have an Ameco PT-3 Preamp I would like to swap for a modem for internet use. The range of the preamp is 1.8-54 Mhz.It's about 1 1/2 years old and in good condition.I have two of them but need a modem more than I need two preamps.It has a T/R relay to bypass the preamp during transmission and can handle up to 300w input.(put it between your rig and amp of course) Can also be easily modified to use with a seperate receiver or two antennas.I may consider throwing in some other things if the modem is worth it.Prefer external but will consider any kind.
Thanks
Jimmy

Does anyone know of a website where you can get tracking info for RS-12?
I used to get the times of passes from a packet BBS but that bbs is gone now.It
was accurate enough to get the approximate time of the pass and other
necessary info.Don't need too many specifics for mode K (15/10 meters),just
the time it passes.

1342. Code vs. No-Code

Newsgroup: rec.radio.amateur.misc
Date: 1997-10-23 00:00:00 UTC
From: "Dr. Zarkoff" <radioman@writeme.com>
Message-ID: <62mou6$8ec@camel19.mindspring.com>
Source record: 188248

Hello Hams, and aspiring Hams,

I'm kind of new on the newsgroups and Ive been checking out the ham radio newsgroups and I must say Im very disturbed by all the vicious, and slanderous messages people are sending each other debating the merits and the short comings of CW.
Is it really all that important a topic that hopefully otherwise decent people would become so hateful and obsessive when they talk about it? Its not politics or religion folks. Lighten up!

There are a large number of hams who enjoy CW. Great. There are also a large number who prefer ssb. There are a lot of hams who have only sstv stations. Some only do rtty.
Isnt that why its such a great hobby because it is so broad and diverse that there is something of interest for every one?

To the CW crowd I would say dont belittle someone who has decided they want to get one of the new no-code licenses. Welcome them into the hobby. Offer them whatever assistance they need. You might be surprised to discover they are not the monsters you thought they would be. They will bring their individual skills and resources to our hobby to help us all as a whole. Give them a chance. Lets show the new people that we respect their interest and desire to participate in our hobby. Lets lead by example.

To the new no-code crowd I would say welcome to ham radio. Like anything else we have our good and bad element. Try to stay close to the good people and avoid the bad.
Dont be hurt if one of the old timers makes a rude comment about you not knowing the code. The reason some of us older hams feel this way is because for many of us the code is all we have. Its been an instituion, and a proud tradition of ham radio for many years. And we are very proud that we have a skill like CW. Please dont insult us by saying its out dated, and should be done away with.
Try to keep in mind your the new guys on the block. If you want to be accepted into the fold so to speak impress us with your character. Because in the final analysis thats the most important attribute at all.
It doesnt matter if you passed the code test or not. What matters is the kind of human being you are in your heart.

So come fellows please, lets all stop this ridiculous arguing over morse code, and lets live together in peace.

If someone sends you a rude message over the news groups dont reply.
Silence sometimes is louder than the loudest scream!

On the cover of an old Hallicrafters log book there is a great quote that I think about often in my every day affairs. It is as follows:

"Mans desire to communicate still offers our best opportunity to achieve peace on Earth, and goodwill toward all mankind."

If we all tried to make this our creed what a wonderful world this would be.

73 to all!

Dr. Emil P. Zarkoff

>situations, CW still provides a reasonable solution for more than just 'local'
>communications and will continue to do so for the forseeable future.

I've never quite grasped this argument. It seems to me that the
"processing" needed for CW vastly outweighs that needed for most other
modes, simply because that processing needs to be performed by a trained
operator, a rare commodity. I mean, you can train anyone -- including
nonhams -- to operate a voice radio or a portable packet station in a
few minutes (and in a "true" emergency, I'd not hesitate to use any warm
body available if it served the need). Not so for a CW station. And I
can carry a lot more spare radios and accessories than I can carry spare
operators. (They eat less, too -- never overlook logistics!) So while
the equipment for CW is marginally less complex than that for voice,
the *system* isn't simpler because of the need for trained operators.

The related "simple equipment" argument escapes me, too. In an emergency
situation you either have a working radio or you don't. Whether it's a
radio capable of voice or digital operation or a CW-only radio doesn't
change that. And I don't see that using non-CW modes, even "high tech"
modes, necessarily implies needing some infrastructure. (But maybe I
don't know what that term is intended to mean in this context.)

Sure, you can always contrive a scenario where all non-CW options are
eliminated, but I've never heard one that sounded particularly likely.
Not that you shouldn't use CW if it's available and can do the job, but
I find it harder and harder to believe that situations where *only* CW
could be available are likely unless the operator(s) have predetermined
that that's all they'll support. Maybe I'm just missing something.

Of course, I'm no expert in emergency comms. If someone who is such an
expert can provide a clear explanation of why CW is so superior in the
emergency communications environment that the drawback of requiring
trained operators is overcome, I'd appreciate hearing it. (Please, spare

me the "because you can build a CW transmitter from a 2N2222" argument.
It's just silly.)

All hams should read the posting "Code vs No-Code" , dated 12/23/97, by Dr. Zarkoff
If more of us felt like that, this would be a lot better place for hams and non-hams alike.

I should have made it clear that I have no argument with the fact that history has gone in this direction. It is simply a normal function of our economic system and certainly should work that way. Part of our challenge as ham radio operators is to continue to look for ways to assure the survival of the service while promoting technology and keeping true to our charge of providing whatever public service is possible and appropriate.

>
>Jon

Well :-), to take your last comment first, note that I never said anything about CW being 'superior'.. I said that CW can provide a reasonable solution. I didn't even say it was the optimal solution or the only solution.

Note also, that my reference was to "a single operator in a hastily put together emergency center. Often when an emergency hits, a number of elements apply, not the least of which is MURPHY.

One is that you never seem to be in the right place at the right time. By that, I mean that you often don't have ready access to all that hardware that you always expected to use in an emergency situation. You have to make do with what you can lay your hands on in a hurry. This is one of the great strengths of Amateur Radio and it's operators. (Or it's supposed to be). If a tornado takes out the antennas at the local fire station, I can get them back on the air with materials 'on hand'. It's unlikely that their 'dispatcher' could do that.

You can postulate the availablilty of computers, tncs, whatever for your 'portable packett station', but do you carry that in the trunk of your car 100% of the time ? Do you carry a portable power source to run it all for hours, days ? I don't and I don't expect that most hams do either. It's usually home in the basement. When an emergency hits, what's the percentage of time that a. you'll be at home when it happens or b. have time to go home and get the stuff ? Pretty low in my experience. And how many really run "mobile" packet stations on HF ?

Yes, you may be able to train someone to operate a voice radio, in a hurry. I'm not convinced, however, that you can do the same for a packet operator. It's not only understanding the mechanics of operating the station (but even this in incomprehensable to many), but understanding operating procedures, callsigns, figuring out who to talk to and when. Sorting out all of the 'gibberish' (to them) of operating signals, abbreviations, and all the other 'shortcuts' that the other experienced operators on the network will use to save time. You don't get that in 5 minutes, you don't get that in an hour, you only get that from long term training and practice. I sure wouldn't want to trust my life to someone who'd been put down in front of a packet station and given 10 minutes of training and expected to handle life and death traffic.

By 'infrastructure' I meant a couple of things. First, the hardware. I can grab almost any HF radio, any time, and put it on the air for a voice or CW QSO. But if I want to use that same HF radio for a digital mode, I need additional hardware (TNC, Computer). Then I need to be able to hook it all together. I need software for the computer. I need to know how to run that software. I need additional Power at the emergency location (fireline in the middle of a forrest ?) to run that additional hardware. I can't take 'Joe Ham' instant volunteer and sit him/her down in front of the 'station' and say 'here get it on the air and start passing emergency traffic, while I go do something else. I have to spend significant time to help them get it hooked up, and try to train them on the fly to operate it and where/how to find someone to talk to with it. I can't take Joes radio, Bills TNC and Jims computer, in the field, and put to gether a packet station on the fly very easily and maybe not at all (you never have that 'one' connector you need :-). But I can take Joes radio and Jims antenna and get a voice or CW station going.

That moves right into the second infrastructure need. Someone to talk to. With voice modes or CW (I'm talking HF here) I can get an emergency net started almost immediately with stations I'll find on the bands almost any time, any place. To try to pass emergency traffic in a digital mode, you have to have a pre-established network ready to go. If you don't have it, you might spend hours trying to find someone just to establish a QSO with, much less someone who's equipped to handle emergency traffic. This is the 'real world', not someones ideal of how an 'emergency should work'. Sure 'eventually' you can get a digital network running, notify operators of established networks and get them on the air, but when the emergency starts, you need communications NOW, not a few hours from now or tomorrow.

As I said before, Packet is fine in the EOC to talk to other EOCs and fixed locations, but I don't see it as having a significant place in the field except in a very few situations, in longer term emergency operations, at least not right now.

My opinion, Your Milage may Vary.

Hi. I would like to know the freqs of Motorola's "Clearnet" devices.

We are using Motorola's rigs for the school activity, and I am
interested in knowing the operating freqs.

Last time when I had that rig in handy, I tried to check the freqs by
using the freqs counter... but it didn't pick up any signals. The
freqs counter was supposed to pick up anything between 1 - 1300 MHz...
so I was thinking that the clearnet might be using the microwave
band...

The rig looks like a cellular phone. The antenna is also similar to
those of the cells.

Thanks for your help !!!!!!!!!!!!!!

If so, we can count on that aspect of ham radio dying out within
the next 10-20 years. They're over 65, and if the average lifespan of
the human male is 72, we can expect most of them to die in the next
20 years.

Not that I wish anyone any ill will, or hope that anyone dies,
merely making an argument given what's been publicly stated.

So long as nobody comes along and replaces them...

JAPAN.

No coder can use 10W

- Under 8 MHz
- Above 20 MHz - Under 30 MHz

20W for above 30 MHz

Fiji

No coder full access 150W HF

I am making a list of licensing system in the world. I have a list
for Canada + Japan + U.S. at this time at:

>much free time?

IC doesn't offer any radio exams to the people anymore (as of October
15, 1997). The last session of amateur + professional exams were
held two weeks ago.

and to let you know... RICs will be sold from private companies from
April, 1998, meaning no free copies will be available at IC office.
You will have to pay $17.50 + shipping and handling + tax for each
copy. If you have the internet access, you may download the RICs for
free from IC's web site.

for more info, visit

http://www.radiotelephone.net/amateur/

The site also gives you a link to IC amateur site directly.

I will have to contact private examiner... but most of the private
examiners here [Montreal] ... speak francais.

All english speaking examiners live far away from Montreal so I have
to catch the time when they, by chance, come to Montreal.

<little@ameritech.net> writes:

>>> > The *numbers* assertion is just a gambit used in the no-code debate.
>>> >It will have *no* bearing on the outcome.

Todd:

Dick is right...numbers don't mean anything as far as reallocation
threats are concerned. Money is the key. If it all hinged on numbers
and band usage, why, then, the "Little LEO" threat to 2-meters and
440?

>>GC> I don't believe that. Do you *really* think that 27 MHz could be
>>> reallocated
>>> to another radio service? I don't. And the reason is that there are
>simply too
>>> many people using it who wouldn't move without a fight.

If that spectrum were of enough economic value to the new user, he
could afford the "fight."

If our amateur
>>> bands had one tenth as much occupancy, they'd be safe too. The one thing
>>> a politician learns early is how to count noses.
>>>
>>> Large single issue constituencies have clout, small ones don't. On the
>national
>>> political level, the threshold number is in the range of 3 million to 5
>million
>>> people for issues which aren't otherwise controversial. None of our
>amateur
>>> bands currently have that level of occupancy, so all of them are at risk.

No, Todd, it's not numbers, it's money. M-O-N-E-Y. If the ARS were a
multi-billion-dollar a year industry, we'd have considerable "clout" as
well. I'm talking about revenue generated by spectrum usage, not the
money hams spend on things for their own stations. Therefore, it is
impossible for hams to have any financial clout, which is the only kind
that matters.

>>If the HF ham bands must be converted into a CB type of environment on
>>the basis that this will 'save' them from seizure by the commercial
>>interests, I vote for commercialization! If that's the best we can do,
>>it not only is *not worth doing*, it *SHOULD NOT* be done. Wrong reason,
>>by a mile and a half.

I absolutely concur. I'd rather see our bands used wisely and profitably
by commercial interests, than have them trashed in the same manner as
11-meters.

>The only thing that's wrong by a mile and a half or more is the presumption
>that Morse Code testing has anything to do with CB. Your less than
>tacit assumption is that Morse Code testing is what keeps the amateur
>bands from turning into the citizens band. Sorry to tell you, but as
>the technician class license has shown, Morse Code testing isn't
>required to "filter" out the bad apples.

What the no-code Technician class has shown us is the propensity for
ex-CB operators to be attracted to it, bringing their absurd operating
practices along with them! I *do* agree that Morse code testing
doesn't filter out "bad apples," but it does throw up a barrier that keeps
a good deal of them out in the first place. As a general rule, most
people who learn the code for the express purpose of becoming
active CW operators, have no tendency toward CB-like operating
practices on phone.

>>GC> We were able to beat back the little LEO threat to 2m, but it was a
>>close thing.

When did we do that? I thought the Little LEO threat was still very much
alive...

>>Are you saying that the no-code techs vastly increased the number of
>>repeaters occupying the 2-meter band? This is news to me.

I'll tell you one thing...no-code Techs certainly haven't raised the SOTA
of Packet Radio! We're still hand-cranking away at 1200 baud, and I
can still hand-carry an NTS message to it's destinaton faster than I can
get it there via Packet! So much for the no-code Techs raising the
SOTA!

>On what planet do *you* live? There are no free 2 meter repeater pairs
>available in any large metropolitan area. Just how are they going
>to increase the number of repeaters?
>
>> Or did they
>>just make more fully utilized those repeaters already installed, which
>>doesn't do much for filling up the wide open spaces.

They didn't do that either. I still can't call into a repeater in an
unfamiliar
town and get good, reliable highway instructions or emergency
assistance. However, the number of OM/YL QSO's of the "I'll be home
in 5 minutes, do you want me to stop at the store" nature have moved
off the autopatches and are now direct 2-way QSO's between the

OM and the no-clue Tech XYL. Big improvement! At least the other
way, the autopatch got tested regularly!

>> It is inconceivable that we could ever come close to fully utilizing
>>the amount of spectrum allocated to us in the VHF/UHF/SHF region, even
>>if every CBer existant moved there.

I agree...which is why I believe we're going to lose it in big chunks in
the future. And, somehow, it will be blamed on the Morse code
requirements for HF!

>>GC> We did lose 220-222 MHz (prior to the code test free license)
>>because we
>>> couldn't muster enough usage of that band with Novice Enhancement.

Well, what has the no-code Tech license done for > 222-MHz usage?
I originally supported a no-code VHF license which would have
specifically excluded 6- and 2-meters, and given privileges on 220 and
above. That was a proposal which MIGHT have saved 220...but no,
the FCC took the easy way out, and gave away the whole Tech
class, including the most-prized bands, 6 and 2!

>So what *would* matter? If we had as many amateurs as their
>are members of the NRA, you don't think we'd be able to wield
>some clout in Washington? We can barracade ourselves against
>the outside world and lose our allocations, or we can figure
>out ways to make amateur radio attractive to more people.

The only way to increase our numbers to those levels would be to
convert the ARS into a PRS. Ham-ticket-on-the-cereal-box time.

>>> Numbers do matter, they matter very much.
>>
>>It's a subjective topic, for sure. What has more clout, numbers of
>>non-paying users or the big bucks of wealthy potential users? Money is
>>the only thing that talks louder that numbers in our present political
>>climate. That's because enough money can generate its own superior
>>numbers via campaign spending and *spin*.

Where would that money be going? Into the accounts of stockholders of
those who invested in the usage of the amateur spectrum? Or into the
accounts of a relatively few firms who sell equipment to the new, larger
hoardes of ex-Amateur, now Personal radio service "consumers?" No
clout there...

>Given the reneging that is going on with the spectrum auctions and
>the HDTV debacle, supposed wealthy potential users are getting
>a black eye. Several million single issue voters represent a lot of
>power. Ask a campaigner what it costs to secure several million
>sure votes.

What makes you think no-code HF would create "several million"
new hams? My guess is there will be a mass conversion of the

existing no-code Techs to the HF phone segments, but the demand
will die off long before our total numbers even come close to doubling.
They might get up to a single million, but wouldn't ever exceed that
level. And they'd still all be older people, with jobs, who could afford
to buy equipment. The kids will still be glued to the internet.

>>GC> And as Novice Enhancement
>>> showed, a license class with a Morse test isn't the way to build numbers
>>> today.
>>
>>You're Saying that "no newcomer wants to learn Morse code". Especially

You could get around part of the timing issue by using an automatic shutoff charger. You could use the timer to turn it on when you're not using the system, thereby avoiding any RF interference. Or, you could just simply turn it on when you leave, off when you come back. A good automatic charger should shut off or go into a super low current trickle charge that can be left on indefinitely.

The only thing that's wrong by a mile and a half or more is the presumption
that Morse Code testing has anything to do with CB. Your less than
tacit assumption is that Morse Code testing is what keeps the amateur

bands from turning into the citizens band. Sorry to tell you, but as
the technician class license has shown, Morse Code testing isn't
required to "filter" out the bad apples.

>GC> We were able to beat back the little LEO threat to 2m, but it was a

On what planet do *you* live? There are no free 2 meter repeater pairs
available in any large metropolitan area. Just how are they going
to increase the number of repeaters?

> Or did they
>just make more fully utilized those repeaters already installed, which
>doesn't do much for filling up the wide open spaces.

In case you hadn't noticed, there *aren't* any wide open spaces
on 2 meters. What little was left for experimental use has primarily
been filled by things like APRS, uncoordinated repeaters, and
packet. On the other hand, the occupancy of many repeaters
is dismally low. In this area, most are occupied during drive time,
but the rest of the time, only 5-10 repeaters are in use much of
the time.

> It is inconceivable that we could ever come close to fully utilizing
>the amount of spectrum allocated to us in the VHF/UHF/SHF region, even
>if every CBer existant moved there.

What's with your kick on CB radio operators? As far as ever coming
close to filling those allocations, that depends upon what we do
with them. Presently the only thing that comes close to needing
those kinds of allocations are ATV and high speed data. Will
other applications come in the future? I wouldn't bet against it.
Forever is a long time.

>GC> We did lose 220-222 MHz (prior to the code test free license)
>because we
>> couldn't muster enough usage of that band with Novice Enhancement.
>
>Do you really think it would have mattered? I don't, for a minute.

So what *would* matter? If we had as many amateurs as their
are members of the NRA, you don't think we'd be able to wield
some clout in Washington? We can barracade ourselves against
the outside world and lose our allocations, or we can figure
out ways to make amateur radio attractive to more people.

>> Numbers do matter, they matter very much.

Given the reneging that is going on with the spectrum auctions and
the HDTV debacle, supposed wealthy potential users are getting
a black eye. Several million single issue voters represent a lot of
power. Ask a campaigner what it costs to secure several million
sure votes.

>GC> And as Novice Enhancement

>
>You're Saying that "no newcomer wants to learn Morse code". Especially
>if he is a priori indoctrinated to think it is worse than worthless,
>a waste of his time.

Funny, I don't see that in Gary's post at all. I also don't see anyone
saying that it is worse than worthless. On the other hand, it isn't
the paragon of communications it was 70 years ago, and it
requires an inordinate amount of time to master compared to
other things one can do with their precious discretionary time.
Gary's point was that eliminating the code test for the technician
class license brought many people into the service that otherwise
would have stayed away (or did stay away as I had.)

>> But note well
>> that none of those agencies have a use for Morse communicators, so they
>> have no incentive to defend bands where Morse is required.
>
>How many levels of redundency can we afford, or will the taxpayers fund?

>possible backup role for Morse in the high-tech age. Also, it will be
>some time before modern systems are fully deployed throughout society.
>Do we just abandon those without them in the meantime?

Since you are so concerned with potentially saving a life regardless
of the cost, tell me this. Which will save more lives, requiring
amateurs to know Morse Code or requiring them to know CPR?
CPR can be learned in a fraction of the time it takes to master
Morse Code and it saves many lives every single day. When
was the last time Morse Code saved someone's life? How many
lives has Morse Code saved in the last decade?

> But it isn't in their interest to foster use of systems which have no
>> further military value, hence the recent ban on Morse usage in MARS.

This makes no sense at all. We are not the Morse Code Preservation
Service.

>Should Morse be allowed to simply die
>out? It *still* is an eminently useful mode, proven over many decades.
>Do you REALLY think it is that useless? Are you REALLY so certain that
>technology will see to it that we NEVER again need Morse code?

To answer your last question first, yes. Do we need to hand crank
a vehicle? Do we need to dig foundations by hand? Do we need
to know how to chip a piece of stone into an axe? Some skills
and knowledge really are no longer needed. As to your early
questions, if you have such confidence that Morse Code is "eminently
useful" and has a fraction of the accolades you bestow upon it, why
does the government need to require its knowledge? What truly
valuable skill has ever disappeared? It either has the attributes
you claim it has and will therefore remain in usage, or it isn't
"eminently useful" and will go the way of the stone axe.

73,
Todd

1366. AURORA WARNING: Middle Latitude Auroral Activity Warning Issued

Newsgroup: rec.radio.amateur.misc
Date: 1997-10-24 00:00:00 UTC
From: oler@holly.cc.uleth.ca
Message-ID: <62pc9u$87k4@mars.online.uleth.ca>
Source record: 188122
Cross-posted to: rec.radio.amateur.misc,rec.radio.shortwave

/\

MIDDLE LATITUDE AURORAL ACTIVITY WARNING

WARNING ISSUED: 05:15 UTC, 23 OCTOBER

/\

VALID BEGINNING AT: 06:00 UTC ON 24 OCT
VALID UNTIL: 19:00 UTC ON 26 OCT

HIGH RISK PERIOD: 25 OCT (UTC days)
MODERATE RISK PERIOD: 24 - 26 OCT

PREDICTED ACTIVITY INDICES: 10, 15, 30, 20 (23 OCT - 26 OCT)
(INPUT INTO THE PREDICTIVE AURORA SOFTWARE *)

POTENTIAL MAGNITUDE OF MIDDLE LATITUDE AURORAL ACTIVITY: MODERATE

POTENTIAL DURATION OF THIS ACTIVITY: MAIN BELT=12-18 HOURS
MINOR BELT=12-24 HOURS

ESTIMATED OPTIMUM OBSERVING CONDITIONS: NEAR LOCAL MIDNIGHT

EXPECTED LUNAR INTERFERENCE: NIL

OVERALL OPPORTUNITY FOR OBSERVATIONS FROM MIDDLE LATITUDES: FAIR TO GOOD

AURORAL ACTIVITY MAY BE OBSERVED APPROXIMATELY NORTH OF A LINE FROM...

WASHINGTON STATE OR SOUTHERN BRITISH COLUMBIA TO SOUTHERN MONTANA TO
SOUTH DAKOTA TO SOUTHERN MINNESOTA TO WISCONSIN TO MICHIGAN TO
NORTHERN DARK-SKY REGIONS OF NEW YORK STATE TO MAINE. SOME REGIONS
OF NORTHERN OHIO, PENNSYLVANIA, NEW JERSEY, CONNECTICUT, RHODE ISLAND
MASSACHUSETTS AND NEW HAMPSHIRE MAY ALSO OBSERVE PERIODS OF ACTIVITY
FROM DARK-SKY SITES DURING THE SEVERAL HOURS AROUND LOCAL MIDNIGHT IF
SUBSTORMS ARE MORE INTENSE THAN EXPECTED.

ACTIVITY MAY ALSO BE OBSERVED APPROXIMATELY NORTH OF A LINE FROM...

UNITED KINGDOM TO EXTREME NORTHERN COASTAL REGIONS OF BELGIUM AND
NETHERLANDS AND GERMANY, TO SOUTHERN SWEDEN TO SOUTHERN FINLAND AND
NORTHERN RUSSIA. NEW ZEALAND SHOULD OBSERVE SOME ACTIVITY DURING
THIS EVENT AND EXTREME SOUTHERN REGIONS OF AUSTRALIA MAY ALSO OBSERVE
ACTIVITY UNDER DARK SKIES.

* Contact: Oler@Solar.Uleth.CA or COler@Solar.Stanford.Edu for more
information regarding the Auroral Activity Prediction and

Simulation Software.

SYNOPSIS...

Auroral activity is expected to intensify late on 24 October and primarily on 25 October in response to recent coronal mass ejections observed at the Sun. The periods of strongest activity is expected on 25 October and could result in favorable periods of auroral activity over dark-sky middle and high latitude sites. The primary window of opportunity will be approximately 12 to 18 hours long. The geographic regions which are along the local midnight meridian during this period of intensified activity will be the most probable locations to observe visible levels of activity. Auroral activity should begin subsiding late on 25 October and particularly on 26 October. By 27 October, mostly quiet conditions should prevail.

This warning will remain in effect until 19:00 UTC on 26 October. It will then be updated or allowed to expire.

** End of Warning **

1367. WARNING: Potential Geomagnetic Storm Warning Issued

Newsgroup: rec.radio.amateur.misc
Date: 1997-10-24 00:00:00 UTC
From: oler@holly.cc.uleth.ca

POTENTIAL GEOMAGNETIC STORM WARNING

ISSUED: 05:20 UTC, 23 OCTOBER

/\

(See Appended Comments for Synoptic Information)

HIGH RISK PERIOD: 25 OCT (UT days)
MODERATE RISK PERIOD: 24 - 26 OCT

POTENTIAL LOW-MIDDLE LATITUDE STORM INTENSITY: MINOR
POTENTIAL HIGH LATITUDE STORM INTENSITY: STRONG MINOR

POTENTIAL DURATION OF GEOMAGNETIC STORM: APPROX 24 HOURS
DURATION OF MAIN BELT OF ACTIVITY: APPROX 12 TO 18 HOURS

POTENTIAL PEAK LOW-MIDDLE LATITUDE K-INDEX VALUES: 6
POTENTIAL PEAK HIGH LATITUDE K-INDEX VALUES: 8

EXPECTED DOMINATING LOW-MIDDLE LATITUDE K-INDEX: 4 TO 5
EXPECTED DOMINATING HIGH LATITUDE K-INDEX: 5

POTENTIAL FOR LOW LATITUDE HF DEGRADATION: MODERATE
POTENTIAL SEVERITY OF HF DEGRADATION: MINOR
EXPECTED HF PROPAGATION CONDITIONS: GOOD TO OCCASIONALLY FAIR

POTENTIAL FOR MIDDLE LATITUDE HF DEGRADATION: HIGH
POTENTIAL SEVERITY OF HF DEGRADATION: MINOR
EXPECTED HF PROPAGATION CONDITIONS: FAIR TO POOR

POTENTIAL FOR HIGH LATITUDE HF DEGRADATION: HIGH
POTENTIAL SEVERITY OF HF DEGRADATION: STRONG MINOR
EXPECTED HF PROPAGATION CONDITIONS: POOR TO VERY POOR

POTENTIAL RISK FOR GEOSYNCHRONOUS MAGNETOPAUSE CROSSINGS: 35% PROBABLE

SUSPECTED SOURCE OF OBSERVED/EXPECTED ACTIVITY:
Two coronal mass ejections: the first was a partial halo ejection and
therefore may graze the Earth. The second was a complete halo ejection and
has a high probability of impacting with the Earth on 25 October. It is this
latter disturbance that is likely to spawn periods of minor to major
geomagnetic storming (and even perhaps brief severe periods over the high
latitudes).

```

Oh dear!

Yet more pointless awards...

Where's the challenge in this one? A marketing campaign? Spamming? Didn't someone once say the internet is replacing all that is interesting about amateur radio? This is very sad.

I think that this message should have been posted on 1st April...

You are not even allowed to discuss what you have heard on the scanner. Let alone retransmit.

I see the Club Radio Amateur de la Rive Sud de Montr=E9al is having
another of their annual hamfests this year. In year's past, this one
has been well attended, in terms of buyers and sellers.
=20
The information is available in French and English at their website at
http://WWW.CAM.ORG/~ve2clm/

Below is the english version from their website:

Montreal Region

Biggest Hamfest

Sponsored By The

Montreal South-Shore Amateur Radio Club

Saturday October 25th, 1997

From 9 AM To 3 PM

(Vendors From 6 AM)

Place Desaulniers

1023, Blvd Taschereau, Longueuil

Snack Bar on the Site and Free Parking

Fully Accessible To Handicapped Persons

Ham Radio, Computer Fair & Flea Market

KENWOOD STANDARD YAESU ICOM DRAKE

DIAMOND COMET ALINCO RADIO SHACK

Talk-in Freq VE2RSM 145.390- Mhz

Hourly Door Prizes Drawing

Up to 50% savings

(Through sales tax refund & US currency exchange)

Bring the XYL and do some shopping in

Boutiques of the Montreal Area.

Complete your Hamfest day at the Montreal Casino.

Register for your Canadian amateur radio exam with Claudette VE2ECP at

Are you talking about the "Clearnet" PCS mobile phone service in Canda?
Those mobile phones are 1900 Mhz CDMA, and you will not be able to hear
those at all.

Propagation Forecast Bulletin 43 ARLP043
From Tad Cook, K7VVV
Seattle, WA October 24, 1997
To all radio amateurs

SB PROP ARL ARLP043
ARLP043 Propagation de K7VVV

Unfortunately, solar activity is continuing its downward drift, which was unexpected following the recent hopeful signs from solar cycle 23. Average solar flux was off about one point last week referenced to the previous week, and sunspot numbers are down as well. Solar flux on the last four days of this week has been below the average for the previous ninety days, which is never a good sign.

The only consolation has been stable geomagnetic conditions with low K and A indices, but this may change, since on October 21 there was a coronal mass ejection from the Sun. This might produce some unstable conditions for the CQ World Wide DX SSB contest this weekend, but forecasters are not certain.

Based on the 27.5 day solar rotation, solar flux is expected to drift around the low eighties over the next few weeks. On the day that this bulletin was written, the solar flux even dipped just below 80. The solar flux has not been this low in about two months.

Sunspot Numbers for October 16 through 22 were 45, 52, 45, 37, 25, 27 and 13 with a mean of 34.9. 10.7 cm flux was 87.5, 88.2, 86.6, 85.3, 82.8, 85 and 80.7, with a mean of 85.2, and estimated planetary A indices were 3, 5, 3, 3, 6, 4, and 5, with a mean of 4.1.

Try winding a few turns of the cable coax through a ferrite core
(available from radio shack, I believe) or apply a large ferrite
bead (there are some that are split to fit over the wire and have
a snap-shut plastic housing that holds the two halves together around
the wire ... place the ferrite as close to the connector at the TV
end of the cable as possible ... this will tend to block the flow of
currents on the outside of the shield.

Good luck,

FOR SALE: NOS Tubes, test equipment, radios including Hallicrafters, Hammarlund, and Philco, and radio related publications. Schematics for many older radios just $1. Tube Manuals, Tube Substitution books, Service Manuals, QST magazines, much more from the 30's, 40's, 50's, 60's. Now over 1650 different tube types in stock - Contact Rog42@aol.com and ask for an E-mail copy of my latest offerings on RADIO list - #1010-T.

1382. Re: RSGB manual for Canucks

Newsgroup: rec.radio.amateur.misc
Date: 1997-10-24 00:00:00 UTC
From: Michael Black <blackm00@CAM.ORG>
Message-ID: <Pine.GSO.3.94.971024000758.3076A-100000@Ocean.CAM.ORG>
Source record: 188138
Cross-posted to: rec.radio.amateur.homebrew,rec.radio.amateur.misc

I have the RGB VHF manual and "Amateur Radio Techniques" (do new editions of that ever come out?) from about twenty years ago. I've always enjoyed them, and still find them useful. They were different from the ARRL books, beyond the fact that they included tubes after the ARRL books used them only for transmitting. It is good to see things from a different slant.

I have a fifth edition of the RSGB manual. I think I got it less than a decade ago, though from the copyright page it came out in 1982 and would seem to be a more compact version of the issue that came out in two volumes around 1977. This one does have a reprint date of 1986.

It too gives things from a differnt view from the American ham magazines and the ARRL books, and it included tube projects. When someone here recently in rec.radio.amateur.homebrew mentioned G3PDM's advanced hybrid receiver, I was able to go to my RSGB manual and look it up. And yes, it is different from what was being described at the time in the American magazines, and probably some things can be learned from it today.

Whenever I got this RSGB Handbook, it carries a price sticker of $40.34. Expensive, but ARRL books have gotten expensive (especially by the time they land in Canada; I keep putting off buying Wes Hayward's book on RF design).

I got it at an electronic store here in Montreal, North American Electronics. Sadly, when I was past there a few months ago, I discovered that they had closed.

They carried ARRL publications, and I somehow thought they got the RSGB books along with ARRL books.

I don't know where you can get RSGB publications in Canada. There's a hamfest here on Saturday, and I'll keep an eye out. I do note that the RAC website makes no mention of RSGB books (or ARRL publications for that matter), so I guess they only distribute there own.

They do have a list of amateur radio stores in Canada where you can get RAC publications. It's at:
http://www.rac.ca/books.htm
Just scroll down and you'll find the list. Maybe going through the list, including quite a few in Toronto and Ottawa, you can find some store that sells the RSGB books. I couldn't think of any other list of Canadian ham equipment distrubutors, though there must be one somewhere.

Hope this helps.

Only if it is a CDMA receiver equipped with the proper spreading codes.
A narrow IF band scanner will deliver nothing except perceived noise.

Like it or not, we still need to set some conditions for entry into ham radio. Anyone can talk into a microphone or type on a computer keyboard but code requires special skill. So that leaves us with using code as part of licensing requirements and/or make the technical tests much harder.

> use it. Why make someone learn DOS and UNIX when there is Windows and
> Netscape? Think about that next time you log on.......

Because you would have a better understanding of how your OS works. Not to mention that you will need to know how to use DOS to format & partition a messed up hard drive or a new hard drive. Not to mention that there are some excellent DOS programs still around. Some of those DOS programs will work under Windows but the crummy Windows "multitasking" environment makes some DOS programs erratic or cause the computer lock up (see "control-alt-delete" - typical Windows usage).

And the dumbing down of America continues.

FCC ISSUES NEW FORM 610--OLD VERSIONS OBSOLETE

The FCC announced this week that as of January 1, 1998, Amateur Radio applicants may only submit FCC Forms 610, 610 A and 610B that carry an edition date of September 1997. After the first of the new year, previous editions of Form 610 will not be accepted for filing by the FCC or by Volunteer Examiner Coordinators (VECs). Amateurs may begin using the new Form 610s now.

The major change on the new form is a certification that says the applicant has "read and will comply with Section 97.13(c) of the Commission's Rules" regarding RF radiation safety and the amateur service section of OST/OET Bulletin No 65, Evaluating Compliance with FCC-Specified Guidelines for Human Exposure to Radio Frequency Electromagnetic Fields. But, Amateur Radio Supplement B of Bulletin 65, which has additional information on how to conduct a routine RF safety evaluation and explains other aspects of RF

safety, is still in the draft stages and not yet available to the ham radio community.

ARRL Executive Vice President David Sumner, K1ZZ, says the League is concerned that that the new Form 610 could be in the hands of hams before Amateur Radio Supplement B is complete. Sumner says it's essential that the FCC make Supplement B available in time for hams to complete their evaluations to meet the deadlines in the rules.

ARRL Lab Supervisor Ed Hare, W1RFI, who's been involved in reviewing the draft supplement, said he expects the FCC to release it sometime in November. The ARRL will release a book on the new RF safety regulations near the end of the year. "Above all, it is important that the required station evaluation be as easy as possible for hams," Hare said. "The FCC has pretty much met that goal. Additionally, most hams, by virtue of their power levels, will not need to do an evaluation at all."

Section 97.13(c) reads: Before causing or allowing an amateur station to transmit from any place where the operation of the station could cause human exposure to RF electromagnetic field levels in excess of those allowed under 1.1310 of this chapter, the licensee is required to take certain actions.

1. The licensee must perform the routine RF environmental evaluation prescribed by 1.1307(b) of this chapter, if the transmitter PEP exceeds the following limits: 160-40 meters, 500 W; 30 meters, 425 W (legal limit is 200 W--Ed); 20 meters, 225 W; 17 meters, 125 W; 15 meters, 100 W; 12 meters, 75 W; 10 meters, 50 W; VHF (all bands), 50 W; 70 cm, 70 W; 33 cm 150 W; 23 cm, 200 W, 13 cm 250 W, SHF/EHF (all bands) 250 W.

2. If the routine environmental evaluation indicates that the RF electromagnetic fields could exceed the limits contained in 1.1310 of this chapter in accessible areas, the licensee must take action to prevent human exposure to such RF electromagnetic fields. Further information on evaluating compliance with these limits can be found in the FCC's OET Bulletin 65, Evaluating Compliance with FCC-Specified Guidelines for Human Exposure to Radio Frequency Electromagnetic Fields.

The new Forms 610 may be obtained from the FCC' Web site via the Internet at http://www.fcc.gov/formpage.html, at ftp://ftp.fcc.gov/pub/Forms/ or by fax at 202-418-0177 (request index, or for Form 610 use form code 000610, for Form 610A use form code 006101, for Form 610B use form code 006102). The FCC Forms Distribution Center will accept FCC forms orders by calling 800-418-3676.

ARRL VEs and VE teams will be able to obtain a supply of the new Forms 610 in mid to late November--once the ARRL/VEC has had time to obtain a supply of the new forms.

Individual amateurs may obtain a copy of the new Form 610 by sending a self-addressed, stamped envelope (SASE) to: ARRL/VEC, 225 Main St, Newington CT 06111. Include 32 cents postage for each Form 610 requested (this is a four page form).

For general information, contact the FCC, 1270 Fairfield Rd, Gettysburg, PA 17325-7245, or call the FCC's National Call Center at 888-225-5322 (CALL FCC).--FCC

ARRL TO CONTINUE PUSH FOR FEDERAL PREEMPTION

The ARRL Executive Committee has voted to have the League continue to urge adoption of the antenna regulatory preemption policies contained in its petition, RM-8763. The action came on a motion from ARRL Vice President Steve Mendelsohn, W2ML, as the Executive Committee met October 11 in Philadelphia.

The League's petition, filed in February 1996, seeks enhancement of the PRB-1 limited federal preemption of state and local regulation of Amateur Radio antennas. However, the FCC appears to have made no progress with regard to the petition, which asked the FCC to declare that localities must find the least restrictive means to deal with ham radio. Among other things, the petition called on the Commission to amend Section 97.15(e) of the rules to say that any state or local antenna restrictions limiting ham radio antennas to heights below 70 feet would be "presumed unreasonable," unless the state or local authority could show its restrictions were necessary for health, safety or aesthetic reasons.

It was also announced at the Executive Committee meeting that the League will submit comments in Mass Media Bureau Docket 97-182 supporting a comprehensive antenna facilities siting policy, including amateur antenna structures.

The ARRL also continues to pursue FCC preemption of local and state attempts to regulate in the area of RF radiation safety.

The Committee also was told that numerous comments, most of them supportive, were filed on the ARRL's petition (RM-9150) seeking to improve the FCC's handling of private-sector complaints of serious amateur rules violations. The League has filed reply comments in the matter.

In other matters, the Executive Committee

* responded to a request from Southwestern Division Director Fried Heyn, WA6WZO, that the ARRL study a possible expansion of the existing special event call sign program to include call signs other than the 1x1 format now available. ARRL Executive Vice President David Sumner, K1ZZ, told the Committee that demand for 1x1 special event call signs has been low. Just 54 call signs were coordinated during the first six weeks of the new program that lets clubs or individuals reserve 1x1 special event call signs for temporary use via the Internet. Sumner noted, however, that there is some demand for special event call signs outside of the 1x1 block.

* will recommend to the ARRL Board of Directors the creation of the category of International member that would encompass present Associate members who are licensed but are not eligible for Full membership. In addition, the Board will hear a recommendation to have the International Affairs Vice President "bring to the Board the concerns of members in other countries."

* will recommend to the Board that the Technical Excellence Award be renamed the Doug DeMaw Technical Excellence Award, as requested by several members who have earned this award.

* agreed that the League will file in opposition to a waiver request and petition for rulemaking by Sierra Digital Communications Inc. Sierra Digital Communications seeks increased power for its product--an unlicensed point-to-point data communications link operating under Part 15 rules at 24 GHz.

* voted that the President and Executive Vice President shall develop a plan to reinitiate the strategic planning process.

SPUTNIK MODEL LAUNCH NOW SET FOR EARLY NOVEMBER

The latest information about the launch of that working model Sputnik 1 from the Russian Mir space station is that it will take place in early November. According to information received October 17 from Sergei Sambourov, chief of the cosmonaut Amateur Radio department for Russia's Energia space agency, the Sputnik 1 model will be launched November 3 during a spacewalk, although he cautioned that schedule could change. Two identical copies of the model Sputnik, assembled by students in Russia and equipped with a 2-meter transmitter by students in France, now are aboard Mir. They were carried to the space station earlier this month by a Progress supply rocket. Program sponsors initially intended to have the working Sputnik model launched from Mir on October 4, the 40th anniversary of the original Sputnik 1 satellite.

One of the working models of the Sputnik-40, as it's called, is to be hand-released by the Mir crew during the space walk. Latest information indicates the mini-satellite will transmit a "beep-beep" signal on or about 145.82 MHz (FM) from its 200-mW onboard transmitter. The batteries are expected to last a month or two. A QSL card will be available for those who receive the signal.

Guy Pignolet, secretary of the Aero-Club of France and an engineer with the French Space Agency said the project still needs financial support. "We have a lot of unpaid bills (we had to go ahead), and we still need about nine sponsors at $6000 each," Pignolet said. He says the program would very much like to have US companies or even individuals "share the adventure together with the Russian and the French sponsors." A Brazilian company, TECSAT, this week signed on to sponsor the Sputnik 40 Years school satellite program.

For more information, contact Pignolet at 2 place Maurice Quentin, 75039 Paris Cedex 01, France; e-mail pignolet@francenet.fr. For additional details and photos see http://www.oceanes.fr/~fr5fc/spoutnik.html.

4U1WRC TO MARK WRC-97

The International Amateur Radio Club in Geneva will operate 4U1ITU under the call sign 4U1WRC to mark the Radiocommunication Assembly (RA-97) and the World Radiocommunication Conference (WRC-97) that get underway there later this month. A commemorative QSL card will be available for contacts between October 20 and November 21, 1997.

4U1WRC will be operational in all modes, including PACTOR and CLOVER.

4U1ITU is maintained by the IARC for the use and benefit of club members and by other licensed radio amateurs. It's intended "to serve as a model of amateur radio operation at its highest standard." The station is located at ITU headquarters. QSL to IARC, Box 6, CH-1211
Geneva 20, Switzerland.

For more information, see http://www.itu.int/radioclub.--Philippe Capitaine, HB9RKG/IARC

FCC SETS PUERTO RICO RADIO ASTRONOMY COORDINATION ZONE

Ham radio installations will be largely unaffected by a new radio astronomy "coordination zone" that the FCC established late last month in Puerto Rico. The FCC agreed to exclude all amateur stations except new or modified beacon and repeater stations within 10 miles of the Arecibo Radio Astronomy Observatory near Arecibo, Puerto Rico. "We believe that the observatory is a unique scientific tool and find that harmful interference to the observatory's operations is a serious concern," the FCC said in rendering its decision, released October 15.

In comments filed with the Commission, the ARRL and the Puerto Rico Amateur Radio League, had said that including hams in the coordination zone would be inconsistent with the exclusion of CAP repeaters. Both organizations also argued that including some ham operations would "ruin a good informal working relationship between the amateur community and the observatory."

Cornell University, which runs the observatory, requested that new beacons and repeaters should not be exempted because of their interference potential. The FCC concluded that ham beacons and repeaters have a greater potential than CAP or MARS service repeaters and encouraged informal coordination among amateurs and the observatory.

The new rules do not apply to beacons or repeaters operating at 1.2 cm or shorter wavelengths (15 GHz and higher). The rules require new or modified (ie, change in frequency, power, antenna height, or antenna directivity) beacons or repeaters to notify the observatory in writing of the technical parameters of the proposal. The observatory has 20 days to object to the FCC, which will "consider all aspects of the problem and take whatever action is deemed appropriate."--FCC

FCC SEQUENTIAL CALL SIGN UPDATE (View with nonproportional font!)

KB7LPW GIVES UP HAM SHOW FOR PING PONG

Len Winkler, KB7LPW, says he's giving up his weekly Ham Radio & More radio program to concentrate on his new table tennis club in Phoenix, appropriately called Table Tennis & More. "October 26 will be the final live Show for Ham Radio & More," Winkler announced recently, citing "the lack of financial sponsors" for his decision. "I wish the best to Amateur Radio and will continue to enjoy using the bands and the excitement it creates."

Winkler, who has sounded the death knell for HR&M before, is sticking to his October 26 sign-off date "unless a minor miracle occurs by then, which I am not pursuing." The Ham Radio & More Show was on the air for nearly seven years. For much of that time, the program was syndicated by KFNN--a Phoenix AM station--to local broadcast outlets. More recently, it has been available only via shortwave broadcaster WWCR and via RealAudio on the Internet.

Winkler says table tennis has always been one of his passions and he recently opened up his public club and pro shop in Phoenix. "It will take time to build, but I really enjoy playing and coaching," he said.

For more information, see http://www.goodnet.com/~lenwink/ttm.htm.

AMSAT-NA BOARD OF DIRECTORS MEETS, ELECTS OFFICERS

Bill Tynan, W3XO, will continue as president of AMSAT-NA for another year. Tynan was re-elected during a meeting of the AMSAT-NA Board of Directors during the recent 1997 AMSAT-NA Annual Meeting and Space Symposium in Toronto, Ontario. Also re-elected was Executive Vice President Keith Baker, KB1SF, and Vice President, Operations Keith Pugh, W5IU. Stan Wood, WA4NFY, succeeds Dick Jansson, WD4FAB, as vice president, engineering . Jansson had previously indicated he intended to step down but has agreed to complete all of the remaining engineering tasks on his schedule up through and including the launch of Phase 3D. Martha Saragovitz was elected secretary.

The Board named Perry Klein, W3PK, as founding president emeritus. He joins Tom Clark, W3IWI, as an AMSAT-NA president emeritus.

Newly elected board members Joe Holman, AD7D, and Wood joined their colleagues Clark, Tynan, Baker, Dick Daniels, W4PUJ, and Andy MacAllister, W5ACM during the meetings October 19 and 20. Wood and Phase 3D Integration Laboratory Manager Lou McFadin, W5DID, presented a complete rundown of the status of the Phase 3D spacecraft. Significant progress has been made on upgrading the spacecraft structure since last summer, and those structural modifications are now nearing completion. While work on several systems remains, the spacecraft is becoming flight-ready.

The Board also agreed--in cooperation with Tucson Amateur Packet Radio (TAPR)--to help an ongoing effort to minimize the impact of moving current APRS users off 145.79 MHz. The Board agreed to donate up to $500 to help defray needed expenses of various fixed-frequency APRS node operators to find new homes for their operations. If it proves acceptable to the APRS community, the frequency shift would contribute to an effort to clear 145.80 MHz for worldwide use by Mir, SAREX and the International Space Station.

Tynan also welcomed former ARRL New England Director Bill Burden, WB1BRE, as AMSAT-NA's new vice president for strategic planning. "Bill brings a wealth of experience in both engineering project management as well as in planning corporate strategic initiatives to the AMSAT team," AMSAT-NA said in a news release. "His skill and experience will prove invaluable as AMSAT contemplates future projects beyond Phase 3D."

The board also selected a team headed by AMSAT Journal Editor Russ Tillman, KC5JVB, to host next year's AMSAT Annual Meeting and Space Symposium in Vicksburg, Mississippi. The date for that convention has not been set.

Details of the Ontario meeting and conference proceedings will appear in an upcoming edition of AMSAT Journal.--AMSAT News Service/Keith Baker, KB1SF

SOLAR UPDATE

Solar seer Tad Cook, K7VVV Seattle, Washington, reports: Unfortunately, solar activity is continuing a downward drift, which was unexpected following the recent hopeful signs from solar cycle 23. Average solar flux was off about one point last week referenced to the previous week, and sunspot numbers are down as well.

Solar flux on the last four days of this week has been below the average for the previous 90 days--never a good sign. The only consolation has been stable geomagnetic conditions with low K and A indices, but this may change, since on Tuesday there was a coronal mass ejection from the Sun. This might produce some unstable conditions for the CQ WW contest this weekend, but forecasters are not certain. Based on the 27.5 day solar rotation, solar flux is expected to drift around the low 80s over the next few weeks. On the day that this bulletin was written, the solar flux even dipped just below 80. The solar flux has not been this low in about two months.

Sunspot numbers for October 16 through 22 were 45, 52, 45, 37, 25, 27 and 13 with a mean of 34.9. The 10.7-cm flux was 87.5, 88.2, 86.6, 85.3, 82.8, 85 and 80.7, with a mean of 85.2, and estimated planetary A indices were 3, 5, 3, 3, 6, 4, and 5, with a mean of 4.1.

Contesters: Here's additional information from the University of Lethbridge, provided by Cary Oler, relating to coronal mass ejections from the sun during the past week:

HF propagation conditions were normal over the last 24 hours. Approximately one more day of near-normal propagation is expected to dominate before conditions become more disturbed. HF propagation conditions are expected to become degraded on October 25 and 26 in response to the arrival of several coronal mass ejections observed over the last three to four days.

Night-sector transpolar and transauroral circuits are expected to be the most heavily impacted, with periods of poor to very poor propagation expected in response to strong fading, multipathing and enhanced absorption levels. There will also be a chance for VHF backscatter-type communications during disturbed intervals. There may be an interval of approximately 12 to 18 hours after the arrival of the main disturbance on October 25 where activity may appear to improve, but this is expected to be fairly short-lived as the latest observed coronal mass ejection impacts the Earth and poor propagation resumes over these middle and high latitude circuits. No significant improvements are expected until October 27 or 28--barring further solar outbursts.

ROBERT M. MORRIS, W2LV, SK

Inventor, researcher and radio pioneer Bob Morris, W2LV, of Sparta, New Jersey, died October 15. He was 95. Morris was first licensed in 1922 as 2CQZ. He became 2LV (later W2LV) in the late 1920s. Early in his amateur career, Morris' 2CQZ (running a spark gap transmitter) was among the stations heard in Great Britain and in Europe during the ARRL's Third Transatlantic Tests (see QST, Feb 1923). He later worked with Edwin H. Armstrong, the man credited with inventing FM, and he is credited with developing FM radio as well as VU meters and early TV standards. He retired in 1966 after a 42-year career as an inventor, researcher, and broadcast engineer.

Among other citations, he received the Engineering Achievement award from the National Association of Broadcasters and the Jack Poppele Award from the Radio Club of America. A noted broadcasting historian and storyteller, Morris appeared in Ken Burns' documentary Empire of the Air--the Men who Made Radio. He was a member of the ARRL for 75 years, a founding member of the Antique Wireless Association and of the New Jersey DX Association, and a member of the Sussex County Amateur Radio Club.

Survivors include his wife, Dorothy, a son and daughter, and several grandchildren and great-grandchildren.

Services were October 18. The family has asked that donations in Bob Morris' memory be made to the Antique Wireless Association, c/o Dexter Deeley, Treasurer, 8 Briar Cir, Rochester, NY 14618.--thanks to Deb McKay, N2TTP

IN BRIEF:

* This weekend on the radio: One of the big ones, the CQ WW DX Contest (SSB), is on tap, plus the Ten-Ten International Net Fall CW Contest. See October QST, page 107, for details.

* Mir PMS is QRX: Because of his heavy workload aboard Mir, US astronaut Dave Wolf, KC5VPF, has not had any spare time to read or respond to the mail on the Mir's packet system (PMS or personal message system). The packet mailbox is full, however, so Wolf has shut down the packet system until he has some spare time to read and respond to the mail there. He expects to be back on the air soon.--Miles Mann, WF1F

* ARRL debuts 160-meter book: The ARRL will introduce DXing on the Edge--the Thrill of 160 Meters, by Jeff Briggs, K1ZM, in late November. DXing on the Edge gives an insider's view at what it takes to make it on 160 meters and includes lots of interesting Topband history. See http://www.arrl.org/catalog/6354/ for a preview and ordering details.

* W3XO elected Radio Club of America fellow: AMSAT-NA President Bill Tynan, W3XO, has been elected a fellow of the Radio Club of America. He's scheduled to receive his award at the club's annual dinner on November 21 in New York. The Radio Club of America, founded January 2, 1909, is the world's oldest radio communications society. The Club provides grants in aid to educational institutions and other worthy causes related to radio communications, as well as sponsoring technical meetings and publishing a journal, Proceedings.--AMSAT News Service/Ray Soifer, W2RS

* Congratulations! Joseph L. Simon III, KF6ACO, of Alamo, California, passed his Extra class exam this week. His upgrade was issued the day before he turned 11!

* First China-EME QSO: BY1QH, the Tsinghua University Amateur Radio Club station in Beijing, made three successful EME QSOs last weekend, October 18. So says David Zhang, the club's president and a third-year engineering student. BY1QH was running 200 W into a 36-element antenna. Zhang says the group got major technical assistance from Lars, SM0KAK, who currently works and lives in the Chinese capital. When all was said and done, BY1QH had worked three stations in Sweden.--Rick Niu, BD1QL via Moon-Net

* NYC Marathon volunteers sought: The New York City Marathon is an annual event that affords Amateur Radio operators a chance to provide a needed public service. Every year in November, approximately 4000 runners embark on a 26-mile run. This year's event, held on November 2, will need at least 400 communicators. You'll need a dual-band (2 meters/70 cm) hand-held transceiver. Interested volunteers should contact Steve Mendelsohn, W2ML, at w2ml@arrl.org as soon as possible. The message subject should be "Marathon Volunteer." The message body should include your name, address, area code and phone number, your call sign, and your T-shirt size. All who volunteer will receive a phone call and a marathon packet that includes all the needed official items. Your role will be explained to you, and you will receive everything you will need to gain access to your post in the race.--The Hudson Loop

==========

The ARRL Letter is published by the American Radio Relay League, 225 Main St, Newington, CT 06111; tel 860-594-0200; fax 860-594-0259. Rodney J. Stafford, KB6ZV, President; David Sumner, K1ZZ, Executive Vice President.

Circulation, Kathy Capodicasa, N1GZO, e-mail kcapodicasa@arrl.org.
Editorial, Rick Lindquist, N1RL, e-mail elindquist@arrl.org.

Visit the ARRLWeb page at http://www.arrl.org.

The purpose of The ARRL Letter is to provide the essential news of interest to active, organizationally minded radio amateurs faster than it can be disseminated by our official journal, QST. We strive to be fast, accurate and readable in our reporting.

Material from The ARRL Letter may be reproduced in whole or in part, in any form, including photoreproduction and electronic databanks, provided that credit is given to The ARRL Letter and The American Radio Relay League.

How to Get The ARRL Letter:

The ARRL Letter is distributed directly from ARRL HQ only to elected League officials and certain ARRL appointees and to paid subscribers of the now-defunct hard-copy edition of The ARRL Letter. For members and nonmembers alike, The ARRL Letter is available free of charge from these sources:

* The ARRLWeb page (http://www.arrl.org/arrlletter/). This version of The ARRL Letter includes any photographs. (NOTE: The ARRL Letter will be posted as soon as possible after publication. Please be patient.)

* The HIRAM BBS: 860-594-0306. (NOTE: The ARRL Letter should be available via the HIRAM BBS no later than the Monday after the date of publication.)

* The ARRL Technical Information Server (InfoServer): Send an e-mail message to info@arrl.org. The subject line should be blank. In the message body, type "send ltrmmdd.txt", where mm represents two digits for the month and dd represents two digits for the day (The ARRL Letter is published every Friday). For example, to request The ARRL Letter file for Friday, January 3, 1997, you'd type "send ltr0103.txt". Then, on a separate line, type "quit". (NOTE: The ARRL Letter should be available via the InfoServer no later than the Monday after the date of publication.)

* The Netcom server, run by the Boston Amateur Radio Club and Mike Ardai, N1IST: Send e-mail to listserv@netcom.com (no subject needed). The body of the message should say "subscribe letter-list".

* CompuServe and America Online subscribers, as a downloadable text file in the services' ham radio libraries.

> sigh..... I hope I can get some converters or something...

You're not listening to what people are trying to tell you. Let me try ----

It is not a simple matter of procuring a "converter" which are typically (in an RF sense) straightforward local oscillator(s), mixer(s) and filter(s) to shift the incoming signal's frequency into your existing receiver's input frequency range. That alone will not allow you to listen to the transmitted signal.

The Clearnet system sounds like it is fundamentally different than a traditional analog (i.e., AM/FM/SSB/etc.) receiver with its envelope/product/ratio/discriminator/whatever demodulation of the IF 'directly' into baseband audio. Instead it seems like it is a *digital* system, using digitized samples of audio transmitted with a CDMA 'spreading' scheme. Two different animals entirely....any 'converter' would (at best) demodulate the incoming CDMA signals into audio only to remodulate it onto an FM (for example) carrier at 150 MHz for your existing receiver to knock back down to 10.7 MHz, 455 kHz. etc. before passing it through the FM detector and into the speaker. Rather a roundabout way to go, even if it were available 'off the shelf'.

Take a deep breath, and think about this stuff. It all makes sense if you understand the principles behind it.

> Like it or not, we still need to set some conditions for entry into ham
> radio.

I think this is at the very heart of the controversy. Why do we *need* to do this ? Because

1) it is somehow "good" for the hobby, or
2) it makes the current participants feel more important, worthy, special, etc. ?

Which is it ? I believe that most of the CW skill testing supporters are driven ultimately by #2, even though many think (to one degree or another) of #1 as justification. In any case, the downside to required CW testing [deterrence of new hams, etc.] which *is* demonstrable & measurable seems to outweigh any dubious gains from 'entry filtering' or 'firewall' functionality.

Not that there is anything particularly wrong with #2 as a rationale (it is normal to want to feel special in any relationship), but people should be honest about it instead of hiding behind specious arguments in the name of #1. Once this happens, the debate can move beyond the current wheel spinning.

Don't feel bad... I am with you on the IE 4.0 !! Had to strip 95 and reinstall the whole mess..... Not a hell of a big job, having done it many times since I've started with 95, but a bug somewhere must be swatted !! I do like 4.0 , but it is a memory pig !!! Had 427 meg on drive before install..... Did install and ran for a few hours... looked at the drive for some other reason and found 4.0 .... yes only 4 meg left !!!

A real memory pig.. 400 meg !!

To all radio amateurs

SB SPCL ARL ARLX019
ARLX019 Robert M. Morris, W2LV, SK

Inventor, researcher and radio pioneer Bob Morris, W2LV, of Sparta, New Jersey, died October 15. He was 95. Morris was first licensed in 1922 as 2CQZ. He became 2LV (later W2LV) in the late 1920s. Early in his amateur career, Morris' 2CQZ (running a spark gap transmitter) was among the stations heard in Great Britain and in Europe during the ARRL's Third Transatlantic Tests. He later worked with Edwin H. Armstrong, the man credited with inventing FM. Morris retired in 1966 after a 42-year career as an inventor, researcher, and broadcast engineer.

A noted broadcasting historian and storyteller, Morris appeared in Ken Burns' PBS documentary Empire of the Air--the Men who Made Radio. He was a member of the ARRL for 75 years, a founding member of the Antique Wireless Association and of the New Jersey DX Association, and a member of the Sussex County Amateur Radio Club.

Survivors include his wife, Dorothy, a son and daughter, and several grandchildren and great-grandchildren.

Services were October 18. The family has asked that donations in Bob Morris' memory be made to the Antique Wireless Association, c/o Dexter Deeley, Treasurer, 8 Briar Cir, Rochester, NY 14618.

> 440?

Because we are the only smallest, weakest user group anywhere in the
VHF/UHF spectrum with enough spectrum to bother with. We are, at the
same time, also using our spectrum (at HF, as well as VHF/UHF) the least
and least efficiently of any other user group.

You seem to think that "our numbers are big" and "our bands are heavily
utilized" ... both assumptions are totally false. There are many, many
millions of stations licensed in the business, industrial, and government
bands adjacent to 2m and 440 ... we are piss ants standing in the midst of
the elephant herd ... and *you* (Larry) seem unable to recognize the danger
of being stepped on.

"Mr. Hospitality" struts out his "Hi, this is ham radio, welcome
aboard" stuff again, huh? (NOT) ... I sincerely hope that any would-be
hams have enough good sense to ignore Larry's bigoted "Go away and
leave *MY* bands all for me!" stuff ...

You're right. It is a lot harder to take over a band occupied by
several million people versus several hundred thousand.

However, the codeless HF proposal will not yield us several million
new hams. At best we might see a doubling of the existing tech class.
We *WILL* see virtually every ham go from whatever license they hold
now to "Codeless Extra" within a year, given the same theory examination
structure we have today.

>>The only way to increase our numbers to those levels would be to
>>convert the ARS into a PRS.
>
>That's already happening, and will happen even more in the future.
>You might as well adapt to it, or get another hobby. If it's done
>properly, I see it as a very positive thing.

Not according to amateur radio purists. And, to some extent, I agree
with them. We justify our existance from both a technical and service
bent. Technical experimentation will not occur in a PCS-type service.
Service (emergency comm, public service, etc.) *MAY* continue, but PCS
is about low-cost, convenient comms -- people looking to be able to
"call hubby to tell him to pick up groceries on the way home" --
there is no reason to expect these people to participate in public
service activities.

Thus, the PCSization of amateur radio will, ultimately, determine
its death far faster than any "morse code test" for HF privs ever
will.

GREAT SOUTH BAY AMATEUR RADIO CLUB

LONG ISLAND HAMFEST-COMPUTER SHOW - OCTOBER 26, 1997

LINDENHURST, LI - NY

On October 26, 1997 the Great South Bay Amateur Radio Club will again sponsor an indoor Hamfest-Computer Show. The location will be at the Knights of Columbus Hall located at 400 South Broadway, Lindenhurst, NY.

ARRL Approved.

There will be radio equipment, electronic componets, computers and access-ories, softeware, books, technical manulas, ARRL information, Amateur Radio License Exams and information. General admission is $ 6.00. $5.00 with coupon. (coupons available at the door)

For exam candidates please remember to bring your original FCC Amateur Radio license (if licensed), any C.S.C.E. forms that are pending, plus a photocopy of each, pens, calculator, formal form of ID (preferably photo ID), and the examination fee, to the exam seesion. 1996 ARRL/VEC fee is $ 6.25,
exact change is appreciated. Novice exams are free.

The VE team is from ISLIP ARES Group and GSBARC. Thanks guys.
For vendor and additional information pleas contact, Walter Wenzel KA2RGI at (516)957-0218, or Tom Carrubba KA2D at (516)422-9594 during EVENING HOURS ONLY (7PM-10PM). NO TABLES WILL BE RESERVED WITHOUT PRIOR PAYMENT due to the limited space available. Tables are 2.5ft x 6ft.

Talk-in will be via GSBARC Repeaters on 146.685 4Z(136.5) PL and 223.86 OC. Food Service during the Hamfest will be provided by members of the Knights of Columbus Council.

Information is also available during the GSBARC 2 meter info net every Monday evening at 7:00 pm on the W2GSB repeater, 146.685 -600 4Z(136.5) PL required. You may also write to:
Great South Bay ARC

I collect early microcomputers. I would like to own an
Apple 1 motherboard. They are difficult to find and I am
willing to pay good for one. If you have one and might be willing
to sell it, please email me. I have a very
nice Altair 8800 that I can throw into the deal if you are interested
in getting one of those.

Thanks,

BOB

> etc. It's similiar to the WOG (written only general) proposal except a
> lot more technically difficult and demanding of effort and commitment.

Cecil ... the "WOG deal" proposed by Len Winkler involved passing all
of the written elements through extra class and getting *only* general
class privileges in exchange. That is WHY I opposed the idea. To me,
the concept still gave FAR too much importance to Morse ability and FAR
too little importance to the technical knowledge necessary to pass those
tests.

I think the whole point that needs to be kept in focus is that the
technical knowledge/skills are the important part and that Morse needs
to be de-emphasized to align ham radio with the world we live in.

This still leaves anyone who chooses to do so free to use Morse ANYWHERE
in the ham bands ...

> IMO someone who knows how to program a Pentium(R)MMX(R) to send/receive
> CCW at 50wpm (in addition to all the other digital modes) is more
> valuable to the ARS than someone who can only send/receive 13wpm
> by hand/ear.

Anyone with any modern technical skills is more valuable to ham radio
(including as an emergency communicator) than a whole handful of technical
idiots who cam beep ... none of the "customers" for emergency/public
service communications wants Morse at all any more.

That's the problem ... the beepers can't face/accept the fact that their
beeping skills are no longer needed or important, so they feel compelled
to maintain the hazing ritual and keep out anyone who doesn't bow to their
idol. I guess that, in their minds, at least, that somehow maintains the
illusion "importance" that they insist on attributing to OOK Morse.

The RSGB manuals are very expensive, last check for the
microwave manuals at about $70.00 CDN. The ARRL
books are a far better value.

If you are uncertain where or not cw proficiency builds operating competence, listen in on a 'phone net. And then, get a ham to sit next to you and translate a cw net for you; you won't even recognise that they are the same service.
You might even tune some general ssb rag chews. I am certain that you'll find many discussions about health concerns. What do you expect older people to have as a common concern? While doing your general listening, be sure to include 14.313mHz and 3.950mHz. Then, go down and listen to the general run of cw QSO's. I warrant that you won't find the same filthy language in use.
To be sure, no-code licenses are not new to ham radio. In days past they were called "Conditionals." Just for kicks, take out an old callbook and select 20 or so "C" class licenses. Then, check an up-to-date directory, and you know what? When I did that very same thing I found NOT ONE "C" that had up-graded to a class that required a cw exam. Of course, now the trick is to get a waiver. I can imagine how many waivered extras, who get their waiver due to a condition that prevents them from concentrating, drive their 3,000lbs. vehicle to and from the testing location!

I have an opportunity to buy a UHF UnidenForce repeater Model ARU-251.
Unfortunately, it does not have anay docs with it and don't even know the
power output (although I suspect 25 watts).

I would be happy to pay for a photoopy of the service manual/schematics as
niden no longer stocks the manual. I'll also pay for the programmer for
this unit too.

In advance, I appreciate any and all help onthis unit.

Roger:

Nicely said, we need a big dose of good sense and courtesy in ham radio these days!

The "elmers" who came along side me over the years were what made the hobby worthwhile, I learned a lot, and was actually able to share something of value in return ... very occasionally! So many wonderful stories! :-)

The willingness of so many to help one another has been a model for healthy community, it is a shame when a selfish few hurt that community.

It would perhaps be a valuable contest (what, another contest?) to see how many fellow hams one could get to send a qsl stating a specific new thing learned and welcome extended to them by the contesting ham - a Community & Courtesy Contest!

I don't know about that; the RSGB books seem to be written for a more technical audience (certainly a more numerate audience) and often go into detail that the ARRL books omit. Now, I'm not dumping on the ARRL; their stuff is very practical and useful. But the GSGB puts more emphasis on theory, and there's a place for that too. I buy from both organizations and consider them complementary.

Depends on where you buy them. I bought the previous issue of the
VHF/UHF manual from a local ham store for about $70. But I think
Norham sells it for $40. That's in the same price range as the
ARRL publications.

Also, the RSGB books seem to include a lot more detail than the
ARRL ones, and they assume that the reader knows more.

I find that there is often a large gap between where the information
in the ARRL publications end and university-level textbooks begin.
The RSGB books fall nicely into that gap.

Dave

1415. FS : ALINCO DJ - G5 TH dual band HT

SILENT KEY

Cec Healey VK2COH passed away in Westmead Hospital on Thursday 23rd October. A member of f the WIA for over thirty years, he was a founder member of the Blue Mountains Branch of the WIA, which later became the Blue Mountains Amateur Radio Club, and also a member of the Chifley Amateur Radio Club. He served on the Committee of the BMARC many times. A keen home-brewer, he will be greatly missed by his many friends.

He is survived by his wife Evelyn, his three children Paul, Robyn and Cheryl, and their families. The funeral will be at the Funeral Chapel, corner Station Street & Henry Street at 10. am next Friday, 31st October, and afterwards at Kingswood cemetary.

Vale, Cec Healey VK2CO

DIVISIONAL NEWS

AFFILIATED CLUBS CONFERENCE

The next conference of affiliated Clubs will be held at Amateur Radio House on Saturday 15th November. Registration of Delegates and notice of questions and other agenda items are all required by 31st October, so that catering arrangements can be finalised, and so that Bill Vlies, manager of the ACA, who will be attending, can give informed answers to any questions he may have on notice.

The next Affiliated Clubs Net will be held on Sunday 2nd November at 09.00 on 80 metres.

-- submitted by Ken Westerman - Affiliated Clubs Officer

EXAMINATIONS

The Divisional examinations are on today at Amateur Radio House Parramatta. Candidates who have lodged applications are requested to report at 12 noon, and the exams will start as soon after that time as possible, but no later than 12.30 pm.

-- Eric VK2EFY, Divisional Secretary

DURAL COMMITTEE MEETING

A reminder that the next Dural Technical Committe meeting will be held following the morning callbacks on Sunday the 9th November.
--Tim VK2ZTM

WICEN NEWS

The WICEN calendar is starting to look somewhat thin; is nothing planned for next year?

WICEN has been asked to provide radio communications for the "Ironman Australia" Forster-Tuncurry half triathlon, to be held on Sunday 23rd November. The event coordinator for this exercise is Steve Pettet VK2KXQ, to whom all enquiries should be directed, via telephone on (02) 6555-3177, or packet radio as VK2KXQ at VK2EO. The briefing for this event will be around 6pm on Saturday 22nd November, at the Forster Beach Surf Club.

WICEN is always looking for members to provide the community with communications assistance. Write to WICEN (NSW) Inc, PO Box 123, St Leonards 2065 for further information, or come up on one of the WICEN nets: Northern Rivers each Tuesday at 8pm around 3610 kHz on odd Tuesdays and the Lismore repeater 6800 on even Tuesdays, Hunter each Wednesday at 7.30pm on the Newcastle repeater 6975, and Central Coast each Thursday at 8.30pm on the Wyong repeater 7125. If any region has any news or information they would like published, then please contact the Publicity Officer. If further information about WICEN (NSW) is required, please contact the acting State Coordinator, Alan VK2YYJ, on the WICEN mobile telephone, 015-097-217.

A mailing list for those interested in WICEN is available; just send the command "subscribe wicen your-email-address" to the address "majordomo@marconi.mpce.mq.edu.au", and you will receive further information. WICEN (NSW) also has a Web page, and the Uniform Resource Locator is: "http://www.nsw.wicen.org.au/". These are generously provided by the Macquarie University School of Mathematics Physics Computing and Electronics.

-- Dave Horsfall VK2KFU, President, WICEN (NSW) Inc.

TELSTRA OPEN DAY

An open day is being held today in Sydney at the Telstra Earth station at Oxford Falls between 10 am and 4 pm. The site can be accessed from the Wakehurst Parkway via the Middle Creek crossing on Oxford Falls Road. The Telstra site is the western of the two earth station installations. On the other side of the road is an Optus installation. The

times again, 10 am to 4 pm today.

DX REPORT

A number of DX stations are active this weekend in the CQ WW DX SSB contest.

ITU HEADQUARTERS - The International Amateur Radio Club will activate 4U1WRC until November 21, 1997. This operation is in conjunction with the 1997 World Radiocommunication Conference and associated 1997 Radiocommunication Assembly.

BURUNDI - Alex PA3DZN will be active possibly using the callsign 9U2L. His expected stay is three months.

URUGUAY - A number of Uruguayan operators will be on-air as CW1D from Flores Island, IOTA SA-030, until October 30. Activity in the CQ WW DX SSB contest is also expected.

CANARY ISLANDS - Martti OH2BH is active as EA8BH for the CQ WW DX SSB contest this weekend. He is employing some new operating technology in this contest.

FRENCH POLYNESIA - Members from the Southern California DX Club will be on Bora Bora, operating as FO8DX until October 28. They will be a Multi Single entry in the contest. Before and after the contest, operators will be active with individual FO calls.

GUANTANAMO BAY - Members from the Central Florida DX Association are active as KG4QD as a Multi Single entry in the CQ WW DX SSB contest. During non contest periods, team members will operate primarily on the newer bands. Some 6 meter activity is also expected.

GUAM - Members of the Guam Contest Clubare active as NH2C as a Multi Single entry in the contest.

ANTIGUA - Members from Team Antigua signing V26B are active as a Multi Operator, Multi Transmitter entry in the CQ WW DX SSB Contest. Operations are expected on all HF bands, including the newer bands and 160 meters. Some RTTY operation is expected as well.

CHATMAN ISLAND - A team of operators from New Zealand are also active as ZM7A in the contest. ZL7AA will be used a few days after the contest.

QSL BUREAU ADDRESS CHANGE - The new address for the Iranian QSL Bureau is, Director General of Telecommunications, Ministry of P.T.T., Dr. Shariati Avenue, PO Box 11365-931, Postal Code 16314, Iran.

--ARRL DX Bulletin 45, dated 23 October, 1997

SPACE NEWS
"SLAY MISTI FOR ME"?

"Washington: In a controversial test that offers new proof of the vulnerability of the world's growing fleet of government and commercial satellites, a ground-based army laser has struck a satellite orbiting 415 kilmoetres above the Earth.

"Pentagon officials said that after two false starts in recent weeks, the two-metre-wide infrared beam of the huge Miracl [sic] laser had struck the military's MISTI-3 as it appeared on the horizon last Friday evening.

"Critics say other nations may see the tests as a sign that the United States intends to develop anti-satellite weapons, setting off a new arms race in space.

"Pentagon officials said the test was defensive, aimed at gathering data on the vulnerability of the US satellite fleet. The US had good reason to eplore these risks, they said, because other countries, including Russia, China and several Western industrialised nations, had laser capabilities."

--Los Angeles Times, via the Sydney Morning Herald (22/10/97)

(We sincerely hope that such weapons will never be used on Amateur satellites...)

CLUB NEWS

WESTLAKES AMATEUR RADIO CLUB WILL HOLD ITS ANNUAL FIELD DAY ON SUNDAY 2ND NOVEMBER 1997. ALL OF THE USUAL ATTRACTIONS WILL BE THERE -

PRIVATE TRASH AND TREASURE SALES
TRADE DISPLAYS
CONTESTS
COMPETITIONS

FISHER'S GHOST AMATEUR RADIO CLUB
Classes are held in Basic Electronic Theory and Morse Code every
Wednesday Evening from 7:00 pm at the Campbelltown High School,
Chamberlain St., Campbelltown
Also every Third Tuesday of the Month from 7:30 pm, at the
Campbelltown High School, is the General Meeting night with lectures
on popular subjects. Visitors are always welcome.
Due to various reason both our packet PMS VK2FFG and the BBS
VK2TLU are out of service. Some members can still be contacted at
other BBS's. We will broadcast any new arrangements when we are able
to.
Last weekend's JOTA exercise went extremely well, with at least one HF
set and one VHF set in constant use from start to finish. The Scouts and
Guides contacted other groups in New Zealand, Darwin, Tasmania and
all over the metropolitan area. They were particularly fascinated with a
QSO to Siberia. Thanks to the operators and club members who gave up
their time to make the weekend the success it was.
The "Home Brew" night was interesting and entertaining with some
sophisticated projects on display. The winning entry was a smart power
supply and battery charger for video cameras.
--Publicity Officer, Chris VK2ZCJ

AUSTRALIAN LADIES AMATEUR RADIO ASSOCIATION INC.

ALARA CONTEST

All licensed operators throughout the world are invited to participate.
Also open to SWLs. YL works everyone.
From: Saturday 8 November 1997 at 0001 hours UTC
To: Satruday 8 November 1997 at 2359 hours UTC
Oms & Clubs work YLs only. One contest (combined phone and CW) run
over 24 hours. Bands to be used are 3.5, 7, 14, 21, and 28 MHz only.
Phone and CW Operation. Each station may be counted twice on each
band for credit - once on ohone and once on CW.
Exchange: RS or RST, serial no., starting at 001, whether an ALARA
member or club station, name.
SCORING: Phone: 5 points for ALARA member contacted
4 points for YL non-member contacted
3 points for OM or Club station contacted
CW: Contacts where at least 1 operator is novice class
count double points, otherwise same as phone.
SWL: 5 points for ALARA member logged
4 points for YL non-member logged
LOGS: Single log entry (but Australian YL novices entering for the
Florence McKenzie CW trophy should indicate their CW score
seperately) Logs must show date/time UTC, band, mode,
callsign worked, report & serial no. sent, report & serial no.

received, name of operator of station worked, whether it is a
Club station, and points claimed.
Operators of Club stations MUST identify each contact as with a Club
station.
Use of personal callsigns while operating as a Club member is not
permitted.
Logs must be signed and show full name, callsign and address of
operator, and show final score.
Logs must be legible. No carbon copies. No logs will be returned.
Decision of the Contest Manager will be final, and no correspondence
will be entered into.
Logs must be received by the Contest Manager by 31st December 1997
Contest Manager: Mrs. Marilyn Syme VK3DMS
PO Box 91
IRYMPLE 3498
VIC Australia

FLORENCE MCKENZIE CW TROPHY: This will be awarded to the
Australian YL novice operator with the highest score (not necessarily an
ALARA member). Minimum score 50 points.

--Dot VK2DDB, VK1/VK2 ALARA State Representative

HORNSBY & DISTRICT ARC INC.

The next meeting the formal monthly meeting will take place on Tuesday
28th. October, in the Mount Colah Community Centre, Pierre Close,
Mount Colah. (near the eastern entrance to the railway station.) at 8:00
pm. The guest speaker for, the evening will be Dean VK2TJY., the talk,
will be on Internet, and assisted by peter VK2XZP., as there will be a
demonstration to accompany this talk. This will be of interest to many,
as the talk will be covering the use of the Internet, and there is a lot of

interest Amateur Radio Operators. YES! VISITORS ARE WELCOME.
The Club net is every Monday night using the Club call sign VK2MA,
through the Club repeaters VK2RNS. and VK2RAT. The frequencies are,
147.250 with a positive offset, and 439.975 with a 5mHz negative offset.

All are welcome to join the net, and listeners tune your receivers to
147.250 or 439.975. Yes! we would like you to join the net, or come along
to one of our meetings, you will be most welcome.

If you would like to know more about the Club, or its activities write to
HADARC., Post office Box 362., Hornsby 2077., or phone John VK2WRT
on 9807 2490 again 9807 2490.
-- John. W. Turner VK2WRT, Publicity Officer

THE AUSTRALIAN AMATEUR PACKET RADIO ASSOCIATION

Well here are the rest of the sharware software titles as stated last week,

here are the remaining titles :-

(7) Clusse 0.31 (DOS) 20/8/97 updated from 0.30
(8) FPAC-Linux 2.00f (linux) 3/8/97 updated from 1.7

That is all I have, for you this week, if you require more information on these titles, or AAPRA in general. Please phone the Secretary on phone number 9489 4393.

-- John VK2WRT, Publicity Office

MID SOUTH COAST AMATEUR RADIO CLUB

THE NEXT QUARTERLY MEETING OF THE MID SOUTH COAST AMATEUR RADIO CLUB WILL BE HELD ON SATURDAY NOVEMBER 1ST 1997 AT HANCOCKS RANCH, LITTLE FOREST ROAD, MILTON.

OUR GUEST SPEAKER WILL BE DOROTHY VK2DDB WHO IS GOING TO GIVE US A TALK ON 'WOMEN IN AMATEUR RADIO'.

TO REACH THE RANCH, TURN WEST OFF THE HIGHWAY THRE KILOMETRES NORTH OF THE VILLAGE OF MILTON.

ARRIVALS START FROM 1030 HRS ONWARDS. BRING THE FAMILY WITH YOU FOR AN ENJOYABLE DAY. YOU WILL BE MADE MOST WELCOME.

FACILITIES ARE AVAILABLE FOR BARBECUEING AND WE SUPPLY TEA, COFFEE AND AFTERNOON TEA.

LOOKING FORWARD TO SEEING YOU THERE.

BROADCAST ROSTER
Next Sunday, 2nd November, 1997

Morning:
Announcer: Eric VK2KUR
Engineer: John VK2WRT & Daryl VK2EAT

Evening:
Announcer: Pat VK2JPA
Engineer: Peter VK2CZX

If you would like to submit a news item for inclusion in the VK2
Divisional broadcast, please send it to us by one of the following
means:

by post to PO Box 1066, Parramatta, New South Wales 2124
by fax to (02) 9633-1525
by packet radio to BCAST@VK2WI.NSW.AUS.OC
by Internet email to vk2wi@ozemail.com.au

The deadline for submissions is 2pm on the Friday preceding the
broadcast; if sending by packet or Internet, please allow for forwarding
delays in the network.

If sending printed copy, please double space your text, leave wide
margins, and use a plain font such as Arial or Helvetica for clarity.

Please proofread your text, check your grammar and punctuation, avoid
using shorthand and abbreviations, and use the exact words you wish
the announcer to say on air. Remember, the more care you take in
preparing your news item, the better the announcer will read it.

>are not allowed to forget it-or fail to be initially informed, for those
>newly situated. PR is a BIG requirement, and the ARRL has historically
>been very good at this.

It has? I realize that I am likely to be as biased as you are, but I don't believe that the ARS has a very good image outside of the amateur community. It doesn't really matter what _we_ as radio amateurs believe about our usefulness, we are a biased audience.

I know that in many places amateur radio does provide important emergency services in conjunction with local police and fire agencies. During a recent hotspell, local amateurs were scouring local hillsides checking ofr fires. Given the recent Oakland fire that wiped out (3000? lots of anyway) homes, that would seem to be a valuable service. But I don't see much knowledge of this cooperation outside the amateur community.

>Are you saying that the no-code techs vastly increased the number of
>repeaters occupying the 2-meter band? This is news to me. Or did they
>just make more fully utilized those repeaters already installed, which
>doesn't do much for filling up the wide open spaces.

This whole question of utilization is a very interesting one. I live in one of the larger metropolitan areas in the nation (the San Francisco bay area) and with a few notable exceptions, most of the repeaters on 2m are closed, and those that are open seem very underutilized. I'd be surprised if outside of commute hours, that repeaters reached a 10% utilization.

Given that environment, there is very little reason to add repeaters into an already underutilized repeater network, especially when one has to deal with the highly political frequency coordination efforts.

>You're Saying that "no newcomer wants to learn Morse code". Especially
>if he is a priori indoctrinated to think it is worse than worthless,
>a waste of his time.

It is equally discriminating for an existing ham to berate incoming technicians for their lack of code. I think an incoming amateur who seeks to learn the code finds FAR more support in the existing hierarchy than those who view it as a waste of valuable time.

>How many levels of redundency can we afford, or will the taxpayers fund?
>As one who has experienced the simultaneous failure of both primary and
>redundant systems in a serious non-amateur situation, I can see a
>possible backup role for Morse in the high-tech age.

Is this some new kind of proof? "Proof by averted reality?" "Proof by accelerated imagination?"

Why are so many people focused entirely on "how to keep people out" ???

As Gary said, ham radio is the only avocation I can think of that actively discourages and places artificial barriers and disincentives in the way of prospective newcomers. Every other avocation I can think of has active groups of participants who welcome and encourage newcomers with open arms.

Why are so many hams such cranky, antisocial olde fartz???

From a government standpoint, the only way to justify the existence of the amateur radio and it's many frequencies is to provide communications in times of emergency. In a worse-case situation, this may require using primitive or partially operating equipment and adverse operating conditions. Because CW (Morse code) it is a very "narrow" signal- requiring little bandwidth, it can get out with low power and through high noise better than any other mode. It could be the diffence between being heard or not!

What I can't understand is why there is so much belly-aching about the code now? I didn't hear this when I got my license in the 1960s. We accepted learning the code as part of the process, and anyone who gave it any effort did! So what's wrong with people now a days? Are they dumber? Or just lazier?

>#1 as justification.

What makes you think that? There might be some truth to this claim, if
you could present evidence to show that a significant number of coded hams
feel this way, and that their "superiority" is the crux of their feelings.
I don't think either is the case. At the basic heart of matters, I feel,
is that people believe that just as America gets "dumbed down", we have
likewise seen amateur radio dumbed down.

I've been around amateur radio for almost 15 years. When I started
studying for my Novice test years ago, my then-girlfriend-now-wife's
brother let me operate 3rd party on a VHF repeater. I was able to
listen and learn quite a bit. I didn't hear people who went from
no-license to "Extra" in two months getting on the repeater asking
questions like "how do I make a dipole?" I hear *way* too many of
these types of questions -- basic questions people should have the
answers for -- or, at the very least, have the reference material to
look up the correct answer. I don't expect everyone to remember
everything (sure, I have a copy of my "Basic Electronics" and ARRL
Handbook in my shack) but when you start hearing these occurances
not once, but over and over again, you have to start wondering...

>In any case, the downside to required CW testing
>[deterrence of new hams, etc.] which *is* demonstrable & measurable seems to
>outweigh any dubious gains from 'entry filtering' or 'firewall' functionality.

How exactly is it "demonstrable"? No evidence has been presented to
support the assertion. Instead, we have a collection of anecdotal evidence
presented by the anti-morse crowd which sez (surprise, surprise!) that
code-is-bad and it deters people. On the other hand, we likewise have

anecdotal evidence presented by the pro-code crowd that sez (surprise, surprise!) that code-is-good, and those interested in ham radio will get involved regardless of the morse-for-HF requirement.

I actually, believe it or not, agree with both. Is code a deterrent? Sure. So is the theory test, so is the VE testing fee, so is the high cost of equipment when compared to CB radios. However, I don't see anyone calling for adjustments to the amateur radio system to accomodate those "hurdles". Instead, I truely believe, that anyone seriously interested in amateur radio will get involved regardless of the HF morse test, and will get on VHF+ and work the numerous modes available there. With respect to HF, there is very little to do except work DX and partake in some contesting.

>Not that there is anything particularly wrong with #2 as a rationale (it is
>normal to want to feel special in any relationship), but people should be
>honest about it instead of hiding behind specious arguments in the name of #1.

Licensing standards should be set to weed out the less desirables, to improve the overall quality of ham radio. What are the standards and what are their intended goals? That's up for amateur radio to decide. If a consensus was reached that said "test an applican't ability to program in 8-bit machine code" because people felt the ability to program embedded microcontrollers was a skill amateur radio should promote, then so be it. Its not a matter of one group being better than another group (which, I feel, most amateur radio operators ARE when compared to the general public anyway -- and, afterall this isn't Russia, and not everyone has to be exactly the same -- the world needs garbage collectors as much as it needs nuclear engineers) its a matter of designing a test system which selects candidates possessing those qualities we find important for our hobby.

Because in the 60's there weren't other modes that would perform just as well if not better (digital). Folks didn't "belly-ache" cuz there weren't really any options. Now there are. And it's also time to bring Ham/Amature operations fulling into the 20th century.

These days that argument holds about as much water as saying we should have to learn semiphore - in case the phones quit working.

Lee Roberts wrote:

> This isn't basket weaving.

No, but it is not neurosurgery, dispensing prescription medicines, flying an aircraft, designing a suspension bridge, or driving an auto over that bridge either. (All tasks which require some sort of prior if not ongoing skill verification, and are currently government regulated, because lack of aptitude has the potential for substantial loss of life or property -- both to the participant but more importantly to others. Few folks, except perhaps very strict libertarians (and even then I'm not sure) would argue against some sort of entry barriers here)

Hams fail to keep things in perspective. It's a hobby! Nobody but hams notice, or care, or are affected in any significant way on a daily basis by their actions.

I would contend that it *is* much closer to the avocation of basketweaving. If you want to do it, and be the *best* basketweaver around, hey great! It's only natural (but not a requirement) if an enthusiast in any activity wants to encourage others to reach their full potential. More power to you. But your actions [or the total number of basketweavers] really have little impact one way or another on everyone else, outside of your quilting circle (or whatever they call it, to stay with the original basketweaving analogy) *if* you even choose to belong to one [definite parallel here to radio clubs, ARRL, etc.]

I know it's a tough pill to swallow, especially for hams --- the hobby is a fairly old one as these things go, and people enjoy telling the old stories and harkening back to an era where maybe they did play a more significant role and were somewhat more respected than today. Perhaps many hams would like to go back to such a time and status. Fine, but requiring people to know the Morse Code is just not going to hack it.

>It could be the diffence between being heard or not!

I was watching a show on the Discovery channel about dinosaur evolution
about a week ago, and it got me thinking.

Ham radio itself is obsolete.

Twenty years ago, many government agencies did not have the redundant,
disaster-hardened communication systems that they have today. Even if
a local disaster were to occur, the continued "shrinking" of the world --
our ability to get from one point to another almost instantaneously --
negates many problems.

Case in point: two regional disasters.

In 1978, New England suffered the worst snow-storm in -- well, in the
past century. We got over 3 feet of snow. Our government agencies were
ill equipped to handle this much snow in a short period of time. Rhode
Island was literally shut down for a week. I lived in Providence, 3
miles from the State House, and it took 5 days for a backhoe to make it
to my house to clear the street. Even then -- where could you go? Overall,
it took two weeks to get back to normal.

About 7 years ago we had a major hurricane. Power was out for 5 days.
However, after the hurricane, utility companies from around the country
sent repair trucks into the area to fix telephone and power lines.
What would have taken our local utility company months to fix took only
a few short days, maybe a week at most for people in rural areas.

How does this apply to amateur radio?

Well, let's assume that you're in LA, and an earthquake hits that takes
out the city's communications network.

Thirty years ago, it would have taken weeks to recover. First, other
agencies would not be able to get replacement communications gear to you
in a timely fashion, if at all. So, who did local government agencies fall
back upon? You got it -- ham radio operators.

Today, we just don't have that importance. Government officials know if they get clobbered, FEMA will storm in like FBI tanks at Waco and give you all the comm gear you need to get back on-line. Overnight. No more need for ham operators.

Government officials have lost sight of our
important role because they are brainwashed into thinking that someone else -- another state's agencies, the federal government, and so on -- will be there to help them out in a major disaster.
Rhode Island doesn't care about ham operators anymore because they know Mass and surrounding agencies will help them if a disaster hits, but what if Mass and all those surrounding agencies -- even federal agencies, were overwhelmed by a disaster of national, or global, proportion?

Thus, in a sense, we need to shift focus. We are no longer vital in regional disasters.... But, what if a global disaster were to happen? Call it the "Independence Day" scenario. Its not unlikely that sometime in the future that six-mile-wide asteriod will slam into Earth again. (hence that Discovery channel tie-in.)

Maybe a new marketing slogan for amateur radio:

"Ham Radio: Communications for you, even after Doomsday".

But, I think my post gets my point across. Digest and comment.

Lee Roberts <ki7rw@prairieweb.com> wrote:

>I'm not. I just believe that some standards should be set. If "everyone"
>is against code & theory testing, then what standards are we to use?

The plain fact of the matter is that, despite liberalism's attempt to equalize everyone in society so the garbage collector feels as "good" about himself as the brain surgeon does -- amateur radio is not for everyone. It has a set series of goals, and testing standards need to be put into place to ensure that people with the skills and knowledge desired by amateur radio are the ones that obtain licenses.

Several years ago I surmised that many of the arguments the anti-morse camp uses to rail on code testing are as equally applied to theory testing to eliminate it. Look at the crux of the anti-morse arguments:

"Morse is outdated, why should we test on it?"

(Isn't much of the "theory" outdated too? I see lots of SSB theory in there -- a mode created shortly after CW.)

"If I don't want to use CW on HF, why should I be forced to use it?"

(Hey, if I don't want to understand why my radio works the way it does, why should I be forced to learn all this theory crap?)

"Morse is keeping out millions of techno-geniuses"

(Theory is keeping out millions of techno-zeros too.)

>Disincentives? It seems to me that you don't want any standards for ham
>radio. I find that the current exam structure to challenge people to
>learn something.

I agree with your first statement. Ultimately I believe we will see pressure to reduce or eliminate the theory examinations too. I suspect we will see it happen about 10 years after elimination of code for HF fails to produce those millions of techno-geniuses anti-morse proponents claim exist. As part of a "last gasp" to save a dead hobby, the move will be to eliminate most, if not all, testing to encourage as many people to get licenses as possible -- to "flood our bands". I suspect we will see this by the early-to-mid 2010's.

I completely disagree with your second statement. The existing theory examination system does nothing except test ones ability to familiarize oneself sufficiently with the question pool to pass the requisite

examination. It tests short-term memory abilities. Nothing more.

Where? All radio services but ours have abandoned Morse.
Why do you think it has value? Do you base this conclusion
on watching "Independence Day?" Morse is always
conspicuously absent in emergency or commercial
communications. I guess this inconvenient fact doesn't
carry much weight with you.

>sigh..... I hope I can get some converters or something...

Well, most people who use cellular phones don't *want* people listening to their conversations, so don't expect it to be easy. In the past it was, because the creators of the North American cellular system were lazy, and used plain analog FM modulation for phones. Since this is exactly the same as what was already in use for almost all VHF and UHF voice communication (except aircraft), all kinds of existing scanners could receive cell phones.

But European cell phones have always been digital. To receive digital transmissions, you need different hardware - but a modified cellphone is exactly the hardware you need. However, the European system is also encrypted, so even with the correct RF hardware you can't listen to other people's conversations because you don't have the encryption key. I don't know which of the new North American systems use encryption. If they do, you can just about forget about listening to the conversations.

Personally, I wish the NA systems had been encrypted digital from the beginning, like European. Then cellphone conversations would always have been secure. As a result, there wouldn't have been these stupid laws in the USA which try to make receiving cellular frequencies illegal and difficult, which in turn means that most ham and scanner equipment sold in Canada lacks coverage of a particular chunk of frequency range.

Dave

By the way, MASA, your email address above is unusable. There is no .ham domain according to my local name server.

Well the Yaesu FT747 is nice, so is the Kenwood ts440
The 440 is a better radio than the 747, but the 747 is a piece of cake
to use..

>the only solution.

Noted. In fact it is far from optimal, and that's the point. We can
do better, often much better, and much *cheaper* (in man months).
And that's been the case in recent disaster experience, IE CW has
been virtually unused by amateurs in any disaster in recent times.
You have to reach back literally before the computer age to find a
significant example of Morse usage for disaster comms.

>Note also, that my reference was to "a single operator in a hastily put
>together emergency center. Often when an emergency hits, a number of
>elements apply, not the least of which is MURPHY.

Lets not blame poor old Murphy. He gets blamed for a lot of things
which are really poor contingency planning by the operator(s) involved.

>One is that you never seem to be in the right place at the right time.

>it's supposed to be). If a tornado takes out the antennas at the local
>fire station, I can get them back on the air with materials 'on hand'.
>It's unlikely that their 'dispatcher' could do that.

That's true. Improvising antennas is something a ham is trained to do.
A ham is supposed to be a technical specialist. He is supposed to be able
to deal with technical malfunctions. If he is tasked with supplying emergency
comms, he will also be prepared and have a plan so that he *doesn't* flail
around madly when an emergnency occurs, grabbing whatever falls to hand.
I have a "jump" kit in the truck, and another at home, so that if an emergency
occurs, I'll be prepared to deal with it. Those kits include comm equipment,
but aren't limited to just comm equipment. You have to survive too, and you
might as well plan to do that comfortably. Any ham serious about supplying
emergency comms should do the same so that there won't be any last
minute flailing around, with the probability that some critical item will
be overlooked.

>You can postulate the availablilty of computers, tncs, whatever for your

>what's the percentage of time that a. you'll be at home when it happens
>or b. have time to go home and get the stuff ? Pretty low in my
>experience. And how many really run "mobile" packet stations on HF ?

Well, I have a mobile HF *digital* station, but it certainly doesn't use
packet. I do carry a packet station with me at all times, a HP95, a
Baycom dongle, and a VX-1R. They fit in a coat pocket. But that's
not for serious comms, I have a 56 kb UHF packet setup for that.

Realize several things. First, packet (as presently done) is a lost cause
on HF (though it is Ok on VHF+ where the propagation is very different).
Use a digital system optimized for HF instead, IE AMTOR, PACTOR,
or the newer Clover or PACTOR II. Don't even think about trying to use
AX25 with Bell 103 tones. That's a waste of time and bandwidth on HF.

Second, realize that the "TNC" is an obsolete paradigm, left over
from the days when we used DEC VT100s, ADM3s, or TI Silent
700s. Today we *have* a computer, and it is perfectly capable of
shouldering the load formerly carried by a Z80.

And third, realize that computer means a laptop or a palmtop which
we *will* have with us almost all of the time. And we can power that
off of a vehicle battery if we have to operate in the field longer than
its internal battery will sustain it, same as our radio equipment.

>Yes, you may be able to train someone to operate a voice radio, in a
>hurry. I'm not convinced, however, that you can do the same for a
>packet operator. It's not only understanding the mechanics of operating

>given 10 minutes of training and expected to handle life and death
>traffic.

Most of that "gibberish" is a hold over from Morse operations. Plain
English suffices for voice and digital comms. Packet, and other forms
of digital, can be arcane to operate, but it doesn't have to be that way.
That's really a function of how well the software is designed, and how
well the network infrastructure has been designed. It *can* be as simple
as point, click, and type. Millions of people manage to do that with
the internet, there's no reason amateur networks should be more
arcane for the *user*. Configuring the system may be a bit more
challenging, but that's done *before* turning it over to the layman

to operate.

>By 'infrastructure' I meant a couple of things. First, the hardware. I
>can grab almost any HF radio, any time, and put it on the air for a
>voice or CW QSO. But if I want to use that same HF radio for a digital

>put to gether a packet station on the fly very easily and maybe not at
>all (you never have that 'one' connector you need :-). But I can take
>Joes radio and Jims antenna and get a voice or CW station going.

This is all a function of being prepared. If you aren't prepared, of course
you can start cursing Murphy, but if you are serious about being able to
field emergency comms, you will be prepared. As a technical specialist,
it is your *job* to hook things up before turning them over to an operator.
Thus you should come prepared to do your *job*. That means you
should have your pocket tool kit, some adapters and connectors, and
most important, some clip leads and tape. That'll deal with any interfacing
problems you are likely to face.

>That moves right into the second infrastructure need. Someone to talk
>to. With voice modes or CW (I'm talking HF here) I can get an emergency
>net started almost immediately with stations I'll find on the bands
>almost any time, any place. To try to pass emergency traffic in a
>digital mode, you have to have a pre-established network ready to go. If
>you don't have it, you might spend hours trying to find someone just to
>establish a QSO with, much less someone who's equipped to handle
>emergency traffic. This is the 'real world', not someones ideal of how
>an 'emergency should work'. Sure 'eventually' you can get a digital
>network running, notify operators of established networks and get them
>on the air, but when the emergency starts, you need communications NOW,
>not a few hours from now or tomorrow.

And indeed that is why an emergency network *does* exist for digital
operations on HF. When the hurricane hit Antigua, the ham who got
back on the air first knew exactly who to contact, the UN disaster
MBO in NY, on the air 24x7 waiting for just such a PACTOR contact.
He didn't have to flail around looking for a random contact on CW or
voice. He knew precisely what station to contact, and where it was
to be found on the bands.

>As I said before, Packet is fine in the EOC to talk to other EOCs and
>fixed locations, but I don't see it as having a significant place in the
>field except in a very few situations, in longer term emergency

>operations, at least not right now.

That's only because you haven't made it a part of your preparedness plan. You're stuck in a random flailing mode, which is the mark of *not* being prepared and *not* having a plan. Things aren't problems when they are part of the plan. They are just alternative branches in the contingency plan.

If amateurs are serious about being an emergency resource on HF, they would do well to examine the plan adopted by Globe Wireless for handling marine comms. Globe has 8 stations spotted around the world. Each monitors a number of frequencies across the HF spectrum, and all are tied together via the internet. Marine stations consisting of a HF transceiver capable of being computer controlled and a computer equipped with a Clover 2000 modem, continously scan the Globe frequencies, looking for the station and frequency with the best propagation at the moment (the network stations beacon when not handling traffic in order to provide propagation information). If a contact is needed, the user station automatically establishes a connection to the station with the best propagation and passes its traffic. That is then routed automatically by the internet to either its destination, or to another Globe station which has propagation to the target station.

There is nothing very exotic, complex, or expensive about the Globe network. Any reasonably well heeled group of hams could set up a similar operation, and any user with a transceiver and a computer could use it in an emergency situation. Hams haven't done exactly this yet, though there is a collection of MBOs which offer some of the functionality of the Globe network. The missing piece today is the internet connectivity to tie them into a coherent global network.

On VHF+ packet, many areas have established LANs (actually MANs, but that term isn't in the amateur lexicon), which serve a similar function to that of the Globe Wireless network, but on a more local scale. If these are designed with emergency comms in mind (some are, some aren't, at present), they can serve the same sort of function as the Globe Wireless network, but on an appropriate local scale.

There really aren't any technical issues to resolve to include digital in emergency operational plans. The primary thing needed is an organizational plan to support the network, and to deal with contingencies should any part of it fail in a disaster, IE redundancy and reroute plans should already be in place before a disaster occurs. This is just a part of being prepared to supply emergency communications.

This lack of preparation and planning seems to be what's lacking among those who create fantasies of the lone wolf operator pounding the brass to save the day. That isn't how real emergency comm support is done today. Present that "plan" to an EMA communications director, and after he stops laughing, he'll show you the door. That is, if he isn't

as undisciplined and clueless as you (generic you) are. There are some EMA folks like that, but thankfully few. Most will expect a detailed set of contingency plans which can be evaluated to see how workable they would be in a disaster.

A final note. I've aimed this missive at digital comm support, but the same factors hold for voice comm support, or any other form of emergency comm support. Being prepared, and having a workable plan, is key to any good emergency response system. Depending on random flailing about to form an ad hoc system on the spot is a recipe for failure. Too many hams seem to want to point with pride to their ability to flail about. That isn't something to be proud of, that it is needed indicates a lack of serious preparation and planning.

(And I'd note that such planning, and testing the plan, can be a good intellectual challenge, and a lot of fun, even if it has a very serious ultimate aim. Lets not forget that we don't get paid any other way to do this.)

Kindly tell us, WHAT do we control? Do I or WE have any control over what you do? Do I or we control even the lower 25khz od any ham band? What I (and you) have control over is what we individually do with our selves, time, lives, attitudes, efforts, intellects etc. That is ALL. If I had had *control* I would not have learned code either. Who is trying to *gain* control?

' We walked six miles in snow uphill to school
> -both ways and so should you.'

No, it was only 1 mile each way, tho it did snow sometimes-many others still walk that far to school today, too. But where do you get the idea that I(we) are trying to force that, or anything else, on you? If you want the shingle all you have to do is meet the qualifications, just like everyone else does and has. Quitcherbitchin'.

The military has dropped code, the Coast
> Guard, the rest of the world..

So? Care to give us some examples of the similarities and differences between the military, coast guard, the rest of the world and ham radio? In case you haven't noticed, ham radio operates under a much different and very much broader charter and concept that any organization that needs purely and only communications. We are the *Amateur Radio Service*. We do, or should be ready to do, many things for a wide range of people and entities. "In the public interest, convenience and necessity" is the way it is stated in Part 97.

>Time for the amateurs who used to be first
> to catch up with the rest..

Sorry, our communications capabilities preceeded those of all those other users and their capabilities were predicated on ours. The fact that they have discarded everything that they don't presently need is certainly no indication that we should follow suit since their needs are NOT the same as ours. We don't have to pay attention to organizational budgets and funding, making certain that the taxpayers contributions are not needlessly wasted.(wish they would REALLY do that)

Our service, on the other hand is very diverse and spread all society and civilization, with needs that cannot be fully determined until such

time as sudden events decide our directions for us. Who has control of that?.

To say that the code will never again be needed bcause newer technologies are available is to say that your 10 year old car cannot take you from point A to point B. After all, it too is obsolete and outdated. When new cars are in the possesion of all drivers, all older cars and Morse code can be done away with.

Does anyone have the pinout for the RJ-48 microphone plug for the Icom 706? The info I have is:

(From left to right)

1 - N/C
2 - Black (Shield)
3 - N/C
4 - N/C
5 - Green
6 - Black
7 - White
8 - Blue

This arrangement does not work. Can someone post or email me the correct configuration?

Thanks in advance,

Ed Dial - WA4RYW

More likely, he is referring to the Clearnet "Mike" system, which is the same or similar to Nextel in the USA. It is the Motorola "IDEN" system (Integrated Digital Enhanced Network??). The Mike service from Clearnet is basically an 800 Mhz trunked radio system but using all digital transmission. you can get the frequencies for this from several sources (Try the Quebec haruteq scanner guide?). But its pointless as you will only hear data on your scanner (not voice). On the other hand, if you are using Motorola portable radios on one of Clearnet's conventional trunked SMR (Specialized Mobile Radio) systems, you CAN monitor this. You will still need to program your scanner with the trunking system frequencies, and the conversations will hop from channel to channel as the system is shared with other users. You have to first find out which of the three systems your school is using (Clearnet PCS, Mike, or regular trunked "SMR" service)

> 8 - Blue
>
> This arrangement does not work. Can someone post or email me the
> correct configuration?
>
> Thanks in advance,
>
> Ed Dial - WA4RYW

You can find it on page #8 in the Owners Manual. It is as follows:

Pin 1 - +8vdc output
Pin 2 - Frequency Up/Down
Pin 3 - AF output
Pin 4 - PTT
Pin 5 - Microphone shield (ground)
Pin 6 - Microphone Input (center wire)
Pin 7 - Ground
Pin 8 - Squelch switch

Check out the mike you are wiring up for the actual function of each
wire rather than going by colors, then connect using the above pin
functions and all will be OK...

Note - Pin 2 uses one wire for both channel up and channel down, by
changing the line resistance depending on which switch is pushed. See
the owners manual for the schematic.

Funny, the only whining that's taking place there is by certain
pro-coders that feel the written exams aren't sufficient. Yet
when given a solution to that problem, they either ignore it,
or agree with it but do nothing.

>> As Gary said, ham radio is the only avocation I can think of that
actively

I suspect you'd find that Carl would like standards that you probably
couldn't pass. The current licensing structure places a major emphasis
on a minor mode. Eliminating that bias doesn't raise or lower the
standards.

>> prospective newcomers. Every other avocation I can think of has active

I can't say that I find learning OOK Morse Code to be bettering anyone.
Also, last time I checked basket weaving couldn't cause any harm
to anyone else and as a result is not a licensed activity.

>> Why are so many hams such cranky, antisocial olde fartz???
>
>If we were antisocial, we certainly wouldn't be in ham radio. Why would
>antisocial people want to talk to anyone else?

Do they? I can't tell you the number of times the students in my
radio club have called CQ on 20 meters only to be completely
ignored. They may want to talk, but only with a certain select
few. That's not what I'd call social.

No Mr Baker its not Basket Weaving nor is it CB, it sounds like what you want is CB, if you cant handle the Code or the Theory sounds like maybe you should move on, try Basket Weaving or CB you will probably enjoy that.

<62rruk$2au@anomaly.ideamation.com>...
>
> Licensing standards should be set

Agreed ...

> to weed out the less desirables,

Government licensing for access to the public spectrum should NOT
be some form of "social engineering." Liberals in government have
done far too much of that sort of stuff already with things such as
"affirmative action," etc. (Note that I am not opposed to equal
opportunity for blacks and other minorities, just opposed to the
concept that past ills can be cured by reverse discrimination.)

> to improve the overall quality of ham radio.

Sure, but requiring archaic skills that are viewed as valueless by
large numbers of people who could and would otherwise be capable of
contributing greatly to ham radio is NOT the way to do it.

The way to do it is to (finally) establish meaningful, relevant, and
appropriate qualifications, which are aligned with the technology of
the real world we live in today, not the nostalgia of the 1920s or 1930s.

> What are the standards and what
> are their intended goals? That's up for amateur radio to decide.

That is actually, WAY off base, and quite inaccurate ... it is NOT
"up for amateur radio to decide" ... it is up to the government in
each country (and to a degree, the ITU, which (sort of) represents
the collective governments of the world).

While incumbents can have input into that decision making process,
they ARE NOT the final authority, nor should they be.

> If a
> consensus was reached that said "test an applican't ability to program in
> 8-bit machine code" because people felt the ability to program embedded
> microcontrollers was a skill amateur radio should promote, then so be it.

Again, this concept of "regulation by consensus of the incumbents" is
absurd, inappropriate, and just plain wrong.

> Its not a matter of one group being better than another group (which, I
> feel, most amateur radio operators ARE when compared to the general

> public anyway

No, it IS a matter of just that sort of feeling, which is widespread amongst the pro-code, "Real Ham," "Complete Communicator" mindset/crowd ... groups of people with deep-seated feelings of inadequacy often group together as an excuse
to collectively pat themselves on the back for their "accomplishments" and put down anyone who is different, so that they can feel superior and, therefore,
less threatened. This IS a LARGE component of the pro-code radical's mentality.

> its a matter of designing a test system which
> selects candidates possessing those qualities we find important for our
> hobby.

NO, NO, NO ... it is NOT up to us to perform some perverted and inappropriate experiment in "social engineering" ... realistic, relevant, justifiable test and license criteria and qualifications need to be established, but NOT in the mode of "regulation by consensus of the incumbents" (which rapidly deteriorates into a "haves-vs.-have-nots"/"man-the-barricades" scenario as illustrated by ARRL lobbying from "incentive licensing" on).

Licensing is up to the government, which is *supposed* to represent all of the people, not just beepers and QST subscribers (er, I mean ARRL "members".)

Those who insist that such "social engineering" and "regulation by concensus of the incumbents" are the way in which rules should be made and rules changes made (or blocked) are clearly trying to engineer a situation where they can attain and maintain control over the exclusion of others, simply on the basis of
the encumbents' desire to "elevate their status" and dominate the arena.

No need to try CB, I've held the Advanced Class license (WA3ZXO) since 1976. Also the 1st Class Radiotelephone (now General Radiotelephone) License w/Ship Radar Endorsement since 1974. BSEE since 1981. MSEE since 1988. So much for the notion that I am a slacker unwilling to work for what I want. 'Nuff said......

As for basketweaving, not my thing. Sorry!

Seriously, I think that the sort of invective that WA8ULX spouted in response to my original post kinda sums up the whole discussion. He did not know me, but assumed that I was some unlicensed codeless wannabe just chomping at the bit to join the fraternity and grab "his" privileges. Illustrates two points ----

1) How hams (not all of them, I know, but more than we would like to admit) respond to a prospective amateur....either spoken or unspoken
2) The self-centered attitude of some hams who cannot grasp the possibility that someone *in* the hobby might actually have a critical perspective on it

NOBODY that I have seen is *really* against theory testing ... it is
sometimes thrown out as a "If you eliminate code tests, what next, no
theory tests and be like CB?" red herring by pro-coders wishing to
obfuscate, but nothing more.

> Anyone can turn some dials & talk into a mike but the ability to do code

> radio.

Interesting that you should say that, when I have consistently advocated
better theory tests and even retesting at renewal time to assure that
folks keep up with technology and remain competent, rather than stagnating
in place like so many old time beepers.

> I find that the current exam structure to challenge people to
> learn something.

Yes, but the challenge is *primarily* in learning the Morse ... everyone
seems to admit that the written tests are too simple and need to be fixed.
Fixing those tests, restructuring the license classes to 3 that have some
semblance of sense WRT testing vs. privileges granted, and modernizing the
technical rules to remove unnecessary and counterproductive barriers to the

development and introduction of modern technology are ALL part of my agenda.

> You, on the other hand, want everything handed to you
> on a silver platter. So you label challenges as barriers.

See above ... same answer applies here.

> > Why are so many hams such cranky, antisocial olde fartz???

> one's perspective. To a 20-something, I'm old, but to a 60-something I'm
> a young "whipper-snapper". :-D

Being an "olde farte" is something totally independent of one's chronological age ... it is a state of mind, of stagnation, of crankiness and intolerance for anything or anyone who doesn't "do things the way they've always been done."

> If we were antisocial, we certainly wouldn't be in ham radio. Why would
> antisocial people want to talk to anyone else?

To get their QSL card for the wall? To get their country for DXCC? To get their county? To get their 10-10 number? Or any of a number of other IDIOTIC GAMES that really have NOTHING to do with radio. The gamers have become far too dominant and have perverted ham radio into something very different than it was intended to be.

Problem is folks are not too antisocial to collect their "points" but they are antisocial enough to want to keep others out so that "their" bands will not be "too crowded." This is a phenomenon sort of like signs that say "Welcome to _fill_in_the_name_of_a_place_, NOW GO HOME!" or people who move to a beautiful location, then try to get the zoning rules changed to keep anyone *else* from moving there. (A "Close the door, I'm in!" mentality.)

97.1 Basis and purpose.

:The rules and regulations in this part are designed to provide an amateur
radio :service having a fundamental purpose as expressed in the following
principles:

:(a) Recognition and enhancement of the value of the amateur service to the
public
:as a voluntary noncommercial communication service, particularly with respect
to :providing emergency communications.

:(b) Continuation and extension of the amateur's proven ability to contribute
to
:the advancement of the radio art.

:(c) Encouragement and improvement of the amateur service through rules which
:provide for advancing skills in both the communication and technical phases of
:the art.

:(d) Expansion of the existing reservoir within the amateur radio service of
:trained operators, technicians, and electronics experts.

:(e) Continuation and extension of the amateur's unique ability to enhance
:international goodwill.

Your first comment above, covered ONLY 97.1(a) ... you "conveniently leave out"
(b), (c), (d), and (e) ...

> In a worse-case situation, this may require using primitive or
> partially operating equipment and adverse operating conditions.

Only if one is so technically incompetent and lazy as to be unprepared and
not have sufficiently robust and redundant means to communicate.

The well-prepared ham who can provide meaningful, useful emergency services
communications (which is NOT Morse these days, it's tactical voice or text
based digital modes with better performance, accuracy, and reliability) is
FAR more useful than hordes of unprepared, technically incompetent beepers.

> Because CW
> (Morse code) it is a very "narrow" signal- requiring little bandwidth, it
> can get out with low power and through high noise better than any other mode.

Patently false. Simply another regurgitation of Morse Myth #1.

> It could be the diffence between being heard or not!

Fantasy-land wishful thinking a-la the flick "Independence Day" (Morse
saves the world from aliens who are technologically advanced enough
to come here, shrug off nukes like mosquitoes, and kick our asses ... but
Morse brings them to their knees ... right ... in someone's acid flashback,
maybe.)

> What I can't understand is why there is so much belly-aching about the code
> now? I didn't hear this when I got my license in the 1960s. We accepted
> learning the code as part of the process, and anyone who gave it any effort
> did!

First, by your own admission, people were more "compliant" then ... less
willing to stand out by asking "why?" ... less willing to challenge any
form of authority and question the justification for anything that "big
brother" said was so ...

There were also DRAMATIC differences in the available technology and the
pace at which our entire society moved and the rate at which the world
around us was changing. It was also 30-some years closer to the time
when Morse was *necessary* if one wanted to communicate at all.

> So what's wrong with people now a days? Are they dumber? Or just
> lazier?

Neither ... it's not that there is anything "wrong with people" in general,
it's just that more people are less accepting of seemingly senseless things
just because some rule made decades ago in a different time and world said so.
People are asking "awkward," sometimes unpopular questions like "Why?"

This is largely because today's society places tremendous drains on everyone's
discretionary time and busy, intelligent people tend to question the "Why?" of
ridiculous, archaic "requirements" like Morse that they *know* they will never
use and have no interest in using.

The "resistance" of Morse operators to allowing a "free market" approach to
learning and using Morse where everyone is free to choose to learn or not learn
and use or not use Morse is really pretty pathetic. In essence, their
insistence
on forcing everyone to learn Morse is an admission that it no longer has enough
value to draw people to voluntarily learn and use it ... and the Morse folks
are
afraid to death that soon there will be nobody to beep with.

I find that argument absurd and the fear (like most fears) to be irrational.
Like horseback riding and many other activities that *used* to be a part of
normal daily life for most people, Morse will continue to draw a
self-sustaining

group of people who do it "just because they like it" or "because it's fun." That not all people will feel that way is not bad, nor does it doom Morse to extinction.

I wish the beepers could "get" that part.

China Ham News 10/25/97
China on EME!

BY1QH, Beijing, confirmed three 2-meter QSOs on EME on Saturday, October 18, and Sunday October 19, 1997. The Tsinghua University Amateur Radio Club station ran 200 watts into a 4x9-element Yagi antenna.

In the first EME experiment, David, BZ1BM, and Lars, SM0KAK, had hoped to work VE7BQH and W5UN from BY1QH, but failed. They did work into Europe and QSOed with three SM stations. David and Lars also heard some DL, 9K and JA amateurs on EME, and are planning their second experiment shortly.

Please direct your interest in working with China on EME to David (bzibm@wg.chnmail.com), the student president of BY1QH.

No, the reason that Morse Code was a requirement for a Ham License, was so that all Ham operators could understand urgent messages from the military, as early Ham operators were considered by the government to be a reserve of radio operators for the military if needed. (very scary, but that is not what Ham radio is today) Since ALL of the military have discontinued using morse code, the initial reason for it as a requirement, (which was NOT just to make it "harder" or "less easier" for one to get a license, or to "weed out" the "lazy people") is no longer valid.

Canada is using the above logic to ask the worldwide requirement be dropped as it is obsolete. Too bad the US or the ARRL can't use LOGIC, but rather cave in to the money paying members that want the requirement to stay!

One further note, my 706MKII shows there are two precision resistors in the up/down pushbutton circuits, internal to the microphone. There is even a note specifying the tolerance requirement. Therefore just connecting a switch may not work. Again mine is the MKII model, but I doubt there is any difference.

Hi Todd, I suspect that very thing is the reason for the irrational child-like attachment to Morse code testing. Eliminating the code test while raising the bar on the technical exam would exclude a lot of the present no-clue, non-technical types from ham radio, those very individuals who, IMO, are responsible for the demise of ham radio. Want to get rid of the CB types? Start with an IQ test (beginning with this newsgroup). :-)

>
> Thanks,
> ---------
> Conrad W8MHH hoff@america.com

I see it this way-if the diodes are closely matched the resistors will not be needed to perform their voltage equalizing function. (they act as a voltage divider to maintain equal voltage accross each diode so that if one that is slightly different in characteristics doesn't cause a voltage imbalance, possibly causing one more diodes to blow from overvoltage. Note that the equalizing resistors themselves must be matched in value.

The capacitors can act as transient suppressors to protect the diodes from overvoltage damage caused by transient voltage spikes. Most commercial ham amplifiers I have seen use both resistors and capacitors. Other non-ham amplifiers I have seen use large HV diode stacks and neither resistors or capacitors, (none external to the diode stacks-some diode stacks may incorporate them). Whether either equalizing resistors or transient suppressor capacitors are used seems to be a matter of the philosophy of the design engineer as much as anything else.

If you decide to build a rectifier without either, use good quality high current diodes (high current capacity for the application, say 3 amp diodes for a 1 amp max. supply) and use at least 3 times the HV value in diodes. IE, for a 3kv supply, use 9 or 10kv of diode capacity. That should do it. If you blow a diode under these conditions, it was probably no good or incorrectly sized anyway. Also, make sure you properly fuse any HV power supply. If you short one diode and the fuse doesn't blow, you may take out the rest of them and more, maybe the HV transformer.

One must be very,very careful and aware at all times around this stuff. Mistakes are NOT forgiven.(for the unfamiliar)

And you have been standing too long out in the sun, or perhaps in the shade of an unshielded klystron.

We all know that there are just SCADS of hams in wealthy Donetsk who have available, and regularly use "Most Optimal Modes", scanning the bands for Morse operators to scatter to the four winds with their communicating power and prowess.

How many times do you have to shove the same crap at the whole world trying to make a moot point? Do you *really* think that Scott-and the rest of the world- doesn't know the attributes of CW as well as the other digital modes by now? The way you hate CW, it is your affirmations of "been there, done that" that are very highly suspect-Not that I'm saying that I don't believe you Carl, but would you really expect anyone to, given your attitude?

What kind of TNC do YOU have at home in use at HF? Any? You expect the rest of us to follow your lead like a bunch lf lemmings when you don't even participate outside work?

Get *YOUR* P38 card, or better yet, follow the advice of your own No-code Agenda camp, and build up your own! Get it on the air on HF, work some *REAL HAMS* and have some fun, lighten up! Then you *MIGHT* achieve a spark of credibility. As it is you have become far worse than a boor. Get over it while you still can. You are even ruining your

health with all this bull and bluster.

If you had spent a small fraction of the time you have been bitching
about code in studying it for a test, you could have been Extra long ago
and saved yourself all this extended grief, and could STILL be
advocating dropping the code test, as some of your cohorts have done.
You see, most people, instead of being "screwed" by the system, they
"screw" the system----They pass the tests!!!
Wise up!!!! Get an attitude!!!!! Get a life!!!!!!

Carl R. Stevenson <wa6vse@fast.net> wrote:

>Government licensing for access to the public spectrum should NOT
>be some form of "social engineering."

That's exactly what tests do, Carl. The only difference between a code test and a theory test is that one selects people with skills related to morse (which you don't like) and another that selects people with technical skills (which you happen to like.)

All government interaction with society is, in some form, social engineering.

>> to improve the overall quality of ham radio.
>
>Sure, but requiring archaic skills that are viewed as valueless by
>large numbers of people who could and would otherwise be capable of
>contributing greatly to ham radio is NOT the way to do it.

Where are these "large numbers"? They didn't materialize with the creation of a codeless VHF license. I'd like some factual studies presented which demonstrate that these "large numbers" really exist, because, quite frankly, I think they're a product of people's imaginations.

>The way to do it is to (finally) establish meaningful, relevant, and
>appropriate qualifications, which are aligned with the technology of
>the real world we live in today, not the nostalgia of the 1920s or 1930s.

Right. So, you support social engineering when its "current" technology, but you don't support social engineering when its "old" technology. I got it now, thanks.

>That is actually, WAY off base, and quite inaccurate ... it is NOT
>"up for amateur radio to decide" ... it is up to the government in
>each country (and to a degree, the ITU, which (sort of) represents
>the collective governments of the world).

The government is too busy holding fundraisers to care about amateur radio. Our elected politicians are as likely to know what is good for amateur radio as they are as likely to know what is good for treating a headcold.

>While incumbents can have input into that decision making process,
>they ARE NOT the final authority, nor should they be.

Isn't the whole purpose of being self-policing that we operate
without government intervention? Shouldn't this same concept be
applied to all aspects of amateur radio?

>Again, this concept of "regulation by consensus of the incumbents" is
>absurd, inappropriate, and just plain wrong.

You're so right. Its much more likely a bureaucrat will know what
"skywave propagation" is, and why it is important to have it on an
exam.

>No, it IS a matter of just that sort of feeling, which is widespread amongst
>the pro-code, "Real Ham," "Complete Communicator" mindset/crowd ...

Funny, Carl, but the only person I see posting messages to these newsgroups
telling everyone how important and intelligent they are, how many patents
they hold, ad naeseaum, is >YOU<.

>NO, NO, NO ... it is NOT up to us to perform some perverted and inappropriate
>experiment in "social engineering" ... realistic, relevant, justifiable test
>and license criteria and qualifications need to be established, but NOT in the
>mode of "regulation by consensus of the incumbents" (which rapidly deteriorates
>into a "haves-vs.-have-nots"/"man-the-barricades" scenario as illustrated by
>ARRL lobbying from "incentive licensing" on).

Right. We're much better off to just let you run the whole thing, because,
as you've told us over and over again, you're so much smarter than the
rest of us.

>Licensing is up to the government, which is *supposed* to represent all of
>the people, not just beepers and QST subscribers (er, I mean ARRL "members".)

The best thing the government could do is lease all amateur spectrum to the
ARRL for $1, and let the league run the whole show.

>the encumbents' desire to "elevate their status" and dominate the arena.

That's "incumbents'" (you seemed so concerned about my spelling errors
last week, I thought I should point one of your own out to you...)

This is wrong! How many people that receive the signal will UNDERSTAND
the morse code? On the other hand, anyone, even a NON-ham with a
scanner or SW radio, will understand the VOICE cry for help!!

The odds of being saved are thousands of times better if you use VOICE
over Morse code! A bunch of beeping tones that got through the noise
loud and clear are completely worthless to the majority of Humans who
would be able to help you, but can't understand morse code. And what is
all this crap about getting through noise in the first place? Are you
asking for help from someone on the otherside of the planet, or to
someone withing a few miles that can actually help you?
VOICE mode will get through JUST FINE!

Hi Lee, then this should be easy. Forward power equals 100w, reflected power equals 50w, and there's no tuner in the 50 ohm coax path. How much power is being generated and where does the reflected power go?

Old post but I'm just now getting it so will answer.

You don't *need* a peak reading wattmeter, it just makes it possible to read the true peak output power in your voice peaks on SSB, where the normal average reading wattmeter will not respond fast enough to the changing levels-the power level follows your voice audio amplitude- and always reads considerably below the peak level.(varies depending on voice characteristics). A peak reading meter has circuitry that 'captures' the peak level long enough for it to display accurately on the meter, assuming of course the unit is correctly calibrated.

> cars and Morse code can be done away with.

I would not be able to rely on a 10 year old car as well as the new one. There are new cars, because no one wants to ride around in a model T Ford when we have the technology for so much better. Morse Code was invented because there were no microphones invented yet, once they WERE, telephones replaced telegraph. Using morse code today, is like washing clothes by hand, using an abacus instead of a calculator, writing on stone tablets instead of paper, using leaves instead of toilet paper.

Why must everyone go BACKWARDS in technology?! If you want the morse code requirement, then you ALSO want all radios to be made with TUBES instead of transistors or ICs! I am suprised that you are actually using a computer and are on a newsgroup! What's the matter, not enough people on the Ham bands to use morse code with?

No question about it, and here's a hint. If you have a HF receiver, Tune in WWV code practice sessions. They transmit daily at 4,7,and 10pm EST on frequencies of 3581,7047,14075, 18097 Khz, among others. The format is alternated for the three daily sessions,and beginning the session with slow code and ending with fast code, on the 4pm and 10pm sessions. On the 7pm session, they start with fast code and reduce to slowest as the session progresses.(This is the Sunday schedule. The fast and slow code times switch to the opposite time each succesive day) I believe you can find their schedule on the ARRL web page, tho I have not tried. It is published in QST.

I like to try the 7pm sessions where the code starts fast, much faster than you can copy, then comes down (they send several minutes of esch speed). Listen for characters in the fast code. Before long you will find that you are hearing letters, and soon short words. As the practice session progresses, and slower code is sent you will be surprised how slow 18wpm sounds. Do this for a few weeks, then go take your test. You may find yourself copying 20wpm. Results, if you will really practice like this daily for a few weeks, are guaranteed or your money cheerfully refunded in full.

Seriously, this is how I got to 20wpm for the extra test in 1970.

_·_· _ _·_ _ _· · ·_ ·_ ·_ _ _ _ ··_· ·_

I need your collective "elmer" counsel as I am looking for a solid HF rig
in the process of rebuilding my shack.
The only semi-modern rig with which I am familiar with is the ICOM 735.
What other ICOM, Kenwood & Yaesu rigs are similar that are in the
same $500. and lower used price range?

Key issues:
1. 160-10
2. WARC Bands
3. Better than double conversion receive.
4. General coverage ok, but not necessary - I'll get a shortwave radio!
5. RIT, Notch, Passband helpful (Though I am getting a NIR-10 to 1help
kill QRM and QRN! I needed similar help with the 735.)
6. Quick tx/rx switching for digital modes, pactor, packet, etc.
7. External 12v power supply vs internal supply - preferred, but
not absolutely necessary (I'm planning to use a deep cycle or gel
with float charger - filtered to keep out noise)
8. SSB (usb & lsb), CW (AM or DSB for 75, and FM would be nice with a
transverter for 6, 2, etc. some day)
9. A few memories, nice, but not necessary (not operator memories,
frequency memories :-) Come to think of it ... never mind!)
10. Decent shape, but need not be museum quality.

Thanks for guidance, offers, etc.!

I have come accross several Watkins Johnson model 107-1 demodulators. They cover .1-10mhz and have provisions for external local oscillator, FM demod, video and a few other features not seen on conventional receivers. They came with DRO-302A2 digital readouts (external) and DRO-309A frequency counters. I would appreciate any info that you can give me on their possible configurations, usefulness, and current value. Thanks.

Welcome to "THe NeWs," the news for the hams and the scanner listeners.

This Week's Topic:

ICOM's IC-T2A/T2E

- I purchased a brand new IC-T2A at $219 CAN + TAX = ~ $250 CAN.

- 2m HT txvr

- transmits 140-150. no mod needed.

- receives 137-174, including WX weather channels (in memory).

- 8 AA batteries fit with this HT (no battery pack...)... comes with 8 AA batteries and charger.

- 1W low, 4.5W high power output

- 40 memory channels

- auto repeater offset

- DTMF transmit

- CTCSS transmit/receive

Conclusion: It is cheap. It's a good radio.

This information is for US version. For other versions, please consult your local ham stores. This is for your information only and I am not responsible for unsatisfaction for the product or any illegal actions arising from this "THe NeWs." (ie. transmit outside band).

As far as outside TX capability is concerned, I strongly recommend this radio for outside band users. No modification is needed to transmit outside TX. Open a box, it's ready. (Warning: Transmitting outside band is illegal if you are not authorized.)

Next week's topic: IC-706 & IC-706 MK II, HF + 6m + 2m mobile radio

Two weeks later: ADI's Territory - AT-600 Dual Band HT

Hello,
I used to run a Packet Cluster Node and had replaced the Eprom that came with the unit with one that was burned with all the parameters needed to run the node. Well, when I decided to take down the node I replaced the original Eprom back into the TNC but placed it in backwards and erased it.

I am looking for someone who is capable to making a new eprom for the unit so that the TNC will work once again.

Does anyone have this eprom or knows someone who has a burner so they can make me a working Eprom for the unit?

Please advise me with information...

Thanks for your time.. Jeffrey - N9MXT

1491. Microwaves? Anyone?

Hello,

This is N0RZU, and I am interested in getting on in the microwave bands here in the South Bay Area (San Jose, CA & Silicon Valley). Anyone out there have:

1. Expereince with microwaves & knowledge about the microwave "scene" in the South Bay?
2. Interested in doing some Microwave work in this area?

Thanks,
Brent

It may be illogical to continue its use. But as long as the majority of
U.S. hams still want it as a required test, democracy should rule.

Hi Lee, I believe if *all* U.S. hams were polled today, not just ARRL
members, the majority would vote to eliminate the Morse code test.
If that happened, would you still say "democracy should rule"?

Yep. I might not like it but that's they way it should be. I'll probably leave ham radio shortly thereafter, though. There are other means of communication. ;-)

[snippage]

Actually it is the correct coax for use with the venerable R-390 and R-390A
HF receivers -- connect the radio directly to a dipole, no balun needed.
The connectors are still available too.

Not real useful for a scanner I wouldnt imagine though.

SB DX @ WW $OPDX.328
Ohio/Penn DX Bulletin No. 328

The Ohio/Penn Dx PacketCluster
DX Bulletin No. 328
BID: $OPDX.328
October 27, 1997
Editor Tedd Mirgliotta, KB8NW
Provided by BARF-80 BBS Cleveland, Ohio
Online at 440-237-8208 28.8k-1200 Baud 8/N/1 (New Area Code!)

Thanks to the Northern Ohio Amateur Radio Society, Northern Ohio DX Association, Ohio/Penn PacketCluster Network, AB2E, WB2RAJ/WB2YQH & The 59(9) DXReport, N2VW, K4MA, KF4OOX, N5FG, KH7RS, W7YAQ, AG8L, K8DD, DL8ZAJ, DU9RG, EY8MM, F6AJA, G3XTT, G4BUE & DX News Sheet, JA1HGY, JE1CKA, LZ1BB, OH2BVE, OH2TA and DL4YT/K4YT for the following DX information.

3B8, MAURITIUS. Jacques, F6HMJ, will be active as 3B8/F6HMJ from November 26th to December 12th. He will be active on all bands.

3D2, ROTUMA ISLAND. The rumor mill reports Ron, ZL1AMO, will be going here November 8th for one week. He will probably sign 3D2RW/R. QSL via home call.

4I, PHILIPPINES. Robin, DU9RG, reports to OPDX that he will be signing with special prefix 4I9RG for the month of November. This special prefix is to celebrate the 65th anniversary of the Philippine Amateur Radio Association (PARA).

5R, MADAGASCAR. Klaus, DJ9DX, and Theo, DJ1RL, will be active from here between November 5-14th. Their callsigns will be issued upon their arrival. Activity will be 160-10 meters with DJ1RL handling the CW and DJ9DX doing the SSB part. QSL via direct or via the bureau. After Madagascar, they will go to Mayotte (see down below).

5X, UGANDA. Mats, SM7PKK, currently signing 5X1Z, states he has just put up a 160m Inverted-L. Listen for him on 1833 kHz. He will be trying the antenna out mainly towards EU in the evening hours around 2100-2200z.

9M0, LAYANG-LAYANG (Update). OPDX has received the latest update from the CDXC (Chiltern DX Club) on the DXpedition to the Spratly Islands which will take place February 12-24th. OPDX InterNet Subscriber will receive the complete press release (long) as an additional bulletin. In short, a multinational group of DXpeditioners, primarily members of the UK's CDXC (Chiltern DX Club), the UK DX Foundation, will operate from Layang Layang Island. The operation is timed to take place soon after the

island re-opens to visitors following the typhoon season in order to maximize the opportunities for good LF propagation. The team is expected to include G3NUG, G3OZF, G3SED, G3WGV, G3XTT, G4JVG, G0OPB, K5VT, VK2BEX, 9M2OM(G3NOM) and 9M6SU. It is planned to keep four stations on the air round the clock to maximize band openings. All HF bands will be activated on SSB, CW and RTTY, and the group will also have equipment for 6 meters. The callsign will be 9M0C.

C6, BAHAMAS. Operators K8DD, AC8W and N8KR plan to be active from here November 25th through December 2nd. Their stay will include an entry as a Mult/Singlr in the 1997 CQWW CW Contest as K8DD/C6A. QSL to home callsigns.

FH, MAYOTTE. After their operation from Madagascar (see above), Klaus, DJ9DX, and Theo, DJ1RL, will be active from here between November 15-28th. They will sign FH/homecall. Activity will be the same as their 5R operation. QSL via direct or via the bureau.

FP, ST. PIERRE & MIQUELON. "The 59(9) DXReport" states Ron, FP5EK, will QRT from here before the end of the year and move to Gandor, Newfoundland (VO1). QSL via K1RH.

KH0, SAIPAN ISLAND. A group of JA operators will be active from here October 31st to November 3rd. Planned activity will be 160-6 meters. Look for the following (operator/QSL info): KH2/JA4DND via JA4DND, KH2/JA1HGY via JA1HGY, W1BRK/KH0 via JA1BRK, WH2Q/WH0 via JI1DLZ, KH0/JA1HYF via JA1HYF, KH0/JR1MLU via JR1MLU.

KP2, U.S. VIRGIN ISLANDS. Jim, K4MA, will be on St.Croix from November 11-17th. His plans of band operations were not mentioned, but he will use the callsign KP2/K4MA. QSL via K4MA. Jim will also participate during the ARRL SSB Sweepstakes as WP2Z. QSL via KU9C.

NEW ELECTED OFFICERS. The following DXers have been elected for the Willamette Valley DX Club for 1998: President - Vince/K7REG; Vice-President - John/W7WZ; Secretary - Bill/AA7KF; Treasurer - Mike/K7NT; Director - Russ/W7LXR and Director - Craig/N7OR.

NO RTTY (A need for support). As mentioned in OPDX.327, Dan, LZ2UU, will be the radioman for a scientific team that will visit the Bulgarian Antarctic base "St. Kliment Ohridski" on Livingston Island in the South Shetland group. Harry, LZ1BB, Editor of The QRP Digest, reports to OPDX that, "There won't be any RTTY activity without help." The Internet Business Center Ltd. supported the expedition with only $600 without any plans to take advantage of RTTY capability of LZ0A. There is a need for more sponsorship to put LZ0A on RTTY. If it does not happen, there will be NO RTTY QSOs. If RTTY fans who would like to help the LZ0A operation, please send donations (payable) to: Internet Business Center Lrd., v.k. Krasno selo, bl.207A-A-6, Sofia-1618, Bulgaria.

POSSIBLE NEW COUNTRY IN THE WORKS? On October 14th, the Nevis Island (V4) administration decided to secede from its federation with St. Kitts (V4), which was formed after the countries obtained their independence

in 1983. It is now required to have a two-thirds majority vote by the island's 5000 voters in a referendum to implement it.

POSSIBLE PREFIX CHANGE? UK amateurs on Pitcairn Island using the VR6 prefix may be switching to VP6. Reportedly, the VR6 prefix now belongs to People Republic of China since the handover of Hong Kong.

QSL INFO AND NEWS.....
FLoyd, N5FG, reports to OPDX that Igor, US1IDX, has won the Bermuda Contest and has been very active as US1IDX/VP9. QSL to Floyd's new address: Floyd Gerald, 17 Green Hollow Road, Wiggins, MS. 39577

Rick, KH7RS (formerly KH6JEB), QSL Manager for K7CXJ who was active from American Samoa as KH8/K7CXJ, reports he still has not received the QSL Cards as of yet. K7CXJ has decided that he wants a nice picture postcard type of QSL card, and the cards have not been received from the printer. The QSLs will go out when Rick receives the blanks. Please be patient and do not resend.

Bill Beyer's home call, N2WB, was listed wrong in the Guantanamo Bay (KG4) announcement. QSL KG4WB via N2WB.

Jean, F6AJA, reports he is NOT the QSL manager for FK8GM nor 6W1AE. He reports reading it somewhere, but did not state where.

QSL for the KH0A operation during the CQWW DX Phone Contest should go to JF1MIA's home address: Takashi Sugawara, 3-4721-13-403 Sobudai, Zama-city 228, Japan. DO NOT use the KH0A address on the FCC database.

SPECIAL EVENT. If you were lucky to work OF0TA from Aland Island during the CQWW SSB Contest, please note the special prefix OF0 was used to celebrate the 80th anniversary of the independance of Finland. The station was operated by Pekka, OH2TA. QSL via OH2TA: Pekka Holstila, Linnaistentie 7, 01640 Vantaa, Finland.

TARL WEB HOME PAGE. Nodir, EY8MM (currently in VK3-land until Novemeber), request DXers to check out the Tajik Amateur Radio League Home page at: http://www.geocities.com/CapeCanaveral/Hangar/5873

TG, GUATEMALA. A group of Finnish DXers will be active from here between January 18th and February 5th (1998). They will arrive in Guatemala City on January 17th. The purpose is to be on the air from the eastern part of Guatemala to gain better propagation to Europe, which is main target. Other regions will be worked without exceptions. The same scale of operation is expected as they had from XF3/OH3JF and others in 1996, with emphasis on low bands (160-30 meters). More information will be published later.

UK & EY, UZBEKISTAN AND TAJIKISTAN. Karl, DL4YT/K4YT, will be making his last trip to UK and EY before returning to Washington for a 2 year assignment. He will arrive in Tashkent late on October 29th, and plans to operate from the station of UK9AA on the night of the 30th. Karl will travel to Dushanbe on the 31st and is hopeful to be able to operate as EY8/K4YT from EY8CQ's big station. He plans to return to Tashkent on

or about November 4th or 5th and be active again as UK4YT before flying back to Frankfurt on the 6th. Karl mentions that he will carry UK9AA, UK8AXA and UK0A QSLs which he has received to take back with him. PLEASE NOTE, from now on QSLs, should only go direct to UK9AA, UK8AXA and UK0A. All of Karl's operations should continue to go via his brother, W2TK, Bob Renz, 366 Rutherford Av, Lyndhurst, NJ 07071.

V2, ANTIGUA. John/K3TEJ, Ed/WA3WSJ and Darrell/AB2E will activate V26KW for the CQWW CW Contest November 29-30th. Their planned activity will be from November 25th through December 2nd, on all bands including WARC badns from 160-10 meters. They will activate the V26B Superstation site of Roy Carty, V21N, so they should be loud on all bands. QSL info is K3TEJ for V26KW, WA3WSJ for V26ED, and AB2E for V26E.

V31, BELIZE OPERATION CANCELLED. Reported in OPDX.327, the group from W5 land that was going to activate Ambergris Caye, Belize, beginning November 7th, has now been cancelled. It has been reported that the daughter of K5KR was killed in automobile accident October 20th. OPDX would like to send out our deepest sympathy to the family.

VP5, TURKS & CAICOS ISLANDS. The group which activated VP5T in the CQWW DX SSB Contest will continue to be active until October 28th. Look for N2VW, W2OF and WA2VYA to be active on CW and the WARC bands signing with their homecall/VP5. QSL to homecalls for N2VW and WA2VYA. W2OF via K2SB. QSL for VP5T go to N2VW via direct w/postage, via ARRL bureau, or by E-mail request to <n2vw@skyhigh.com> for bureau reply.

WP2, U.S. VIRGIN ISLANDS. Dave, AG8L, will be mounting a serious Single Op effort for the ARRL CW Sweepstakes Contest, November 1-3rd. He will be using the famous Windwood contest station and using the WP2Z callsign. He will be active before and after the contest using the call KP2/AG8L. Most of the activity will be after the contest. The QSL route for KP2/AG8L is via KM6ON (now NN6C). Both direct and bureau cards are accepted. The QSL route for WP2Z is via KU9C. This is the new standard route for all operations, and both direct and bureau cards will be answered. Please allow time for logs to get to KU9C from the various WP2Z ops.

VU2, INDIA. Jim, VK9NS/VU2JBS, will be visiting Yannick, F6FYD, who is in India at the moment. He will arrive on November 3rd and be there for a few weeks. They will be active under Jim's callsign as VU2JBS. They are looking to obtain a licence for the Andaman or Laccadives Islands. ADDED NOTE: During this same period, they will try to be active from Bangladesh as S21ZA (VK9NS) and S21?? (F6FYD).

ZD8, ASCENSION ISLAND. Paul, KF4OOX, reported to OPDX he will be transfering to Ascension Island on October 29th (or there abouts). He hopes to be active within a few days, if not the same day he arrives. His callsign will be ZD8V which he received last month while he was down there for a 5 week stay. He plans on being active after work between 1800 and 2300z and on the weekends. He will be active on 20-10 meters. Also, he plans to operate on 6 meters once he receives his 6m antenna. QSL via his home call sign KF4OOX or Paul L. Hutley, CSR 6310 Ascension,

P.O. Box 4915, Patrick AFB, Fl 32925. He also mentions that you can QSL to his parents' house and they will forward it to him: Paul L. Hutley, 298 Logan Ave, Sharon, Pa 16146. Paul also mentions there is another stateside ham on the island. He is Dave, AC4IV, and his callsign is ZD8T. He is on the island for a long term assignment. He tries to be active at night and on the weekends.

1498. Bizzare ADMS & FT-51 Problem

Newsgroup: rec.radio.amateur.misc
Date: 1997-10-26 00:00:00 UTC
From: Matt Staroscik <staroscik@sowest.net>
Message-ID: <3453C9D5.4920@sowest.net>
Source record: 187974

[I should start out by saying that I WILL call tech support - as soon as they are open! It'll be days still and this is driving me nuts, so I had to post...]

I just got the ADMS-1C software from HRO. I split it with a friend, since he wants to program his FT-50, and I want to program my FT-51. Well, the 50 software works fine. The 51 software sems to be all goofed up, though.

When you run the 50 programmer, you see the radio option & memory screens, as promised. When you run the 51 programmer, you get a dialog asking you to "locate your original 51 programmer software for update" or something like that. It looks like instead of shipping the 51 programmer executable, they screwed up and put some other piece of software on the floppy instead.

Has anyone managed to use the ADMS software with the FT-51? If so, when did you purchase your software? Perhaps I got one of a screwy batch.

TIA for any help you can offer.

If you measure the reverse leakage of each diode and they are all within 10 microamps you will be able to get away without the eq resistor across the diode.... the resistor is for the reverse cycle voltage equalization across the diode..... to be on the safe side use resistors.....the caps I have never used with the new style hv diodes. The ARRL claims something like 175,000(?) members and there
are 650,000-700,000 currently licensed amateurs. I'd say that
represents a minority. Or is less that 25% a majority in your book?

Hmmmmmmm....If I correctly read the brief catalog specs on the P38,
Morse/CW is NOT one of it's working modes. Looks like the "Real Hams"
using it will be doing some other digital mode doesn't it? If I'd been
urging him to work some CW, I would have said "Work some Complete
Communicators".

Screw
> the system by giving in to the system? Just how does that work?

Your not just CrACKed, you're badly broken. I suppose we should just
hand out ham licenses in Cracker Jack boxes and forget all about
testing? Why, suddenly, does the system of qualifications that each
licensed ham has conformed to for the past several decades suddenly wind
up **SCREWING** someone who happens to disagree with it? Answer: it
doesn't. If you want to play, pay. If not, hit the road in silence. Or
suffer the (flaming) consequences.

> > >read the true peak output power in your voice peaks on SSB,
I probably should have said that I use an oscilloscope, 'monitorscope'
along with an average reading wattmeter when running high power. This
allows me to see the envelope in a voltage display as well as displayed
on a wattmeter.

Note that when tuning with a continuous RF carrier the average
reading meter will read actual peak output, although you probably will
get a little more PEP output in SSB mode since limited capacity of the
power supply on most ham amps will cause a key-down voltage drop that
will cause keydown power output to be slightly reduced, depending on
just how sturdy the supply is. Since 1400 PEP watts is the most I have
ever been able to squeeze out of my old MLA2500, (still has the original
tubes in it) I don't concern myself too much with running over the 1500
watt limit. The old amp doesn't get much use anyway. I mostly run 100
watts or less, barefoot.

There is a letter on diode protection in the Technical Correspondence column in the July 1997 issue of QST.

The writer says that early diodes could be damaged by a high reverse voltage that results in arcing across the internal junction. Shunt resistors and/or capacitors were used to equalize the voltages. But for the past couple of decades, diode manufacturers have included internal diode protection that makes the resistors and/or capacitors unnecessary.

The last two paragraphs sum it up:

"Equipment builders who want to shunt diodes with resistors should be aware that most resistors have only a 300-V maximum rating. If the reverse voltage across each of the "protected" diodes exceeds this level, the resistors can fail and destroy the rectifier string!

"Shunting capacitors across diodes is _not_ recommended. Momentary dielectric breakdown in capacitors is not uncommon, and this can overstress the other diode/capacitor pairs in the string causing catastrophic failure."

You might want to read the entire letter.

will not divide evenly. If there is plenty of margin on the PIV rating,
this won't be a problem. If the total PIV is close to the actual PIV,
you need to balance. Probably the best thing to do is add more diodes
in series so that you don't exceed the PIV of any one diode even if they
don't share evenly. You'll probaly get away with it, but on paper it's
a failure waiting to happen.

1515. FS: DSP-2232 Reduced w/Warranty

Newsgroup: rec.radio.amateur.misc
Date: 1997-10-26 00:00:00 UTC
From: "n2rif@amsat.org" <n2rif@kwiknet.net>
Message-ID: <01bce20d86969900f08d56cf@Kwiknet.ppp>
Source record: 187991

Hello All;
I am selling "like new mint" AEA DSP-2232 Digital Signal Processor
"Mutli-Mode Data Controller" few months old still under TW warranty
With all original boxes, docs, warranty card, receipt and etc. There is
absolutely nothing wrong with this unit and is basically new out of the
box. Reason is: I am selling all my satellite and amateur gear because
of seriously major financial problems. No More... No Less
Please Re Me Via: email n2rif@amsat.org Or
Packet N2RIF@WM2F.#SNJ.NJ.USA.NOAM.
You can also try calling but my phone is usally busy.
My ph# is 609-386-9382..
I am asking $445 + shipping obo.
Thank you for reading my bulletin. Thomas J or just T.j. -73

P.S. I have stated about TW not sending any of these out nor
selling them at $499 but it appears I have been lied to by TW.
So I am dropping the price. I paid $599.95+shipping just a few
months ago but I guess I've had the "u know whats" put to me.
Such is life I guess..

Exactly what government bureaucracy exists to support the egos of doctors?

Maybe they do, maybe they don't. Does that excuse having a poor test
element? Using your logic, we could just do away with a theory exam all
together because people will "learn" all they need to know after they
get their license.

Don't overlook the BayPac modem by Tigertronics in Corvalis, Oregon. They have an 800 number, but I don't recall it, at moment. Its an outstanding little packet unit for a laptop computer. Runs about $50.00

I have a five pin, 25 watt, 32 channel VHF Motorola Maxtrac for sale. Was used only used for packet radio.There is a female mini plug installed in the side of the head. But other than that, the radio is in excellent condition. No power cable, but will throw in the original 2 channel head as well.

Will consider a trade for a 2 channel UHF mobile rig.

Thank you for reading this post.

Sincerely,
Chris KB2BBW

I believe www.policescanner.com rebroadcasts the Los Angeles Police Department with permission of the police department. Indeed, the LA PD has their own web site and on it they list all their radio frequencies and basically say that they encourage people to listen in to their communications as part of their "community policing" efforts. They want the citizens to be informed about what is going on.

No, more descriptive of a guild system. A system of technical training and advancement that all but halted technical advancement in Europe for nearly a thousand years. It was finally broken by the growing need for labor (people in the trades) as a result of the pelages. There is some analogy to the current discussion.

>Amateur Radio doesn't "desire" anything. Substitute "desired by a
>small segment of ham radio operators" for that phrase, and your
>argument will at least be correctly worded, even if not necessarily
>valid.

Ham radio operators, as a collective, represent amateur radio. Within
amateur radio, there are various consensus that are reached. People with
a common interest or belief. In the past, the FCC has dismissed
proposals for elimination of code examinations with a summary statement
indicating that the "consensus of amateur operators is that they want
code examinations within their licensing system". However, I feel that
pendulum is actually starting to swing the other way.

>>I completely disagree with your second statement. The existing theory
>>examination system does nothing except test ones ability to familiarize
>>oneself sufficiently with the question pool to pass the requisite
>>examination. It tests short-term memory abilities. Nothing more.

>which was long before my time, even. This argument is bogus, as well.

So, you agree with my statement, but claim it is bogus... ? Are you
suggesting that we should continue to allow a broken test element to
continue to be tested for, simply because its been done that way
"for decades"?

>If morse code is so obsolete, then why is the "best" DX always in the
>lower 25kc?

Because DXing is a stupid FREAKING GAME!!!

If they used efficient modes, everyone would run up high scores in a few minutes, then go do something else. So they have to handicap themselves to retain a semblence of macho competition.

>Why aren't these stations always in the SSB portions of the band?

Oh, they trash portions of the voice bands too.

>Could it be that cw allows them to "get through" when SSB won't?

It could be, but if we follow that logic to its conclusion, we'd find all of them using modes which *really* get through better than either SSB or CW. Then they could check the computer from time to time and see how many thousand contacts they had racked up in the last few minutes. That doesn't fit their gaming agenda.

>Could it be they don't have SSB gear available?

According to the pictures we see in QST and CQ, the "best" DX also has the most expensive Japanese equipment and the most elaborate antenna arrays. Look at the huge logistical effort made for Heard Island. Nothing spared there. Also notice that logs were posted to the internet via amateur satellite relay every day of the operation. No shortage of high tech there. But it *wasn't used for the game*. The best they'd trot out for the digital crowd was a few hours of poor old RTTY, no Clover, no PACTOR II. Not sporting don't you know, old chap.

You're spinning your wheels trying to use Dxing as a figure of merit for various communications techniques. It's a game, and it wouldn't have much point if it were easy to win. Baseball would be pretty boring too if we allowed the pitcher to use a cannon to deliver the ball to the plate. Every game would end 0-0. So they handicap the pitcher by making him throw the ball by hand. And football would be a different game (not boring though) if the defenders used barbed wire and machineguns. And Carl Lewis wouldn't be a champion if his competitors used nitro burning Harleys. Gamers don't use the *best* methods, because that would be too easy.

Scott,

I believe good operating practice would dictate that one send three
CQs and then his/her call twice and repeat this two more times.
For example:

CQ CQ CQ de K4WJ K4WJ CQ CQ CQ de K4WJ K4WJ CQ CQ CQ de K4WJ K4WJ K

I operate QSK so that anyone can get my attention by hitting his/her
key while I am sending the above. The above should be the maximum
number or CQs sent. I usually shorten it and pause after the second
group for those who do not know I am operating QSK

Actually, you *may* need a peak reading wattmeter (or equivalent
measurement instrument) if you run near the legal limit. The legal
limit is 1.5 kW *PEP*, so you need some way to measure your
peak output to stay legal. You *cannot* just depend on an average
reading instrument because voice has up to a 8:1 peak to average
ratio, so your PEP can easily exceed your average output, and
by a fairly large factor. With most amps, peaks can easily be more
than twice the keydown output reading.

I am not too sure what the relationship is between the certification
requirements for prospective amateur radio operators and the societal
attempts to provide for self-esteem depending on the career path chosen
by individuals. None the less, I agree with Deignan, amateur radio is not
for everyone.

> It has a set series of goals, and testing standards need to
> be put into place to ensure that people with the skills and knowledge
> desired by amateur radio are the ones that obtain licenses.
>

Yes, and this is the nub of the matter - are those standards appropriate
for ensuring that the individual is a competent amateur radio operator.
In other words, if we are going to bar individuals from being amateurs,
i.e. in accordance with the notion that amateur radio is not for
everyone, then the government agency had better be sure that its
certification standards for determining the individual's competency.
Otherwise, those requirements are unjustified.

> there -- a mode created shortly after CW.)
>

Not the concept of the whether a particular mode is outdated is germaine
with respect to its relevancy to testing, theory testing is not outmoded.
In accodance with the provisions of Part 97, as recently quoted by our

esteemed collegue Coffman, the purpose of the written portion of the examination, the "theory" portion if you will, is to determine if the individual has the prerequisite knowledge for operating an amateur station. The fact that SSB is an outdated technology is, as I pointed out in general, is irrelevant. It is irrelevant because amateurs must be aware as to the potential problems, i.e. the interference potential, of operating an SSB station.

Using that logic, one could claim that since Morse code is used by amateur, that justifies testing of that mode prior to being allowed access to certain bands. But, that logic doesn't hold for the following reasons.

For one thing, if Morse code is so valuable a mode, why is it not required for testing for all of the bands? It has been argued that Morse code is used so infrequently in those bands above 30 MHz that testing for it is not required. Another way of looking at this arguement is that Morse code testing is legitimized due to the sheer numbers enjoying this mode. This justification is problematical because in the recently published ARRL (and discredited by most), Morse code usage was limited to a minority of amateurs. So, here we have one arguement that says the Morse code testing is not required because it is only used by minority of amateurs, while the very same arguement is used to justified testing for HF operation.

The other reason that Deignan's arguement fails is because his inappropriate analogy. The government's legitimate concern of amateur operation when a station is using Morse code is not the use of the Morse code itself, but the on-off keying of the transmitter, which is an even older emission type than SSB. In this particular instance, amateurs would have to be aware of the potential of spurious emissions and the like when keying a transmitter on and off. Therfore, the use of the Morse code (or any other code, for that matter) is not the potential cause of interference. If Deignan were to draw a more correct, the more appropriate analogy would be English is to SSB, as Morse code is to OOK keying of a transmitter. Language is not an interference generator, and neither is Morse code, thus it only makes sense that neither should be tested.

> "If I don't want to use CW on HF, why should I be forced to use it?"
>
> (Hey, if I don't want to understand why my radio works the way it does,
> why should I be forced to learn all this theory crap?)
>

Because if one does not know all that theory crap, then one is unaware of the potentialities of interference, and the knowledge to mitigate any such occurances. Again, whether one wishes to use Morse code on HF doesn't matter.

> "Morse is keeping out millions of techno-geniuses"
>

> (Theory is keeping out millions of techno-zeros too.)
>

Both statements are highly suspect, but of the two, I am more comfortable with the second. If Morse code is keeping out millions of techno-geniuses, that is to our detriment, unless of course one believes that the technology and the capabilities of amateurs should be petrified on a technology abandoned by all other users of the radio frequency spectrum. (I despair of that notion, which seemingly comes to the fore in this newgroup). On the other hand, it is amusing that Deignan would take issue with the concept that a theory examination would bar techno-zeroes from being amateurs because that is exactly what the theory examinations are supposed to do. Perhaps Deignan believes that theory examinations should be dropped so that there are not only boorish behavior on the bands, but such behaviour is re-inforced with interfering with every other user in the radio frequency spectrum? In my own opinion, it is bad enough that we must suffer with our own internal problem areas, I see no need to exand it beyond our own allocations.

> >Disincentives? It seems to me that you don't want any standards for ham

This is speculative at best, and fortunately, very little, if nothing at all to support Deignan's speculation.

> I completely disagree with your second statement. The existing theory
> examination system does nothing except test ones ability to familiarize
> oneself sufficiently with the question pool to pass the requisite
> examination. It tests short-term memory abilities. Nothing more.

So what? The objective of the examinations is to determine if the individual has the requisite knowledge at that time of writing. If Deignan is concerned that this knowledge should be retained, then he should be campaigning for periodic recertification of amateur operators, was one done with professional certificates. Otherwise, he is only crying that the sky is falling.

Dear Jean Philippe,

Your english is far superior to my French, so be comfortable and enjoy
your bilingual advantage.

I have often wanted such a program myself. If should be easy to write
such a program using Quick Basic (QBASIC in DOS 6.2, for example).
Remind me with an e-mail request in about 2 weeks - I may have such a
program written by then or know where you can get one that does the
job. I think the program called GEOCLOCK will do the job also, but
I'm not sure.

I have a Motorola 16 channel radio, that was programmed for me at when I bought it a few years ago. Since I bought it, I have had a problem. All appears well, but on 144.79, the pa powers up at 25 watts, 15 amps, (it is a 45 watt rig) and then powers down to 12 watts, at 10 amps. At 146.85 all is well, with 45 watts, 12 amps. I assume the pa is struggling at 144.79, as it is out-of-range. Without changing all the caps, does anyone have any other suggestions on downbanding the pa??

>1. Can it operate from external power? (I'm pretty sure the answer is "yes".)

Yes - it operates from 12 volts. There's a tiny connector on the top of
the radio, right between the antenna and the speaker/mic jacks. The
connector is the same size as the "2SAT" series.

BTW, this is the connector used to charge the battery... and it's the ONLY
way to charge the battery unless you buy a drop-in rapid charger. There is
NO adaptor to allow you to charge the battery using the "wall plug" unless
the battery is attatched to the radio.

>
>2. Does it have dual single band receive capability, in other words,
>"UU/UV/VV". The manufacturers literature and QST review are both silent on
>this, but a couple of retailer ads (which I don't trust) indicate it does.

Yes, and it works quite well. Minimal additional intermod/loss of
sensitivity. When you make both sides "VHF," you get the same group of VHF
memory channels on each side, and ditto for UHF.

I like mine a lot. They're even better at the current price.

Hey Doc--
But if your Lexus convertible (with top down) breaks down, with dead
batery, and a downpour follows, you will gladly take a ride in the first
Volkswagen Beetle that comes along.

Morse Code was
> invented because there were no microphones invented yet, once they WERE,
> telephones replaced telegraph.

Sorry, no. The telephone was invented in the 1870's (as I remember
reading once) but I know personally that a nationwide radiotelegraph net
in use by all major public safety agencies existed into the mid-1960's.
Transistions take time, sometimes lots of it. One would not expect
anything like such a lag today, but there *IS* going to be a transistion
to the new modes and it will take some time, whatever No-Coders wish.

> Using morse code today, is like washing
> clothes by hand, using an abacus instead of a calculator, writing on
> stone tablets instead of paper, using leaves instead of toilet paper.

No, it's just like taking a ride in a Volkswagen when your Lexus breaks
down. (I know, that doesn't happen often does it? Neither does the
demand for Morse code these days.) Besides, many who did not really
want to, but did bother to learn it, find it is much more utilitarian
that they would have ever suspected, and besides they find it to be fun.

> Why must everyone go BACKWARDS in technology?! If you want the morse

Pray tell who is going backwards? Do *YOU* have your Hal P38 card yet?
Mine is due in tomorow. I'm gonna have some fun, if I can just find
someone else on the air who is similarly equipped. There's not too many
of us high technologists really on the air, you know.

Well, the information was pretty good but the source for the code
practice sure wasn't. This post just not got back to my server (?)
just after Yin made his corrective post (thanks again).

Of course the station sending the code practice is W1AW, not WWV.

Message-ID: <632uip$o2n$1@guysmiley.blarg.net>
Source record: 187916

Alinco DJ-F1T, used only a couple of
times, still has origional box and looks
brand new.

40 memory channels, CTCSS encode, decode,
and scan (easily find out what CTCSS tone
is being used by another), page others
and send messages, DTMF encoding and decoding
with full 0-9,*,#,A-D keypad, is capable of
xmitting up to 5 watts, outer case is
4.3 x 2.1 x 1.5" with battery pack.

tx 144.0 to 147.995mhz,
rx 138.0 to 173.995mhz, and
rx 118 to 136mhz AM after "clip
the wire" out of band modification.

Comes comlete with battery pack, antenna,
instruction manual, service manual (normally
ordered extra), belt clip, and will come in
it's origional box.

Heck, this thing is as close to mint as
you can get.

Asking $250, OBO.

Also willing to do a flat out trade for an
Alinco DX-70 series radio.

please remove the "NOSPAM" from my
address to respond,
Jack Shannon

Source record: 187918

I have a quantity of brand new in the box 586/486 mb's for sale. They have never been used. Quality board, handles all 486/586 chips (Cyrix up to 120mhz, AMD to K5, and Intel to DX4-100).

These are great in your shack for packetcluster and general computing needs if you're running into IRQ conflicts and/or multiple COM port assignment problems often associated with Pentium systems.

Price: $59 (including CONUS shipping) if you pay with credit card or cash. COD, you pay shipping.

Drop me a line: lmenzel@millcomm.com or call (612)861-4565 and ask for Bruce.

Source record: 187919

I'm producing the November "Paper Repeater" ... Newsletter of the Alcatel Amateur Radio Association. In this issue, for family and friends of club hams, I'm compiling a list of so called "stocking stuffers" that family members can buy for their resident ham. Low cost items that would make any ham happy on christmas morning. Any ideas? I'd like this list to contain only items in the $50 and under category, but I suppose up to a hundred bucks is OK. So far, I've just gone through QST, CQ, and 73 ads for ideas ... most of this stuff is available locally through Texas Towers (just north of Dallas, where we are in Richardson), but with enough lead time, folks here could mail order too, hence the November presentation.

TNX and 73,

How so?
Is there a requirement that someone using the Internet use UNIX and/or
TCP/IP? I don't think so.
What was given was an excellent reason for not *banning* Morse code for
HAM use. But then, I don't see anyone trying to do that.

My apologies, I misspoke.

I meant to say that the only poster that makes claims that other posters use
such language in describing other license classes is you. I don't see that
kind of language from anyone else, here. Certainly not in 'original postings'.

I was commenting as to the 'allegations'. I read the same postings that you do
and I only see that kind of language in yours. Maybe you're equating
references to CB opeators as references to 'pond scum' ?

You, of course, only use those kinds of terms in describing 'pro coders'.

One of us may be 'nuts'. I'll leave it up to the esteemed readers of this
forum to decide who :-).

>Kids have a very difficult
>time learning morse code, even through they have total
>comprehension of computers.

I find kids can learn pretty much anything. My 3.5 year old son
constantly amazes me what he can do with the computer I gave him
a year and a half ago. He started out with no knowledge -- today,
he can turn on the computer, boot Windows 95, insert the games he
wants to play into the CDROM drive, clicks on the desktop icon, plays
the game, and finally clicks on Start -> Shutdown -> Yes to turn the
computer off.

All this, mind you, with little to no input from me. Occasionally he
runs into a problem he can't solve, but eventually finds his way around
it (for instance, he figured out how to clear a CDROM error message
from the screen all by himself.)

>The only people who want morse code are the
>"old men who hate children".

Oh yes, absolutely. Now that its getting close to Halloween, there
must be a run on razor blades. I'm sure all these old men are sticking
them in poison apples.

>Where would the computer industry be today if
>we had to learn binary code to obtain a "license" to
>operate a computer.

Probably a lot better off. For instance, give someone a computer and
a modem, and they instantly become an "expert" on the Internet. Not.

Anyone have a lead on interface software for my Ten-Tec paragon? The xpware software I have just tried doesn't seem to work. I am booting my

system with Win 95 for the TNC and radio operating but the reg OS on my computer is Win NT, ver 4.0, this hasn't proven very friendly to the shareware I have found for amateur radio apps. I can live with the Win 95 for radio, but would like to know how others with NT have delt with the problem.

How much do you suppose the AMA contributes to political candidates
each year, and how much do they spend on lobbying? The AMA has
EVERYTHING to do with government.

Bzzzzzt! Wrong. You'll have to wait until someone comes along with a
horse and buggy. Unless you live in Amish country, you're going to
have a long wait.

I'm really sorry about that. I've seen the error of my ways. We
should limit the number of hams severely, so that all the equipment
makers and dealers go out of business. Then hams would get back to
building their own equipment, as ghod and Marconi intended.

Code Forever! Minimum entry requirements 20 WPM, with 30 WPM for HF
access, and 40 WPM for Advanced and Extra Class. Hams will be
retested for CW proficiency once per year. Error-free copy for 5
minutes will be required, and 5 minutes of error-free sending on a
hand key will also be required.

A comprehensive essay type test will be required, covering every
aspect of communications theory and practice, and yearly updates will
be required, so that hams can be shown to be following their mandate
to remain SOTA.

Notarized logs will be required, which must show a minimum number of
hours spent in each of the provisions of Part 97.1.

Yeah, that's the, ah, ticket.

Dear Jean Philippe,

Since my first response I have evaluated several areas that look promising. My attempts at doing the problem in QuickBasic were a failure. I can't to arccos function in QBASIC, apparently.

The best thing I have found is the site

http://members.aol.com/klausevers/qrb_info.htm.

That is an excellent site and it gives you the exact information that you want very quickly. Unfortunately, it is not a program that you can download to your computer.

From the QST masthead:

"Of, by, and for the radio amateur," the ARRL numbers within its ranks
the vast majority of active amateurs in the nation and has a proud
history of achievement as the standard-bearer in amateur affairs.

That self-serving bit of hyperbole has been there for as long as I can
remember, and it annoys me just as much now as it did the first time I
read it.

No one except the prooders have suggested any elimination
of theory testing.

As to code testing, just justify the need to have EVERY
ham know the code o operate HF and you'll convince
me. Having been part of this forum since the .policy newsgroup
started, I've yet to see one compelling and logical reason
to retain code testing as we enter the 21st century.

Those that wish to learn and use morse code should be free
to do so, but there is NO reason to mandate all newcomers
to HF to learn code anymore. Yes, there's an international
treaty, but that treaty specifies NO minimum speed
and, hopefully, the treaty requirment will go away in a
couple of years.

If you followed these discussions for any time, you'd see that
Carl and others such as Gary and myself support more
stringent theory/regulations testing. The artificial
barrier today is morse code knwoledge requirements.

All organizations participate in selfserving propaganda of some sort
in their ongoing efforts of selfpreservation, growth and enhancement,
and ARRL is no different.

It may annoy you, but it is the very reason you have the opportunity
to hold a ham radio license today. We must take care to not be of the
persuasion that would "Kill the Golden Goose". ARRL has never been
perfect and I have, over the years, had serious reservations over a few
actions that have been taken at times by certain officials and the BOD,
to the point of dropping my membership a couple of times. But I always
came back, for I see it as a matter of selfpreservation. It's the only
game in town, our only real mouthpiece and we had better be involved and
see to it that, as members, our opinions and feelings are made known
strongly in Newington, and urge all our ham friends to do so as well. If
they do something yo9u strongly believe is wrong, tell them so. I have.
Any other route is truly a "Divide and Conquer" scenario in favor of our
common enemies/detractors and those who would evict us from our
allocations, for whatever reason.

The attitude you express is a source of serious reservation to me,
regarding the no-code proponents, and it seems to be widely held within
the movement. You do yourselves no favor and your cause no good in
continuing the ARRL bashing, for it just might be that they also see a
change in Morse rules as being potentially good for ham radio. You could
really be drubbing a very strong potential ally in your quest for
change. Think about it, there has to be some really serious review going
on there, on the subject. You might be really surprised. Organizations
change, too. All the oldtime confirmed 'Morse Only' operators and
supporters are gone from league HQ now, moving on through life and
beyond as they have throughout the ham population and the rest of
mankind in general, a trend that shows no sign of changing.

I have almost continuously been accused of being a 'Morse Only'
fanatic on this NG but I, and those who know me, know it isn't so. It's
just that I am am able to see value in it that many of those without my
particular type of experience often cannot see.

Perhaps the _government_ doesn't need us any more, but somebody does.

Let me quote an example of my own.

It was the Simulated Emergency Test (SET) for Tompkins County, NY. It just so happened that the county government's emergency response team decided to have an inter-agency mass casualty incident (MCI) drill, involving a "jet crash" at the county airport (they used an old wrecked school bus as the "fuselage", parked about 100 feet to the side of the runway). As a member of the Tompkins County Amateur Radio Club, I was assigned to work with the Red Cross team that was providing logistics support to the 5 fire departments and 2 ambulance companies involved in the drill. Well, the Red Cross minivan didn't get 50 feet away from the airport rescue and firefighting building before they discovered their business band radios weren't working. Guess who handled all Red Cross communications for the mobile unit? :-) Yep, me in the minivan, and my colleague at the base station in the ARFF building.

Earlier in the drill, I had been at the county hospital, relaying expected patient needs to the hospital for the Red Cross (since they weren't able to use the fire service MED 1-10 communications channels).

When the critique occurred after the drill, one of the issues that came up was communications, and specifically the confusion of inter-agency contacts. Only the Red Cross people didn't have something to gripe about.

> Maybe a new marketing slogan for amateur radio:
>
> "Ham Radio: Communications for you, even after Doomsday".
>
> But, I think my post gets my point across. Digest and comment.

Yep, the _government_ doesn't think they need us any more. But the other organizations that are involved in disasters (Red Cross, Salvation Army, etc.) are probably happy we're still around.

I still keep an H-T charged and ready to go. You never know....

P.S. The airport wasn't closed while the SET drill was going on. I wonder what the passengers in the commuter flights going in and out of the airport thought of all that ruckus (they could easily see the smoking school bus body from their seats on the planes).

I'm looking for a good earphone to use with my HT. Not the usual RS stick-in-the-ear type, but something quality that is unobtrusive and provides good sound. I really would like one with a fitted earpiece like the newscasters have.

I would imagine that the FBI and other agencies have these, where do they get them?

Thanks

Bill

Heaven will arrive the day a harmonized 40m band is authorized.

7.0 - 7.1 for ITU Regions 1 & 3, while the US us saddled with
7.0 - 7.3 BUT can't operate phone nelow 7.150.

That's OK; HOWEVER, it would be considerate for people to
confine phone operations above a certain "lower limit"
which would hopefulle be higher than 7.020, as I heard this past
weekend.

Yeah, yeah, we normally have phone ops hanging down around
7.040 and there are always a few VEs operating at 7.060 or so.

This, however, is simply cruel. The foreign phone
stations will be down in the CW band no matter what, but
my friends, you don't have to ENCOURAGE it by calling

CQ Contest listening 7.025

legitimizing the wiping out of the CW band for people
all over the world. At least for the length of the contest,
that is...

I can't remember the last time a CW contest spilled over into
the phone bands like that...

Admittedly, nothing here is illegal, but if held at least
somewhat in check, it would make the bands a better place.

Hi.

I am interested in IC-706 (old version) modifications.

- any ways to increase 2m power output ?

- any ways to outside TX ? SSB CB ?

I knew that I should have qualified that statement that I made. But no matter what I had said you'd have something sarcastic to say.

Anyway, I wouldn't leave ham radio just because I didn't get my way. I would wait awhile after any change to see if my forecast is true. If the code testing requirement is abolished and I hear more garbage & interference (which I really do expect), then I'll be gone for sure. I won't put up with foul-mouthed jerks, plain & simple. There wouldn't be any sense in having to deal with some jerk that kicks on a 1.5 KW (maybe more ;-)) amp because he/she thinks that they have rights to a particular frequency, that I have already established a QSO on, and the right to use obscene language. I don't care what sked that they had set up. It's rude & illegal (currently) behaviour.

In response to YoMama....
One prime definition of obsolete is "no longer in use."
Obviously, Morse is one of the most popular modes today, and
so therefore doesn't meet the definition of "obsolete."
Especially to QRPers, who form the last line of defense
for ham radio as far as being a technical learning ground
is concerned. QRPers learn the basics of electronics by
doing, which is what ham radio is all about.

Before easing requirements further into the hobby, one looks
hard to see what changes it will bring. Because the changes
of the last 20 years alone have brought us closer to a personal
radio service than "Amateur Radio."

CHINA HAM NEWS 10/28/97
BY1QH Special

Contributed by Lars Melin, SM0KAK
Member, Tsinghua University Amateur Radio Club, Beijing, China

Edited by Rick Niu, BD1QL
MBA '99, Columbia Business School, New York, NY
xn6@columbia.edu

* VHF DX

BY1QH is presently looking for stations who want to try 144 MHz DX, and are located less than 2,000 km away from Beijing in such DXCCs as BY, BV, VS, HL, JT, UA, and, in particular, VK6 (less than 400km from Dampier). The Dampier area is the only location to which it would be possible to make QSOs on 144 MHz using Trans-Equatorial Propagation. Stations interested in working with BY1QH on 144 MHz need to have at least one Yagi (preferably horizontally or circularly polarized), the capability to work on SSB or CW, a good take-off (low horizon) in the direction of Beijing, and a minimum output power of 50 watts.

* EME Report

In the first leg of the ARRL EME Contest, BY1QH worked SM5FRH, SM5BSZ and SM2CEW. The QSO with SM5FRH was the first EME QSO ever from China! BY1QH also heard and identified 11 more stations during the contest. Last weekend, BY1QH worked KB8RQ (first BY to North America on EME!) and W5UN. Also heard was VE7BQH.

BY1QH will participate in the second leg of the ARRL EME Contest on November 15-16. Antenna improvement is becoming urgent as it is not yet wind-proof now. In addition, the club is requesting China Radio Sports Association (CRSA) to clear the much QRMed 144.000 MHz caused by local paging system.

* Contact BY1QH

Tsinghua University Amateur Radio Club is seeking any possible assistance from the international amateur radio community, such as on EME. Please feel free to write to: David Zhang, BZ1BM (bzibm@wg.chnmail.com) or Lars Melin, SM0KAK (lars.melin@era.ericsson.se).

CHINA HAM NEWS is available for unlimited, appropriate distribution.

I bought the ADMS-1C software last spring (April or so) to use with my
FT-50. Later I got a used FT-51, installed the additional executable,
and it worked fine. You use the same cable, but remove the FT-50
adapter from the end.

Perhaps something went wrong in installing the software?

Dave

>(hence that Discovery channel tie-in.)

It is not unlikely that it will happen, but it is rather unlikely that
any of us currently alive will be around to be killed by asteroid
impacts. You can go ahead and build your asteroid-hardened bunker, and
equip it with the latest in iambic paddle technology, but I think if
you cut down on your cholesterol intake, it would do alot more for your
life expectancy.

If the only way we can justify ham radio's existance is by saying

"Well, if a 6 mile wide asteroid mashes the earth, we
will still be able to work DX!"

then it is time to pack it in for our hobby. I think we can justify
our hobby a bit better than that. Ham radio is supposed to embody the
spirit of self education, public service and experimentation, and I
think ham radio can continue to be justified, even in the face of
significant economic threats, precisely on that basis. The burden on
hams is to prove that we are actually living up to our charter.

>Maybe a new marketing slogan for amateur radio:
>
>"Ham Radio: Communications for you, even after Doomsday".

I think you'll be more concerned with "Food after Doomsday". Maybe
"Ham Sandwich: Food, even after Doomsday!"

Well, since you asked, here was one that I stashed away. I realize that
Larry was probably trying to try for humor, and indeed, it does have some
comic elements to it, but I'd hardly call it an admission of my value as a
Technician.

I really wish that personalities could be kept out of this debate. Between
the resident firebrands of Carroll, Roll and Stevenson there seems to be an
ever escalating sequence of personal attacks, which confuses the issues
under consideration and quite frankly, makes both sides look like complete
asses.

If you have to use bare bones equipment, you've broken the number one rule:
you weren't prepared. I have a 5w HT, a TNC and an Radio Shack model 100
that I keep charged up just in case. The whole station fits in a bag, and
gives me reasonable ability to communicate in case of power outtages. I
would much rather have a decent HT with batteries than rely on some
cobbled-together spark gap CW rig.

too expensive for used one.

I bought a brand new ICOM T2A @ $ 219 CAN ($ 160 US).

- outside TX (140-150) (no mod needed)
- 137-174 RX
- 8 AA batteries fit with the radio (comes with 8 AA nicad +
charger)
- DTMF
- CTCSS
- 40 channels
- 4.5 watts
- 3 x 5 x 2

---

the rigs are getting very cheap now... we can get a new HT for a
hundred. we can get a HF for a thousand.

I disagree. I pay my dues, so I have every right to criticize the organization. I can vote, you say? Well, no, I can't. In the 20+ years I've been a ham, there's NEVER been an election for Idaho Section manager. The SM runs unopposed. When he retires in midterm, a replacement is appointed, who then runs unopposed the next year. We've gone through this scenario several times. We should get a ballot where we could write in a candidate, or, at the very least, vote "No" on the one "approved" candidate.

Imagine the uproar if US or State elections were run this way.

>change. Think about it, there has to be some really serious review going

Hi. I started to operate 2m and 6m CW + SSB.

I would like to know the "regular" distance that you can communicate
by using SSB + CW.

I've heard that your 2m SSB signals can be heard 6 times away (usually
?) compared to that of FM.

Thanks for your help !!!!!

I agree, their are over ten million scaners in use. That is in theory at
least 10 million people. The NRA has only 2 million but their organized
and very vocal. The scanning community must write letters to their
congressman

Hi! I bought one of these HT's at a hamfest a couple of months ago, and while I did get a copy of the normal owner's manual, it doesn't cover a lot of the "undocumented" features of this radio. Particularly troublesome to me is the fact that I've somehow gotten it into a mode of operation where the LCD scale does not display the relative signal strength of received signal, it just shows one bar, no matter what the signal strength. I've tried all variations of button presses, and cannot exit this "stupid" mode of operation. The manual I DO have mentions that the more advanced functions are covered in a booklet titled "Tech Talk" and is/was available at Icom dealers. Does anyone out there have a copy of this booklet? If so, is there any way you could assist me in my plight? A copy of my own would be great, but not knowing the volume of the volume (pun intended) I don't know how much of a hassle that would be. I am able to receive electronically transmitted copies so a scanned copy saved as a word processing document or even an Adobe document would be quite useable. Thanks in advance!

Dear Jean Philippe,

Since my last response I have found a program called MathCAD version 2.50 that does an excellent job of calculating bearing and distance. You have to type in the equations and values and it calculates the answer.. You can then save it so that on each subsequent usage you only type in the new Latitude and Longitud of the distant place.

Do you have access to MathCAD? If not I can make a copy for you if you send me an e-mail requesting it.

Well, that's certainly a compelling reason for making everyone do a compulsory Morse Exam (except that it isn't required for the largest part of the spectrum AND I'll bet more people have trouble with the PTT switch than the microphone ;-]).

Mark.

I was actually trying to come up with the simplest response I could find without regard to its veracity... ;)

Incidentally, I have decided to give up on the Morse testing argument. I have a life that includes getting on the air and actually using CW. I don't even care what the no-code whiner-babies want anymore. They have become fanatical about this thing and now it's time for me to jump out of their way as they head back into the proverbial brick wall.

I am really starting to believe that mental health is becoming the real issue here. I'm in favor of dropping this crap and getting back to r.r.a.p. and r.r.a.m. Oh...GEEZ! r.r.a.m. Rec.Radio.Against.Morse. Sheeeeeit!

I believe that having 15m, 12m, and all 2.7MHz of 10m is better than 11m.
BUT I VERY RARELY HEAR ANYONE ON 12METERS, even though it is wide, wide open!

The 10meter wasteland...
When was the last time you operated between 28.6 and 29.1 MHz?
Half a megahertz or more of vast wasteland.
Even most 10-10ers have given it up.

10m has a very tiny bit of activity, and the FM repeater band around 29.6 occasionally gets pretty confusing when 3 repeaters are keyed up at once! 28.0 to 28.18 has very little activity.

Let's face it, there are not enough hams these days to keep the Spectrum Gobblers away. Unless something radically different happens, the number of hams on HF will continue to erode.

But the fact is, if you listen at all to 11m these days...
When conditions are good around the world, there is quite a lot of good activity from 26.33 to 28.99.(By the way, there are legally assigned "CB" services in this entire range.) For some areas of the band, there is a signal every 5kHz. Present activity on 11m consists mostly of radio operators exchanging signal, equipment, antenna, and weather reports, and talking with family and friends. Doesn't that sound amazingly similar to 10m when you think about it?

It is good to have activity on HF by lots of common people using simple analog voice radios throughout the world. This preserves the spectrum from encroachment. You might call it a "place-holder".
The alternative is that it will be auctioned away to some digital frequency-hopping or spreadspectrum commercial transponder service which will get a taste for more HF spectrum and start eyeing 1.8,3.5,7,10,14,18,21,25,and 28 MHz as well. They'll start with a tiny, little, itsy, bitsy, "time-shared" piece. "It's only a 40mSec transmission". Pretty soon we have an S7 noise level, but it's not from your neighbor's touch-lamp, or the power company. Look around, it's

already happening!

Spectrum is the essence of true freedom and is everyone's birthright.
Ever heard the saying "the Public's airwaves"? That's what the media
calls it right before the FCC auctions it off in the USA.

1630. China on EME

Newsgroup: rec.radio.amateur.misc
Date: 1997-10-28 00:00:00 UTC
From: K0HB@JUNO.COM
Message-ID: <878060884.7514@dejanews.com>

China on EME!

BY1QH, Beijing, confirmed three 2-meter QSOs on EME on Saturday, October 18, and Sunday October 19, 1997. The Tsinghua University Amateur Radio Club station ran 200 watts into a 4x9-element Yagi antenna.

In the first EME experiment, David, BZ1BM, and Lars, SM0KAK, had hoped to work VE7BQH and W5UN from BY1QH, but failed. They did work into Europe and QSOed with three SM stations. David and Lars also heard some DL, 9K and JA amateurs on EME, and are planning their second experiment shortly.

Please direct your interest in working with China on EME to David (bzibm@wg.chnmail.com), the student president of BY1QH.

Yeah...isn't that the pits! I have NEVER seen an original PRINTED manual on the Uniden radios, it has always been barely usable photocopied manuals and schematics.

I have to laugh when people ask for a photocopy of the schematic on the net. The "originals" are barely usable all by themselves!

I ended up waiting so long for Uniden to send me the $25 copy, I gave up and bought the RF Parts $12 copy. Then the Uniden arrived, confirming Murphy's Law yet again!

I think the price is around about 20-bucks now......$$$$$
If your Pro2006 is an early one with the DIM function only,
you can modify it to turn off like the later ones with the LIGHT
button. Just remove surface-mt resistor R-505, 47ohm.
You need to remove the shield from the logic board to get at it.
It will then only light when you push the button in, the
DIM position just like the Later model.

1633. FS: Sams Photofacts $1.00/set

Newsgroup: rec.radio.amateur.misc
Date: 1997-10-28 00:00:00 UTC
From: vintel@aol.com
Message-ID: <19971028200800.PAA09486@ladder02.news.aol.com>
Source record: 187958

Following complete Sams SETS available at $4.00 for each set.
(Not per folder but per each full set- usually 16 or more folders)
Quantity price: 25 to 49 sets $3.00ea, 50 to 74 sets at $2.00ea, 75
to 99 $1.50 ea.

100 or more sets ordered & shipped at one time $1.00 each.

All prices + shipping from Baltimore, Md. Weight is about .8lb/ set
1 or 2 sets can be mailed in the USA for $3.00. 3 or more will go
by UPS. (If you only want certain folders, not whole sets, about 30
radio folders can be mailed for $3.00)
* indicates an incomplete set.
Inquiries & orders to vintel@aol.com

This is false. In 1912 amateurs were banished to wavelengths below 200m.
It was the hams who discovered just how valuable that HF spectrum was,
and because of that, at ever international radio conference in later
years, it was reaffirmed that amateurs would retain their (very valuable)
HF spectrum (although we can mainly thank the ARRL for that - it was
their presence on the American delegation at each conference that really
insured we kept what we originally had).

Just in the last decade and a half, we've been given new HF spectrum.
Our only loss was 11m, and that was due to disuse.

Why is it that all the "amateurs" would like to see this nocode
thing abolished?are they "elite"?
Its been my experiance that the most dangerous type of person is
one who *thinks* they actually *know* something.
Because they had to know code to get their liscenses,they think
eveyone else should also.
Absolute Rubbish.
Afraid of a little common sense?

Hi Kevin,
Bob is talking about glass tubes like 3/8 to 1/2 inch diameter
that have a low boiling point liquid in them. They are made in
the form of letters in a sign that has a light in the bottom
for illumination and a heat source. The heat boils the liquid
and bubbles rise in the tubes.
If you see any bubbling radio tubes (valves) let me know.

Nothing technically-motivated about it. More like SEEEEEE-Q DEEEEEE-X
related. You just want to get on the air and yell into a microphone,
and you're pissed because your life experience doesn't give you a
"Get Out Of Morse Free" card.

It is rude and illegal behavior, today done by people who are Morse tested
and mostly long term licensees who took their exams in front of the FCC.
And it isn't going to change as long as there is no *enforcement* of the rules.
License exams have virtually nothing to do with that. Getting the FCC to *do
their job* has everything to do with it. This is the *exact* same thing that
happened to CB. The FCC *quit enforcing the rules*. Before that, CB was
a relatively well behaved service even though it never had license exams or
Morse speed tests.

Testing can ensure that people are familiar with the rules, and the means
to comply with them, but it can't make them *obey* the rules. Almost
everyone now on HF *knows* the rules, they just don't *obey* them.
The only sure way to get obedience is quick and sure enforcement. We
don't have that anymore because the FCC has *quit doing their job*.
Piling on irrelevant tests won't alter that. The only way to alter that is
to generate political pressure to get the FCC to start *doing their job*
again.

That's true to some degree. We have to be careful about generalizing here, though. There are still quite a few decent people in ham radio. Usually it's a small percentage of people that are actually causing real problems. And the rest of us end up "paying" for it.

> And it isn't going to change as long as there is no *enforcement* of the rules.

Definitely. There are still a few hams that abide by the rules. I like to think of myself as one of them. And I don't talk to some local hams because of their on-air language & even because of "minor" violations of the rules. One example: exceeding the CWID rate as set in Part 97. Another: controlling a 2 meter repeater via 2 meters.

There you go generalizing again.

1644. SCRRBA Meeting Saturday 11/1/97

Newsgroup: rec.radio.amateur.misc
Date: 1997-10-29 00:00:00 UTC
From: ac6vv@geocities.nospam
Message-ID: <ac6vv-2910972115160001@ppp-206-170-215-167.lsan03.pacbell.net>
Source record: 187821

Here's an announcement sent out to the packet BBS's in So Cal:

> 4982 B# 617 COORD KD6LVW ALLLAX 971029 SCRRBA Meeting - Nov. 1
>
>Forwarding path: KB6NJF K6VE K6VE N6YN
>
>SCRRBA, the frequency coordinating body for 6m, 70cm, and higher bands, is
>having a general meeting on November 1, starting at 9:30am (check-in 8am).
>
>Location: Harvey Mudd College, Galileo Hall, Claremont
> (Foothill Blvd. & Dartmouth Rd.)
>
>Agenda items include: 12.5kHz splits for 70cm, election, NFCC stuff, etc.
>
> MSG # 4982 from KD6LVW @ N6YN.#SCA.CA.USA.NOAM

If you have a beef with the coordinators of the 440 MHz band in
Southern California, or just want to hear and be heard on subjects
relating to frequency coordination, you should plan to attend this
meeting. Note the early starting times.

This is the group that brought us 192 out of 200 frequency pairs
reserved for closed machines (OK, since last month, only 191...).
These are the folks who make all their decisions based on the vote of
the amateur community -- meaning owners of coordinated repeaters only.
(Their words, not mine).

There is a proposal afoot to double the number of frequency pairs in
the 440 band by using "splinter" 12.5 KHz spacing. There is also a
lot of pressure for SCRRBA to bring their operation in line with other
coordinating bodies (every member can vote, etc). Last time I heard,
SCRRBA will oppose both changes.

If you care, BE THERE!!!!!

On the surface that sounds like a good idea. However based on my 30 plus years as a amateur and 17 years with computers, I have noticed one major problem with that idea.

Those who know the morse code, eg code and theory classes, will often try to help those who don't know it to learn it. Added to that they seldomly asked to be paid to teach the subject.

Those who had a strong knowledge base in programming languages and like to write programs seldomly will try to teach their craft to others. Also, after a program has been written most people don't want to give it away. Granted we do have freeware and shareware but that has often been the source of viruses.

In Canada, during the very eary 80's, we were given the digital licence. When they changed the licencing format around 1990 they discovered there were only about 250 digital licence holders, of which 150 were already amateurs.

The site http://www.iw7chv.org has been modified. For who already knows
about it will find really interesting news, explained with a functional
graphics to quickly understand what are the services offered. I say
someone for who go to see it the first time:

- HamRadio Search Engine: with over 10000 entries is the most complete
HamRadio Search Engine. You can search/add/modify your URL. It's also
possible to put a banner the first page of the gate.

- Internet <-> Packet Link: You can send mail between Packet Radio
Network and Internet. The service is in testing way..test it.

- Internet Radio gateway: you can browse the gate reading the Packet
bulletins around the HamRadio World.

- TOP 10 HamRadio Site: TOP 10 permit you to vote your favorite Ham
Radio URL and suggest your one.

An more ... HamRadio news, POWWOW community, meteo page, etc. ...

I guess this response relates my reply and I find it quite puzzling
because I can't see anything fanatical in either the original message or
my response to his reply. Even if his original response was or wasn't
meant to be in jest, I don't see anything in my reply which should have
set off this outburst, even if a smiley hadn't been used to indicate a

light hearted response.

Settle down, Mama, your personal bias is showing. Do you suppose you had any influence in your kids not "taking to" the code? You surely didn't "telegraph" your dislike did you? Did they say "We don't like it" because they were sure you would give them a sucker if they said that, and if not, something sour?

Children, first of all, enjoy doing what MAMA does, that's how they learn. If you really want them to learn code, I'm sure they will do that for you, just as easily as they knock it for you.

MY (grand)son, age 10, seemed to like it. Wonder why? Could it be because I like it and that I built and gave him a computer last summer? The promise of a reward is a strong incentive for a child, either way. Adults too. That's why all these folks are in favor of the no-code license. It's (code)free.
Good Parenting,
Dick W0EX

Depends on what country you're living. The possibility to transmit
outside the ham-bands is legal in Holland, however it's forbidden to
use the possibility.

My 706MK2 transmits from 150 kHz to 54 MHz, and from about 136 to 200
MHz, everything legal. I didn't do the mod by myself, I asked the
ham-store to enable this option when I bought it.

Please don't take my post personally.

Yours was just a springboard I used to divorce myself of this rediculous never-ending verbal battle. :) I don't see why my post is called an "outburst." I didn't feel charged when I wrote it. Just tired of reading and hearing the same (talk about old) comments worded differently day after day after day..and for more than four years now. Who put the Eveready batteries into this thread anyway?

I have a Kenwood MC 80 mic for swap.It's about 4 moths old.Built in preamp.
Would like to swap for hf vertical,or tnc.Will consider other trades.
Thanks
Jimmy

1663. Question abt rain and SWR...

Newsgroup: rec.radio.amateur.misc
Date: 1997-10-29 00:00:00 UTC
From: FredAdrian@modempool.com
Message-ID: <878137119.2398@dejanews.com>
Source record: 187893

Hello:

I have an MFJ twenty meter folded dipole mounted as
an inverted vee.

When it's sunny out, the SWR is about 2 to 1 at the low
end of 20 meters, and about 1.8 to 1 on the high end.
However, when it rains, my SWR becomes much better.
About 1.5 to 1 at the bands ends, and about 1.2 to
1 in the middle of 20 meters. When it snows, I
get a nice, flat 1.1 to 1 across the whole band!

Just curious to know what might cause this. Does
the rain/snow on the dipole cause the wire to
artificially become larger and thus creates a more
broad-banded antenna?

Hi Roger. Yeah, I also prefer short calls -- like 3x2 or 3x3. I did find the comment about styles interesting though. I think it's very true that we all have our own approaches -- and I ran into a comment in the 1976 _Radio Amateur's Handbook_ suggesting that horrendously long calls were good practice if one had QSK ability, to the extent that the caller would only stop when interrupted. Which I thought was weird.

1666. CW - Pros and Cons

Newsgroup: rec.radio.amateur.misc
Date: 1997-10-29 00:00:00 UTC
From: kevpam@nospam.agate.net
Message-ID: <345756b0.11236611@news.agate.net>
Source record: 187896

Hi,

Here's my first posting. I am currently a no-code tech. I *am not* a "whining no coder" as I have seen in previous postings. I have been licensed for 2+ years. I haven't learned code - whether I ever do or not is immaterial. I am licensed by the FCC and I have privileges to operate in the Ham bands. I can't operate in the HF bands. Do I really want to? Maybe. Isn't in the cards at the moment. Will it make a difference if the code requirements are dropped? No. Will I upgrade if I have to listen to the name calling. Bet your boots I won't. I have been around Ham Radio enough to know, that isn't what it is supposed to be all about. Start calling no coders "whining no coders" and you have just taken the first step toward turning the ham bands into what 11 meters became. Instead of name calling, see if you can find mutually agreeable solutions.

>few, I'd say.

I've always heard that the HAM bands were given to
amateurs in return for their learning skills (like
morse code, electronic/technical theory) that
would allow them to get on the air starting with
a pile of parts scavenged from debris in an
emergency. I don't see someone coming up with
an all-digital over-the-air network from scrap
parts. CW and simple equipment is much more likely.
The reward for that effort is bands that other
people want.

Arguing against Morse because it is obsolete should be done with great
care. HF is obsolete.

The reason for Morse code requirement was a dumbing down of the original
requirement which was a practicum of building hardware. I think the
Morse requirement should be replaced with the more applicable practicum.

From: wdr@world.std.com
Message-ID: <EItv7s.F1t@world.std.com>
Source record: 187904

Andrew M Cohn was
> Looking for "visitor-friendly" 2-meter or 440 repeaters
> in downtown Boston ... convention center ... low power

I see two replies have mentioned our super-repeaters on 2m, .23 and .64; don't know if either emailed; if it's a low-power dual-bander, you won't hit Waltham 146.64 from street level with less than a watt (takes 2-5 and either a hot-spot or a real quarter wave) but should be doable from a west-facing hotel room, ditto Waltham 449.075 (88.5).

All repeaters here-abouts follow bandplan, in that inputs are where you expect them. Very few closed machines, very few PL on 2m. Generally friendly. Waltham 64 is very active (with very fast keying!) during drive-time; some days the discussion is political debate, like Sunday Morning TV talking heads, all points of view shared and respected; some days highly technical; some days just rag-chewing or bad but clean jokes (fridays and late drive). Public-safety folks chat during/after drive time on Boston 145.23-. Both machines have one or two nets a night, of varying sorts, with plenty of time for casual use in between.

Hope to hear your callsign while you're here -- you didn't indicate when?

73 de N1VUX

Extracts for "BOSTON" from web-pages I've snap-shot, with my comments (looks like the list was seeded from ARRL directory?):

2m.html:Boston MA 145.230 - KA1IG ox
usually has PL of 88.5 these days
club Call is now W1BOS, and has new trustee (rest of the calls in this list are suspect -- many clubs did 610v, or changed trustees too)

2m.html:Boston MA 145.310 - W1KBN o
NU ARC, college club; PL is 123 when on. It'll be friendly if anyone is listening -- under used.

On 440:
440.html:Boston MA 447.175 - N1CGF oe 88.5
Downtown, friendly
440.html:Boston MA 446.575 - KC1HF oel 88.5
In a linked system -- to Maine and Rhode Island! NETARC
I believe this is downtown; I've hit it from several miles out on 350mW.
440.html:Cambridge MA 449.725 - W1XM eo 114.8

MIT UHF club repeater; custom is to use it as calling frequency
only; this is right across the river from the convention center
on the only tall building on MIT, no problem hitting it!

From a hotel room facing north or west there are other things you'll
find by scanning. 88.5 is usually the PL for 440, Braintree EMA and
MIT are only exceptions I know of. 2m PL is rare and random.

Passing the written tests is a fairly trivial exercise for someone
with either good study habits, a small investment of time, a computer
program with exam software for drilling, etc. With public question
pools, there is no incentive to have people learn the actual theory --
the incentive is to merely study the question pools sufficiently to
be able to recall the correct answer from short-term memory. This is
not the type of radio operator I believe we should be encouraging.

Fred, You didn't say what your feedline is, but I'd bet that the rain and snow are increasing the losses on your dipole and possibly on your feedline. The forward wave from your rig to the antenna loses power by heating up the dirty moisture. The wave reflected back from the antenna also loses power on the way back to the rig. What does the SWR meter see? A reflected wave that is smaller than what would be there under dry conditions. In other words, a lower value of SWR. You may have a lower SWR, but is it harder to make contacts? 73, Bill N3WK

You bring up some valid points. It's too easy to get a ham ticket. The entry level ought to be 30 WPM Morse, with a retest required for each renewal. That ought to weed out a lot of the riff raff om 20m, right?

And the theory is too easy, too. The questions ought to be written in a "universal" language like Esperanto. You never know when you might need to have a QSO with a ham who only speaks Esperanto.

> Get off your butt, learn morse code and quit whining.

Get up off of your butt, learn the Esperanto language, and quit whining.

Which brings up an interesting point, if there are enough of them to 'wipe out' the CW portion there must be alot of them, anything that generates activity on the air has my vote. The bands werent 'wiped out' they were very much in use!

Is it unacceptable to some? yea, but demz da rulez. It's the one time of the year that I can actually have fun on 80m without listening to the bullshit nets every 5 KC's

> to think of myself as one of them.

Certainly. I'd say that the vast majority of hams abide by the rules.
My experience is that often the people that complain about wanton
lawlessness are really just being too sensitive, like complaining
that someone has an automatic CWIDer running at 22 WPM, for example.

> And I don't talk to some local hams
> because of their on-air language & even because of "minor" violations of
> the rules. One example: exceeding the CWID rate as set in Part 97.

Oops. Never mind.

;-)

Dana K6JQ
Dana@Source.Net

P.S. When is a CWIDer allowed to operate faster than 20 WPM?

1684. Re: HTX 202 Good or Bad ?

Newsgroup: rec.radio.amateur.misc
Date: 1997-10-30 00:00:00 UTC
From: ag001@lafn.org
Message-ID: <1997Oct30.165117.28425@lafn.org>
Source record: 187765

I agree. The HTX 202 is a good all-around workhorse, but without bells or whistles. I've talked from Israel to 4 Mediterranean countries on it using only 5 watts and I was told the signal sounded good. I did get the E1 error a couple of times, but now that I know how to reset it, the problem is not bad. The instruction manual that comes with the set, though, is written poorly and leaves much to the imagination.

Nope... I'm NOT living in the past! This is what happens when some idiot, like me, does not proof read their material. By-the-way, while I am doing this message - I would like to throw my two cents worth in on this debate about the 5 word per minute code for all hams:

1) Even in today's modern technology -> CW is still the most efficient!
2) Amateur Radio Operators should -> Be capable of utilizing it well!
3) Every tool is an important tool -> A full tool box is the best box!

I am by no means, a CW fan... BUT as a trained electronics technician, it is important to stress that CW has the best signal-to-noise ratio. That's reason enough to maintain our current requirements.

Source record: 187769
Cross-posted to: rec.radio.info,rec.radio.amateur.misc

SB QST @ ARL $ARLB064
ARLB064 FCC to open Gate 4

ZCZC AG64
QST de W1AW
ARRL Bulletin 64 ARLB064
From ARRL Headquarters
Newington CT October 30, 1997
To all radio amateurs

SB QST ARL ARLB064
ARLB064 FCC to open Gate 4

FCC opens vanity Gate 4.

Christmas will arrive a bit early for General, Technician Plus, Technician and Novice Class hams. The FCC has announced that vanity call sign program Gate 4--the last vanity gate--will open December 2, 1997, for General, Tech Plus, Technician and Novice class hams to request a vanity call sign on or after that date. The potential number of applicants from these four licensee groups is huge--well over a half million hams.

Applicants may use either the electronic Forms 610V and 159 on the Web or hard-copy Form 610V and 159--but not both. Both versions--plus fact sheets and answers to frequently asked questions--are available at http://www.fcc.gov/wtb/amateur. The application fee is 50 dollars, payable by check (to ''FCC''), bank draft, money order or credit card. Do not send cash. The FCC gives processing priority to electronically filed Forms 610V for which the filing fee and Form 159 have been received. The FCC now requires all vanity filers to include a Form 159, which must be mailed to the FCC with your fee.

It's up to applicants to make sure that their applications do not arrive before December 2, 1997. The FCC will return all applications that arrive early. All other vanity call sign gates will remain open, and Amateur Extra and Advanced class operators continue to be eligible to file for vanity call signs under those filing gates.

Any call sign requested must be appropriate for the class of license you hold. This means that Technician, Tech Plus, and General class licensees may ask for a Group C (1x3) or D (2x3) call sign. Novice class licensees may only request Group D call signs.

Electronic filers must mail the Form 159 Fee Remittance Advice to FCC, Amateur Vanity, PO Box 358994, Pittsburgh, PA 15251-5994. The Form 159 and the fee must be received within 10 days of electronically filing your Form 610V or your application will be dismissed.

Those filing on document Forms 610V and 159 must mail the application package containing a completed Form 610V with a copy of your license attached, Form 159 and the proper fee in a sealed envelope to FCC, Amateur Vanity, PO Box 358924, Pittsburgh, PA 15251-5924.

Application packages via courier or delivered by hand must be prepared in the same way, sealed in a second, outer envelope, and addressed to Federal Communications Commission, c/o Mellon Bank, 525 William Penn Way, 27th Floor, Room 153-2713, Pittsburgh, PA 15259, ATTN: Wholesale Lockbox Shift Supervisor. This address should only be used for applications delivered by hand or courier.

For general information, call the FCC's toll-free National Call Center, 888-225-5322 (CALLFCC).

Please feel free to spend a few minutes and find posts that make
reasoned arguments for removal of the theory tests. The *ONLY*
way in which I've seen it mentioned is as a red herring by someone
promoting code testing. Proving Bill and I wrong should be quite
simple. Your argument goes along your lines, "they want A
removed, so it logically follows that they want B removed." Unfortunately,
every time this faulty line of reasoning is tried, it is rebuked
and never supported. Find the support for your red herring by
anyone that wishes to remove Morse Code speed testing, if
you can.

It appears one of our resident dinosaurs has made another bellowing noise. Perhaps it is that he senses the approach of the asteroid. No, more likely he is just shifting his bulk to a more comfortable part of the tar pit. Certainly his tiny brain could not conceive of anything having to do with the future.

He is firmly mired in the past and has no conception of the popularity and meaning of such terms as "deregulation". That is a very good thing, improving productivity and competitiveness by getting the weight of dinosaur droppings off the backs of people. But his tiny brain doesn't comprehend the concept of freedom of choice and freedom of action. The tiny furry creatures lurking in his shadow do, though, and they will eventually rule the world in his place.

Yes I do live on an estate. (a little one :)) What of it? (Dad went to Stanford; I'm a UCLA and USC alum. Do you care?)

Fact is, your post, above, means nothing. You didn't make a single argument in favor of Morse Code. You didn't try to rebut the fact that the number of hams there are, despite your half-witted comment to the contrary, makes a helluva lot of difference with respect to how much political clout we have. With other radio services hungrily eyeing our band allocations, I happen to think that is important. You do not. I agree with one thing that you said: your posts do indicate the value of a good education: by showing what happens when a person lacks the same.

Well Mark,

Your ht is good for line of site..... If you are not in range of a repeater it's not going to get out more than a few miles unless you are on a mountain top..... That old spark gap cw rig, although quite dirty could have world wide capability.

If they are hidden, how do you know they exist? What you really
meant was that you haven't a clue what other people want beyond
what they say. Apparently since they don't agree with you, you
assume they must have an alterior motive. Sounds like delusional
paranoia to me.

>And I will watch for said posts just so I can rub it in your face.

In other words, you can't find such posts because they don't
exist. The only face getting rubbed is yours.

1699. Re: What people just don't understand about Morse

Newsgroup: rec.radio.amateur.misc
Date: 1997-10-30 00:00:00 UTC
From: Vincent Biancomano <103520.355@CompuServe.COM>
Message-ID: <#e1KMyU58GA.315@nih2naac.prod2.compuserve.com>
Source record: 187780

What people don't understand about Morse is this:

"The code issue has little to do with whether it gets through
when other modes do not, whether it is a useful mode or not,
or whether new hams should "pay their dues" as their
predecessors. The issue is whether this Service should tolerate
a further easing of requirements, both code and theory, to save
a hobby that, under the circumstances, might not be worth saving.
The issue involves deregulation, pure and simple, and it will
be a durable beast."
--Former ARRL President Vic Clark, 1982

Of course, Clark wasn't saying that Morse isn't useful. What he
WAS saying is that the actual issue has to do with deregulation.

> Gene- KF6CTS

Just bought my TM-V7A from them, mail order. Ordered Thursday afternoon,
they said it would ship on Friday, received it the following Wednesday.
Just about right from L.A. to the "boonies" of Idaho.

I bought my first rig from them years ago when I lived in the L.A. area.
They were really good to deal with in person. They seemed to have the
best price for what I wanted this time as well, so I called. They were
very nice over the phone. They wanted to know my call sign and asked if
my address was correct with the FCC (they were just going to get my
address from one of the web sites). I told them it was mostly right, but
since they finally got around to naming roads in my county (last month),
it wasn't really quite correct. I told them the new official address
and they sent it to that one.

All in all, dealing with Jun's was a completely positive experience...

Hi Jeffery,
On OH2BUA's Web cluster is a link to some dxcluster software to download.
The program DXTELNET seems to work well.
The address is http://www.client.fi/~jukka/webcluster.html
all the instructions should be there GOOD LUCK Peter VK4VW
vk4efxdx@mail.cth.com.au

>weekend.

It used to be that CW had 7000 to 7050 clear and DX SSB stayed 7050 or above. Now packet, Pactor, Amtor etc have taken over 7060 to 7095 so DX/VE SSB have no where to go even when a contest is not on.

With a contest such as the CQ WW DX SSB is wall to wall from 7040 to 7100 (estimated that 700 to 800 stations are on at 0300Z Saturday)..so if you have the ability to run DX from the USA then you listen where its possible to hear...7030, 7025 etc. I ran 133 stations one year on 7033!

We just gotta get more band . One suggestion was for South and Central America DX to work just above 7100 has not caught on yet.

>Even most 10-10ers have given it up.

I have worked 16 new countries on 12 the past month. Some of the Dx
pile ups cover 5 or 10 khz. I agree that just plain rag chews are
still scarce..but they will come.

As for 10, its true there are not many Q's above 28.5 but the CQ ww
SSB had stations up to 28.750 and in 1988 it was wall to wall from
28.3 to well over 29 mhz.

USA AM is quite active on 29 and 29.1 I hear SSB nets on 28.6

Also remember that there are probably only about 130,000 USA hams that
can operate 10 and millions of CBers and unlicensed types.

Just wait for sunspots over 100 and the 10 meter contest or a Dx
contest to load 10...

If HF were obsolete, us technically-motivate folks wouldn't care enough
to try to get the (truly) obsolete Morse requirement for access to HF
dropped before ham radio implodes out of sheer backwardness.

> The reason for Morse code requirement was a dumbing down of the original
> requirement which was a practicum of building hardware. I think the
> Morse requirement should be replaced with the more applicable practicum.

The comment that comes out occasionally that we would be far better served
by a test in digital logic and microcontroller or DSP programming is QUITE
accurate and seems to go along with your suggestion.

Mike ... it has become abundantly clear that, for you, the question
pools issue is just an excuse. The pools have been, and are going
to continue to be, enlarged to the point where rote memorization of
the technical parts will be virtually impossible, yet you still bitch
and moan about it as an excuse to insist on maintaining the Morse text.

Why don't you just admit you want the Morse test for some real reason,
like "I had to do it ..." or "It keeps the bands from being overcrowded"
or "I like Morse and I'm afraid there will be nobody to beep with in a
few years if we don't force everyone to learn Morse." (all of which are,
of course, bogus reasons for maintaining the test, but at least one of
them, or something similar, would be more honest)

Vincent Biancomano <103520.355@CompuServe.COM> wrote in article
<OpOHjDA58GA.302@nih2naab.prod2.compuserve.com>...
> The issue of Morse never had anything to do with its usefulness
> as a mode, or old technology. What the issue involves is easing
> of requirements (as stated by former ARRL President Vic Clark
> in 1982), and more recently, the issue of manufacturers
> unhappy about sales of their HF lines of ham equipment. That's
> what the general issue has been, is, and always will be about.

Vince ... your argument is absurd (as are ALL of your arguments),
but one thing makes me curious, since you regurgitate it at least
once a week, it seems ...

Explain this for me (if you can, which I doubt) ... I couldn't give
the proverbial rat's ass if Yeasicwood ever sold another single
radio ... I don't give a damn if they all go out of business tomorrow.
(I'm sure that several new companies would appear to fill the hole,
and we might actually get some innovation and decent costs for a change.)

Yet, you imply that "the issue of manufacturers unhappy about sales
of their HF lines of ham equipment" is "what the general (no-code)
issue is all about."

How can this be? Yeasicwood NEVER came to me and asked me to support
no-code HF ... I support it because I know that it is the only way to
gain necessary growth, revitalize ham radio, and bring in many technical
folks who have (still) stayed away in droves because they refuse to be
"second-class citizens" to a bunch of rednecks who are (generally) far
less technically knowledgeable and competent than they are.

I doubt that Yeasicwood went to Gary, Todd, Len, Mark, Bill, Cecil
or any of the other proponents of eliminating the Morse test as a
"requirement" for HF access asking them to "help them out" either.

In fact, I've NEVER, EVER seen a single press release, position paper,
advertisement, or any shred of evidence to support your "claim" that
"that's what it's all about." As usual, you state something as if it
were fact, with no credible evidence, and demand that everybody "wake up,
be reasonable, and see it Vince's way." Horse manure ...

> So learn your history, Hans, because without it, your argument is
> without portfolio.

While I frequently disagree with Hans on issues (and hesitate to come
to his defense because I think he is FAR to ARRL "party line" for my
tastes) I am sick of your "learn your history" crap. Many of us have
been licensed and followed regulatory matters and ARRL politics for many

years. Many of us are even capable of thinking independently and feel no need to cite "quotations" from dead ARRL presidents out of context to support our positions.

Your pompous attitude shows that you are nothing more than an arrogant, egotistical ignoramus whose major purpose in posting her is to troll for responses and try to find suckers who will believe that you actually have a clue ...

No complaints, but if the band was wide open for 40cw, why would it
make any difference to anyone if they called

QSX 7.050
or
QSX 7.040
or
QSX 7.030
or
QSX 7.020?

It just would have been nice to see the phone ops a little higher up in the band. And U.S. ops, knowledgable of the band plans in the U.S., didn't have to be there ASKING the DX to make it worse.

That was my point. Same as for digital signals right on 7.040, which is the 40m QRP calling frequency.

Just because something is legal doesn't make it particularly considerate, that's all.

P.S. During SS Phone, I'll be all over the phone bands. If someone calls a net on 75, I'll probably accede and move because that's what I'd want done for me.

WB2EZG said:

> When you decide which side of the Morse debate you're on,
> Hans, let me know.

I haven't decided yet, Vince, but I'll let you know when I
have. I can give you this info in advance of my decision.
It will be neither of the two extreme sides I see represented
around here on r.r.a.*. A pox on both those houses.

> So learn your history, Hans, because without it, your argument is
> without portfolio.

My "Asteroids & Dinosaurs" peice was not an argument, but simply
a metaphor calculated to stimulate some thoughtful discussion.
Not nearly as profound as your incessant requotes of W4KFC, I admit,
but perhaps less polarizing.

Therefor, since I have advanced no argument, your admonishment is simply
noted without need for comment, but I'll keep it in mind.

Regards,
Hans, K0HB

~~~
Anyone who conducts an argument by appealing to authority is not
using his intelligence; he is just using his memory.
--Leonardo da Vinci
~~~
We pass the word around; we ponder how the case is put by different
people, we read the poetry; we meditate over the literature; we play
the music; we change our minds; we reach an understanding. Society
evolves this way, not by shouting each other down, but by the unique
capacity of unique, individual human beings to comprehend each other.

Hello Jean-Phillipe and anyone else who wants such a program.

I have now completed a program in the "C" programming language. It's only about 30k in size and can be sent as an attachment via e-mail. Of course, it cannot be posted as a newsgroup article.

The program runs in DOS or Windows, has a Text Interface (no graphics) and is very simple. The home QTH is stored in ASCII text files so you never have to enter your own Lat/Long after you have once established it in the file. When you want to find out the True Bearing and Distance to any Lat/Long on the globe, you simply run the program, enter the Lat/Long of the distant point, and the answer is immediately displayed.

Anyone wishing a copy of this program can send me an e-mail requesting it, and I will respond by return e-mail with an attachment. The program is free - gratis and can be shared with whomever you wish.

Bob

PUBLIC NOTICE
Federal Communications Commission
1919 M St., N.W.
Washington, D.C. 20554

Released: October 30, 1997

AMATEUR STATION VANITY CALL SIGN SYSTEM FILING GATE 4 OPENS DECEMBER 2, 1997

General, Technician Plus, Technician and Novice Class amateur operators may request a vanity call sign on or after December 2, 1997. If your application is received prior to this date or if you do not qualify under the standards detailed below, your application will be dismissed. Amateur Extra and Advanced Class operators continue to be eligible to file for a vanity call sign under filing gates previously opened. File your request on either, but not both, the interactive electronically-filed Forms 610-V and 159 or the document Forms 610-V and 159. Both versions are available from the Internet site <http://www.fcc.gov/wtb/amateur>. To facilitate the processing of requests for vanity call signs each workday, electronically-filed Forms 610-V for which the filing fee and Form 159 have been received will be processed first followed by document Forms 610-V and 159. The fee is $50. Pay by check (to "FCC"), bank draft, money order or credit card. Do not send cash.

USING THE INTERACTIVE ELECTRONICALLY-FILED FORMS 610-V AND 159 - To access instructions, click your mouse button with the pointer on the highlighted portion of the item for which you need assistance. Press your <enter> key to submit your application. If you have provided the required information, the screen will prompt you with a Fee Remittance Advice, FCC Form 159, that you must complete, print and mail together with the fee to Federal Communications Commission, POB 358994, Pittsburgh, PA 15251-5994 . The Form 159 and the fee must be received within ten (10) days of electronically filing your Form 610-V or your application will be dismissed.

USING THE DOCUMENT FORMS 610-V AND 159 - The document Forms 610-V and 159 are also available from the Fax-on-demand system by calling (202) 418-0177 from the handset of a facsimile machine, or from the FCC's forms contractor by calling (800) 418-FORM (3676). Your application package (completed document Form 610-V with a copy of your license attached, Form 159 and the proper fee in a sealed envelope) must show this mailing address: Federal Communications Commission, Amateur Vanity Call Sign Request, POB 358924, Pittsburgh, PA 15251-5924. If your application package is delivered by hand or courier, it must be prepared

as described and sealed in a second, outer envelope showing this courier address: Federal Communications Commission, c/o Mellon Bank, 525 William Penn Way, 27th Floor, Room 153-2713, Pittsburgh, PA 15259, Attn: Wholesale Lockbox Shift Supervisor. [Note: Do not use the courier address as a mailing address and vice-versa.]
You must hold an unexpired amateur operator/primary station license grant of the proper operator class, as described below, to request a vanity call sign for your primary station. To request a vanity call sign for a club station, you must also hold an unexpired club station license grant listing you as the license trustee. Your name and mailing address as shown on your current license grant must be correct. If your license grant has expired, or if your name or address has changed, you must first request modification of your license grant to show the correct information by filing FCC Form 610 or, in the case of a club station, FCC Form 610-B. Refer to the licensee data base to verify that the call sign you are requesting is not already assigned. The license grant of the former holder now deceased must be eleted from the licensee database. This is accomplished by submitting a signed request for license grant cancellation accompanied by a copy of an obituary or death certificate to the FCC, 1270 Fairfield Road, Gettysburg, PA 17325-7245 prior to filing the application for a vanity call sign. The autogrant system does not include review of any document, except a copy of your license, attached to Forms 159 and 610-V. Even where a call sign does not appear on the database, it may not be available for assignment. For additional information on the assignment status of call signs, contact the FCC's copy contractor, International Transcription Services [717-337-1433]. A call sign is normally assignable two years following license expiration, surrender, revocation, set aside, cancellation, void ab initio, or death of the grantee. See Fact Sheet PR5000 Number 206-V AMATEUR STATION VANITY CALL SIGN SYSTEM. Where a vanity call sign for which the most recent recipient was ineligible is surrendered, cancelled, revoked or voided, the two year requirement does not apply. For explanations of Groups A, B, C and D and the geographic Regions, see Fact Sheet PR5000 Number 206-S, AMATEUR STATION SEQUENTIAL CALL SIGN SYSTEM.

REQUEST BY LIST (PRIMARY OR CLUB STATION) - Provide a list of up to 25 call signs in the order of your preference. The first assignable call sign on your list will be assigned to your station.
When so requesting for your primary or club station:
The call sign must have been unassigned for at least two years.
If you are an Amateur Extra Class operator, each call sign must be in Group A, B, C or D.
If you are an Advanced Class operator, each call sign must be in Group B, C or D.
If you are a General, Technician Plus, or Technician Class operator, each call sign must be in Group C or D.
If you are a Novice Class operator, each call sign must be in Group D.
Each call sign must be one designated for the Region of your mailing address as follows (refer to Fact Sheets PR5000 Numbers 206-S and 206-V

for additional mailing address requirements):
o One of the contiguous 48 states - Regions 1 to 10.
o Alaska - Regions 1 to 11.
o American Samoa - Regions 1 to 10, or Region 13 having numeral 8.
o Commonwealth of Northern Marianna Islands - Regions 1 to 10, or Region 13 having numeral 0.
o Guam - Regions 1 to 10, or Region 13 having numeral 2.
o Hawaii - Regions 1 to 10, or Region 13 having numeral 6 or 7.
o Puerto Rico - Regions 1 to 10, or Region 12 having numeral 3 or 4.
o Virgin Islands - Regions 1 to 10, or Region 12 having numeral 2.

REQUEST BY FORMER HOLDER (PRIMARY STATION) - For your primary station, you may request a call sign that was previously assigned to your primary, secondary, repeater, auxiliary link, control or space station. When so requesting for your primary station: You may request your former call sign even though it has been unassigned for less than two years. The two year requirement does not apply to an otherwise eligible primary station if the call sign was previously assigned to a station of the requestor. You do not have to hold a class of operator license required for the Group (A, B, C or D) for the call sign requested. A call sign request by a former holder may be from any Group in the sequential system. Your mailing address does not have to be in the Region designated in the sequential system for the call sign requested. A call sign requested by former a holder may be in any Region.

REQUEST BY CLOSE RELATIVE OF FORMER HOLDER NOW DECEASED (PRIMARY STATION) - For your primary station, you may request a call sign that was previously assigned to the primary, secondary, repeater, auxiliary link, control or space station of your now-deceased spouse, child, grandchild, stepchild, parent, grandparent, stepparent, brother, sister, stepbrother, stepsister, aunt, uncle, niece, nephew, or in-law. When so requesting for your primary station: You may request the former call sign of a close relative now deceased even though it has been unassigned for less than two years. Upon the death of the holder, a call sign is assignable immediately to an otherwise eligible primary station of a close relative. You must be an Amateur Extra Class operator to request a Group A call sign. You must be an Amateur Extra or Advanced Class operator to request a Group B call sign. You must be an Amateur Extra, Advanced, General, Technician Plus, or Technician Class operator to request a Group C call sign. You must be an Amateur Extra, Advanced, General, Technician Plus, Technician or Novice class operator to request a Group D call sign. Your mailing address does not have to be in the Region designated in the sequential system for the call sign requested. A call sign requested by a close relative of former holder now deceased may be in any Region. You must show your relationship to the deceased person exactly as listed in the instruction, i.e., "child," "niece" or "in-law".

REQUEST BY FORMER HOLDER (CLUB STATION) - For the club station for which you are the license trustee, you may request a call sign that was previously assigned to that station. When so requesting for a club

station: You may request your club station's former call sign even though it has been unassigned for less than two years. The two year requirement does not apply to an otherwise eligible club station if the call sign was previously assigned to the club station for which the requestor is the license trustee. You do not have to hold a class of operator license required for the Group (A, B, C or D) for the call sign requested. A call sign request by former holder may be from any Group in the sequential system. Your mailing address does not have to be in the Region designated in the sequential system for the call sign requested. A call sign requested by a former holder may be in any Region.

REQUEST IN MEMORIAM (CLUB STATION) - If you are the license trustee for your club station, you may request in memoriam for your club station the call sign previously shown on the primary, secondary, repeater, auxiliary link, control or space station license of a deceased person who was a member of the club. When so requesting in memoriam for your club station:
You may request the call sign even though it has been less than two years following death of the club member. Upon the death of the holder, the call sign is assignable immediately to an otherwise eligible club station. You must have in your station records a written statement (do not send to FCC unless requested)from a spouse, child, grandchild, stepchild, parent, grandparent, stepparent, brother, sister, stepbrother, stepsister, aunt, uncle, niece, nephew, or in-law of the deceased confirming the deceased person's association with the club and showing consent of the relative to your request. You must be an Amateur Extra Class operator to request a Group A call sign. You must be an Amateur Extra or Advanced Class operator to request a Group B call sign. You must be an Amateur Extra, Advanced, General, Technician Plus, or Technician Class operator to request a Group C or D call sign.
Your mailing address does not have to be in the Region designated in the sequential system for the call sign requested. A call sign requested in memoriam may be in any Region. You must enter the relationship to the deceased person giving consent exactly as listed in the instruction, i.e., child, niece or in-law. Access the FCC's web site at <http://www.fcc.gov/wtb/amateur> for the electronically-filed Forms 610-V and 159, Fact Sheet PR5000 Number 206-V AMATEUR STATION VANITY CALL SIGN SYSTEM, Fact Sheet PR5000 Number 206-S AMATEUR STATION SEQUENTIAL CALL SIGN SYSTEM and answers to frequently asked questions about the vanity call sign system. For general information, contact the FCC's National Call Center at 1-888-225-5322 (CALLFCC).

Go to http://www.qrz.com There are many MODS, for the HR-2600. All
it takes is a couple resistors and you get 25 - 30 MHZ coverage.

Let me see...hmmm?

Now we have GPS... and much better navigators?

Now we have diesel engines... and much better sailors?

Now we have synthesizers... and much better composers and musicians?

Now we have word processors... and much better writers?

Now we have calculators... and much better math students?

Now we have television... and much better... ???? (readers?)
Don't make me LEARN to read. I'll just cut and paste that archaic text into my Monlogue voice synthesizer, and it will talk to me.

The list goes on...

There is much to be learned here. Every time society takes a step to make something easier for the masses the volume of people taking advantage of the new technology more than quadruples, (it's great for the economy you know) while the quality of the "craft" sinks lower and lower...

Personally I got my "General Class" ham license when I was 12 years old... It took me three tries. So all you electronic geniuses out there that are whining about having to learn it should be embarrassed... Seriously embarrassed. It's really not difficult at all. You're not complaining about someting a 12 year old child can do are you? Have any of you ever spent more than a few minutes trying to get the "hang" of it (cw) ? I doubt it.
Sure it's an out moded form of communications. That's not the point. The point is it's nice to put a student pilot in a Cessna 150 before you let him jump into an F-16. The student just might learn something... Though judging by all these posts it seems most would say no... get me straight to the F-16. (Since the Cessna is out moded by all your analyses.)

When I look at the VERY long list of people posting their bellyaches about having to learn such an archaic mode it just confirms to me what society is all about today: "Entitlements"... gimme gimme gimme. I want mine and I want it NOW! Don't make me run the gauntlet, no trial by fire, no tradition, no committment. Gimme it NOW!

Now I think I'll get my mind back on sailing... You all know, "that archaic form of transportation" using the wind. The mode you have to LEARN how to do. Heck, it's taken me a lot longer to learn to sail than to learn the Morse code. I guess I should have whined about that years ago.

Hi,

After some 10 years in packet radio, I've decided to go to a "lower profile" and sell off most of my packet ports. All radios are in great shape, as they'veonly been used on packet (very low duty cycle). Some have never had a mic pluggedinto them. All prices are firm, and do not include shipping. I stand behind allthis gear 100%. I'm an Extra class licensee, and a professional Electronics technician. I'm also an ARRL/FCC V.E. Examiner; radio amateur for 20yrs. I tell you this, so that you will have an idea as to how these items were cared for during their time with me. (non smoker) Here's the list:

Alinco DR-110T 2mtr transc. (cellular receive capable ...not modified) $150 Yaesu FT-212RH 2mtr transc. (tone encode/decode .. very user friendly) $175 Icom IC-281H 2mtr transc. (440 rcv. .. 9600 baud capable) $175 Icom IC-38A 220 mhz Xcvr. (used exclusively on packet) $225 Kenwd TM-733A 2mt/440 dual band (9600 baud, used on packet only) $300

Kantronics RFC 3-312 220 amp/pre-amp (30in - 120 out ... up to 150w) $225 Cushcraft 220 (1 1/4mtr) BOOMER (15ele - 15.5db gain) $ 75

Kantronics KPC-3 512K! (I personally did the 512K mod!) $120 Kantronics KPC-9612 (dual port 9600/1200 tnc ... 128K) $200

I have the manuals and in most cases, the original boxes, etc.

Bank certified check or Postal M.O. acceptable tender. Estimate shipping costs at $4 to $7 for continental U.S. via UPS Ground.

If you are interested in any of the above, contact me at:
mailto:cooncat@ncweb.com

Fax: 440-428-2399
Work Phone: 440-255-1080 x883 (8am-4:30pm EST)

>don't have that anymore because the FCC has *quit doing their job*.
>Piling on irrelevant tests won't alter that. The only way to alter that is
>to generate political pressure to get the FCC to start *doing their job*
>again.

I completely agree. However, it is the Congress who doesn't want the FCC
to do this *job*. I think the FCC would be more than happy to enfore
their rules if their bosses would only let them. The mandate from
Congress pretty much tells them to get out of the business of enforcement.
They have been told to quit spending money, and start producing revenue.

Those who fear the apocolypse of CB visiting itself upon the ham bands
would do better to concern themselves more with lobbying congress for
better enforcement, and less with maintaining code testing requirements.
Indeed, we should all grind our congressmen for more FCC inforcement.

We need to make them aware that local enforcement is not the answer.
Police and code enforcement officers will never have the tools and
expertise necessary for effective enforcement. By removing the FCC from
this task, we permanently dismantle our best resource; we relegate our
expertise and our mechanism for effective enforcement to a bygone era -
much as we have done in the space program with our heavy launch capability.

It appears that Congress feels this is a done deal. Once embarked upon,
there isn't a return course, and so it may be left to us to keep our own
noses clean. In this respect, the ARRL's proposal to the FCC to enhance
and empower the OO program (or something like it) seems our best bet. We
can take a more positive approach in arguing for such a program too.
Rather than whining to our representatives about how "bad" the ham bands
are becoming without enforcement, we can offer to provide for our own
enforcement - utilizing our own expertise free of charge - in service to
our country, of course.

Either way, it is Congress as well as the FCC who hold the reins, and call
the shots which will determine the future of the ARS. If we're going to
hang in there for the long term, we will have to pick up the slack, and it
cannot be done simply with testing. 5 WPM is enough to continue the
tradition of Morse code in the amateur service. That, and the continued

effort to improve our written exams, and continued enforcement will ensure we have a thriving avocation to enjoy for perhaps another 70 years.

How about replacing morse code with a requirement for a new ham to be
able to count to 100 in hexidecimal, binary and octal. At least that
might come in handy some time in the future.

OK, silly idea... but I think the point the no-coders are making here
is that learning morse code is essentially a useless skill (face it,
there's not much use for it anymore). If you want something to weed
people out, at least find something that is going to be useful in the
future! Hell, make 'em pass a test in quantum physics or rocket
science or something. Anything. Just make sure it's something
useful!

I am interested in buying or building a small downconverter for ATV use.
I need the downconverter from 440Mhz to TV broadcast. Anybody know what
the smallest downconverter available might be?

It needs to have battery power and must be hand held. Any info?

Thanks,
Darvell (N7LN)

> One example: exceeding the CWID rate as set in Part 97.
>Another: controlling a 2 meter repeater via 2 meters.

Actually with the exception of ham repeaters and stations in auxiliary operation, a ham can send the requisite ID at 2000 wpm or 2 wpm in cw on any frequency, it's only automatic CW identifications that have to be sent at less than 20 words per minute. If for example the control op somehow triggers the ID, manually, any speed suffices.

You also have to be careful defining what you mean as controlling a repeater. Shutting the repeater on and off on 2 meters is probably a violation, while changing let's say the tone access frequency may not be. One has to be a control operator to change things. Also many repeaters with auxiliary frequncies retransmit signals unless muted, are you sure that the actions you think you hear over the repeater are actually being done on 2 meters, and not on let's say 440 MHz where such acts would be authorized?

You're not kidding. Pilots do *not* learn Morse code to ID beacons.
The beacon ID is printed in graphical dots and dashes on the chart,
and the pilot just reads that and compares the pattern to what he hears.

Now, it so happens that the particular pattern of beeps transmitted
by beacons (and VORs, etc) is in fact Morse code. But pilots mostly
don't know that, don't need to know that, and don't care.

I have s7 - s9 white noise on 20 almost all the time. I suppose that it is generated somewhere VERY locally. So I want to try to use noise canceling device. Does anybody have any experience with one of these?

As soon as my shack is full of computer noise, I will need a noise pickup antenna outdoors. I know that only MFJ has an external secondary antenna connector. But I am really concerned about poor MFJ quality.

Any experience appreciated.

Be warned - the radio's tx audio is a little weak. There is a known
problem with the mic placement as well as some of the audio circuits.
The new units shipping have apparently been fixed, but I would strongly
recommend getting on a repeater and asking for an audio quality report
before purchasing. It is a good radio if the audio has been fixed.

>me, but my experience is not that vast when it comes to aviation.

Pilots don't have to learn Morse and are not tested for it. The
Morse ID on the navaids (that are being phased out by the way)
is printed on all charts and is sent at sufficiently slow rate
to count the dits and dahs.

Re: 5WPM ITU requirement you reference in a previous post

The ITU only mandates Morse "knowledge", it does not specify a
minimum speed or type of test. 1WPM or a written letter-to-
code quiz would also suffice to meet treaty requirements if it
was chosen to be done that way. This is why blinking lights
for the deaf and code waivers for General-to-Extra are all
"internal" US rules as far as the ITU is concerned.

P.S. alt.radio.scanner, rec.radio.scanner, rec.boats.electronics,
and rec.video.satellite.tvro

were removed from the posting distribution. Why you guys think
the above are appropriate for this discussion is beyond me.

I hate admit it. You are 100% correct. Without some kind of
discriminator from the general public, the hams might as well call their
neighbor and say...wanta use the ham bands....just ask the FCC.

This not only applies to HF but VHF (as you have stated). I plan to
work mostly QRP CW. However, I want a 2 meter HT for emergency
communication because I don't have to pay for it when I am not using it
as it the case for cell phones. I've talked to other hams of similar
ilk. BYe-bye 2m!

Time to go back to school then, William. You might want to investigate
the gain that even 2-ary FSK provides over OOK Morse. When you start
getting into modes like Clover, you can still provide meaningful throughput
at S/N levels that a human CW op would skip over because they can't even
hear the signal. _Wireless Digital Communications_ by Tom McDermott, N5EG
is a fine introduction to the subject.

>--Former ARRL President Vic Clark, 1982
>
>Of course, Clark wasn't saying that Morse isn't useful. What he
>WAS saying is that the actual issue has to do with deregulation.

Vince likes to post this snippet, but he likes to avoid the context
in which it was stated. The context is that Clark had been told
by a FCC official that the FCC would no longer feel compelled
to actively work to retain amateur allocations if amateurs continued
to insist on a Morse speed testing ladder. (This was in conjunction
with the FCC's 1981 initiative to flatten the Morse testing ladder,
something the ARRL opposed vehemently.)

Clark indicates in the quote that he'd rather see amateur radio
die than to reform amateur regulation and licensing. This is a
clear statement that he put his prejudices about the existing
regulatory environment ahead of the survival of the amateur
service.

Deregulation is indeed a durable matter because deregulation
has been a popular and successful effort to reduce the weight
of excessive and irrational government regulation. This has
provided large benefits to the public. It has allowed Adam
Smith's invisible hand to remove inefficiencies in the market
fostered by government induced distortions. The public has
seen the effect in terms of lower prices for goods and services
in areas where government regulation had formerly stifled
competition, and a net increase in goods and services in
areas where government regulation had stifled innovation.

Deregulation has also had popular appeal because it places
government back in the role of servant instead of master,
and that resonates with the American conception of the role

of government. This dates back to Jefferson's famous statement during his farewell address that the sole legitimate function of government regulation was to prevent one man from harming another, and that in all other things government should allow men to freely pursue their own affairs and goals in their own fashion.

Thus any and every government regulation has to be balanced so that the benefit of prevention of harm outweighs the cost of restricting freedom of action. That's the real issue with regard to Morse speed testing. Does it provably reduce harm to others more than it restricts freedom?

Clearly, I am of the opinion that it does not. No harm is caused to others by sending Morse slowly, or not at all. OTOH, clearly, the operation of malfunctioning equipment, and the radiating of spurious signals, can cause measurable harm to others. Thus testing of radio technical knowledge rests on a sound foundation of legitimate government concern. The two issues are not linked.

Indeed? Do you have to pass a proficiency test demonstrating speed
at reefing sails to get a master's certificate for a power vessel?

>You need a better antenna. All the good DX is on CW. All of it.

Whether that is true or not, and the DXCC Honor Role would tend to indicate that *some* of the "good DX" is using other methods than Morse, has nothing to do with whether Morse speed testing is a relevant criteria for amateur licensing. Dxing is only one small facet of amateur radio in any event.

The issue isn't about banning use of Morse. The issue is about Morse speed testing for amateur licensing. If you want to work that "good Dx" which is using CW, well then you'll just have to learn CW won't you? No one is trying to stop you from doing that. And if that "good" Dx is using RTTY, you're going to have to learn to do that, aren't you? And if that "good Dx" is using SSTV, you're going to have to learn how to do that too, aren't you? If Dxing is your interest, pursue it however you think best. No one is telling you otherwise. People are only asking that you return the courtsey.

Where you cross the line is when you wish to invoke the power of goverment to force techniques of interest to you on others. At that point you have to prove that the requirement has a demonstrated benefit in reduction of harm to others which outweighs the imposition on the freedom of action of others. I would suggest that you cannot make that case today for Morse speed testing.

Nope, change that to "than would be possible with SSB or FM". Otherwise,
they would use Morse code for space probes. Would you believe that a
one watt coherent digital signal will beat a 90 watt CW signal using
the same bandwidth? The digital mode gets through when no human being
can even hear the digital mode carrier wave. Perhaps that's why you
missed it. :-)

This is a petulant, emotional reaction, and an insult to tens of thousands of licensed hams like myself. What the hell is the reasoning here? That learning CW automatically makes one a superior operator, and that the lack of Morse capability automatically throws one into the realm of CB hacks? Jesus, I'm still waiting to hear one sound, reasoned, valid, practical, intelligent reasons for the Morse requirement. Anyone?

From Tad Cook, K7VVV
Seattle, WA October 31, 1997
To all radio amateurs

SB PROP ARL ARLP044
ARLP044 Propagation de K7VVV

Disturbed conditions forecast for last weekend hit quite hard. A coronal mass ejection a few days earlier caused the planetary A index to hit 25 last Friday, 19 on Saturday and 14 on Sunday. This caused HF havoc during the CQ Worldwide DX Contest.

Last week we saw the average solar flux drop a few points, and the average sunspot number decline by 10. At the same time the average flux for the previous 90 days went up by one point from 86 to 87, and the solar flux was below this average for six out of the seven days.

This weekend is the ARRL CW Sweepstakes, and conditions for this domestic contest should be quite a bit better. Conditions are expected to be quiet to unsettled, with solar flux climbing from 90 to 95.

Northwest Research Associates has an interesting web site devoted to space weather, including charts of 10.7 cm solar flux, effective sunspot numbers and geomagnetic indices. Check it out at http://www.nwra.com/nwra/spawx/

Sunspot Numbers for October 23 through 29 were 0, 11, 13, 14, 44, 50 and 41 with a mean of 24.7. 10.7 cm flux was 79.7, 78.6, 81.4, 82, 84.4, 85.5 and 87.2, with a mean of 82.7, and estimated planetary A indices were 6, 25, 19, 14, 15, 13, and 10, with a mean of 14.6.

Here are some projections for domestic paths for this contest weekend:

From California to the Northeast United States check 80 meters 2330-1230z, 40 meters 2130-0300z and 0630-1500z, 20 meters 1500-2200z, and possibly 15 meters around 1800-1900z.

From Southeast United States to California check 80 meters 0000-1300z, 40 meters around the clock, with the strongest signals from 0130-0300z and 0630-1130z, and 20 meters 1530-2200z.

From Ohio to Texas, check 80 meters 2130-1400z, 40 meters around the clock with the least stable conditions around 0500-0600z and the strongest signals from 0000-0200z and 0700-1130z. Check 20 meters 1500-2130z.

From Seattle to the central U.S., check 80 meters 2300-1500z, 40 meters around the clock, with strongest signals 0100-0500z and 0800-1300z, and 20 meters 1530-2330z. 15 meters may open 1800-2130z, and 10 meters might open 1900-2030z.

From central U.S. to Hawaii, check 80 meters 0330-1400z, 40 meters 0200-1500z, 20 meters around 1600z and 1700-0000z and 0130-0230z. 15 meters looks very good 1730-2330z.

TAUZIN SAYS "WE HEAR YOU" TO AMATEURS, SCANNER FANS

Hams, scanner enthusiasts and others are breathing a tentative sigh of relief this week. Their efforts apparently have paid off to convince House Telecommunications Subcommittee Chairman W. J. "Billy" Tauzin (R-La) that HR 2369, the Wireless Privacy Enhancement Act of 1997, was flawed legislation. Tauzin's so-called "scanner bill" has been rewritten to reflect the concerns of hams, volunteer firefighters, scanner enthusiasts and others.

Many meetings, phone calls and letters with Tauzin's staff followed the introduction of the original bill. At Tauzin's request, the League submitted recommendations to narrow its scope. From Washington, ARRL Legislative and Public Affairs Manager Steve Mansfield, N1MZA, reports that most of those recommendations found their way into a committee markup of the bill,

released Wednesday, October 29. While the original version of HR 2369 covered the entire Commercial Mobile Radio Service (CMRS), the current version restricts its scope to just cellular telephone and the Personal Communications Service (PCS). Mansfield tempered his optimism with caution. "It is still too early to say whether the bill in its modified form, or in any other form, will ever become law," he said.

In introducing the substitute bill, Tauzin praised hams for their constructive cooperation. "The bill was never intended to prohibit the scanning of public safety frequencies or other noncommercial frequencies in which users have no expectation of privacy," he said. It was designed solely "to protect users of wireless services that pay for such services." Mansfield said the League worked with a coalition of other organizations to make sure members' voices were heard on The Hill. Changes also were recommended by scanner interests including Uniden and Tandy.

Unless Congress cuts corners, the bill still has a long way to go. It must be passed by the full Commerce Committee before it goes to the floor of the House. "The ARRL will continue to work with committee staff to fine tune one of the bill's provisions that could have unintended consequences with regard to unrelated modification of equipment," Mansfield said.

In its original form, the bill had generated a good deal of controversy that boiled over into emotional letters and e-mail messages to Members of Congress. Some critics interpreted the bill as outlawing equipment that receives law enforcement, fire, EMS and other nonbroadcast services, and felt it could even prohibit listening to these transmissions. The ARRL believed it could also impede the ability of manufacturers to include expanded VHF and UHF receiving capability, something most hand-held and mobile transceivers now offer.

While the League did not object to the original bill's efforts to curb cellular and PCS eavesdropping--something that's already illegal--its primary objection was that it could adversely affect the efforts of ham radio emergency volunteers, volunteer fire departments and other agencies that monitor public service frequencies using scanners. Among other things, the League pointed out to House members this month that the Electronic Communications Privacy Act (ECPA) of 1986, makes it illegal to intercept cellular, PCS, and other telephone-type communication.

One provision of the latest version calls on the FCC to consider defining the expression "capable of readily being altered" to require scanning receivers to be made in a way that effectively precludes alteration as necessary to prevent illegal use. Another calls on the FCC to consider requiring warning labels for scanning receivers that alert users to the prohibitions in federal law.

Mansfield praised Tauzin and his staff for paying attention to Amateur Radio concerns on the proposed legislation. "On the whole, it looks like Congress has listened," he said.

WRC-97: ARTICLE S25 CONSIDERATION PROBABLY DEFERRED UNTIL 2001

Late word from the ITU's 1997 World Radiocommunication Conference in Geneva is that Article S25 of the international radio regulations might not end up on the agenda for the WRC-99 after all. Article S25 was placed on the tentative agenda for WRC-99 at WRC-95, two years ago. A working group of WRC-97 delegates compiling the agenda for WRC-99 decided on Friday, October 31, to recommend that the matter be held over until 2001 because of a long list of other items vying for inclusion on the WRC-99 agenda. The decisions as to what will and will not be included on the WRC-99 agenda will not be final until agreement is reached in the Plenary, much later on in the four-week conference. Article S25 contains the international radio regulations that are specific to the Amateur and Amateur-Satellite Services, including the Morse code requirement for operation below 30 MHz.

The possible realignment of the 40-meter allocation, to resolve the conflict between amateurs and broadcasters in part of the band, tentatively has a place on the WRC-99 agenda. This issue likely will be tied to the desire of HF broadcasting for more spectrum between 4 and 10 MHz. Both issues will be on the WRC-99 agenda unless more urgent items crowd them off before the close of WRC-97.

Ham radio is well represented at WRC-97, which began Monday, October 27. ARRL Technical Relations Manager Paul Rinaldo, W4RI, is a member of the US delegation. Jim Dean, VE3IQ, of the Radio Amateurs of Canada, David Wardlaw, VK3ADW, of the Wireless Institute of Australia, Keigo Komuro, JA1KAB, of the Japan Amateur Radio League, and Y. S. Park, HL1IFM, and J. G. Rhee, HL1AQQ, of the Korean Amateur Radio League, are on their nations' delegations. Each of these delegates has a strong IARU connection. IARU representatives include Larry Price, W4RA, Wojciech Nietyksza, SP5FM, and Michael Owen, VK3KI.

Among many other topics, the so-called "Little LEO" issue will come before the 1800 or so WRC-97 delegates. Current US proposals do not include any plans to share amateur frequencies, but this does not prevent other delegations from bringing up plans that might adversely affect ham radio allocations. That hasn't happened so far. In another action Friday, the working group that's considering Little LEO allocations agreed to a New Zealand proposal to designate 146 to 148 MHz as "no change," and Rinaldo is optimistic that designation will hold.

Little LEO advocates continue their attempts to justify additional allocations, but a recent FCC order to confirm an agreement to share existing Little LEO allocations warned the industry not to expect additional spectrum in the future. "We had significant difficulty obtaining spectrum for Little LEO service at WRC-95," the FCC said.

Rinaldo has been named chairman of a drafting group that's looking into the issue of wind profiler radars. These systems operate around 50, 449 and 1000 MHz and have some potential for interference to Amateur Radio. No surprise new bands for wind profilers were proposed at today's first meeting, and a European proposal for 420 to 435 and 438 to 440 MHz was taken off the table.

WRC-97 delegates also are being asked to consider adding the Earth Exploration Satellite service to the 430 to 440 MHz band and to upgrade the

status of EES in the 1240 to 1300 MHz band.

World Radiocommunication Conferences are held every two years. WRC-97 is scheduled to wrap up on November 21

FCC OPENS VANITY GATE 4!

Christmas will arrive a bit early for General, Technician Plus, Technician and Novice Class hams. The FCC has announced that vanity call sign program Gate 4--the last vanity gate--will open December 2, 1997, for General, Tech Plus, Technician and Novice class hams to request a vanity call sign on or after that date. The potential number of applicants from these four licensee groups is huge--well over a half million hams!

Applicants may use either the electronic Forms 610V and 159 on the Web or hard-copy Form 610V and 159--but not both. Both versions--plus fact sheets and answers to frequently asked questions--are available at http://www.fcc.gov/wtb/amateur. The application fee is $50, payable by check (to "FCC"), bank draft, money order or credit card. Do not send cash. The FCC gives processing priority to electronically filed Forms 610V for which the filing fee and Form 159 have been received. The FCC now requires all vanity filers to include a Form 159, which must be mailed to the FCC with your fee.

It's up to applicants to make sure that their applications do not arrive before December 2, 1997. The FCC will return all applications that arrive early. All other vanity call sign gates will remain open, and Amateur Extra and Advanced class operators continue to be eligible to file for vanity call signs under those filing gates.

Any call sign requested must be appropriate for the class of license you hold. This means that Technician, Tech Plus, and General class licensees may ask for a Group C (1(3) or D (2(3) call sign. Novice class licensees may only request Group D call signs.

Electronic filers must mail the Form 159 Fee Remittance Advice to FCC, Amateur Vanity, PO Box 358994, Pittsburgh, PA 15251-5994. The Form 159 and the fee must be received within 10 days of electronically filing your Form 610V or your application will be dismissed.

Those filing on document Forms 610V and 159 must mail the application package containing a completed Form 610V with a copy of your license attached, Form 159 and the proper fee in a sealed envelope to FCC, Amateur Vanity, PO Box 358924, Pittsburgh, PA 15251-5924.

Application packages via courier or delivered by hand must be prepared in the same way, sealed in a second, outer envelope, and addressed to Federal Communications Commission, c/o Mellon Bank, 525 William Penn Way, 27th Floor, Room 153-2713, Pittsburgh, PA 15259, ATTN: Wholesale Lockbox Shift Supervisor. This address should only be used for applications delivered by hand or courier.

For general information, call the FCC's toll-free National Call Center, 888-225-5322 (CALLFCC).

MIR HEALTHY ENOUGH FOR SCHOOL CONTACTS

The ARRL Educational Activities Department has gotten the official okay from Johnson Space Center to start scheduling school QSOs with David Wolf, KC5VPF, aboard Mir. The spacecraft's health seems to be improved now that the new computer is installed. A series of problems with Mir, including several computer failures, had put the school contacts on a back burner for the past few months.

For more information on possible Mir school contacts, get in touch with Educational Activities Department, ARRL, 225 Main St, Newington, CT 06111; tel 860-594-0267; e-mail sarex@arrl.org.

Meanwhile, the current Mir crew of Wolf and Cosmonauts Anatoly Solovyev and Pavel Vinogradov remains very busy working and experimenting. Wolf reported recently that he's working up to 16 hours a day--a schedule that gives him little spare time for Amateur Radio. Wolf has been active infrequently on 145.985 MHz FM simplex, and the packet system also was active briefly. During a QSO with Wolf, Miles Mann, WF1F, asked him when he expected to be back on 2 meters. "David said he had six items on this top-priority list, and Amateur Radio was currently number 6," Mann said. The PMS 2-meter station had been turned off while the 13 KB mailbox was completely full.

Mann said the crew needs up to an hour a day to read, reply and delete the daily load of packet mail just to keep the mailbox open. "At the present time, the crew's workload is just too heavy to support this," he said.

The SAFEX II 70 cm repeater is still turned off. The crew is still trying to build up power reserves in the batteries of the space station. The space station is now getting power from all solar panels, except the one that was damaged by the Progress supply rocket collision in June.--SpaceNews via Miles Mann, WF1F

ARRL DEBUTS 160-METER DXING BOOK

The ARRL has introduced DXing on the Edge--the Thrill of 160 Meters, by Jeff Briggs, K1ZM. DXing on the Edge gives an insider's view at what it takes to make it on 160 meters. The book includes lots of interesting Topband history plus an audio CD of some exotic and exciting QSOs made from prominent DX stations. Much of 160 meter history revolves around the late Stew Perry, W1BB. His QSL card remains prize wallpaper for amateurs around the world.

Author Jeff Briggs, K1ZM, is a well-known DXer and contest operator. He has 270 countries confirmed on 160 meters, making him one of the leaders in the DX chase and an expert on this most challenging of amateur bands.

DXing on the Edge is $29.95 (plus shipping). Order Item No 6354. Call toll-free 888-277-5289 or see http://www.arrl.org/catalog/6354/.

HARLAN TECHNOLOGIES IS NEW ATV QUARTERLY PUBLISHER

Amateur Television Quarterly has a new publisher. Harlan Technologies took over the reins of the Amateur Radio niche publication on October 17, following the departure of former publisher Henry B. Ruh, KB9FO. "We have a little catch up to do," conceded Gene Harlan, WB9MMM. He said the Summer 97 issue will be out about November 1, followed by the Fall 97 issue around December 1. "After that we expect to be back on schedule, and it will be our goal to stay on schedule!"

Harlan Technologies had published CyberHam Magazine, which folded earlier this year. Its subscriber list and some departments have since been incorporated into SKIP magazine.

Harlan says ATVQ is always looking for new authors. "I have my own ideas as to what it will look like and the content that will be included," Harlan said. "I hope to keep that content on the video modes of ham radio, which means that I plan on including at least some on SSTV."

US subscription rates are $18 per year ($US20 in Canada and $US26 elsewhere). For more information, contact Amateur Television Quarterly, Harlan Technologies, 5931 Alma Dr, Rockford, IL 61108; tel 815-398-2683; fax 815-398-2688; orders 800-557-9469; e-mail atvq@aol.com; http://www.cris.com/~Gharlan.

SOLAR UPDATE

Solar sage Tad Cook, K7VVV, in Seattle, Washington, reports: The disturbed conditions forecast for last weekend hit quite hard. A coronal mass ejection a few days earlier caused the planetary A index to hit 25 last Friday, 19 on Saturday and 14 on Sunday. This caused HF havoc during the CQ Worldwide DX Contest.

Last week we saw the average solar flux drop a few points and the average sunspot number decline by 10. At the same time the average flux for the previous 90 days went up by one point from 86 to 87, and the solar flux was below this average for six out of the seven days.

This weekend is the ARRL CW Sweepstakes, and conditions for this domestic contest should be quite a bit better. Conditions are expected to be quiet to unsettled, with solar flux climbing from 90 to 95.

Northwest Research Associates has an interesting web site devoted to space weather, including charts of 10.7 cm solar flux, effective sunspot numbers and geomagnetic indices. Check it out at http://www.nwra.com/nwra/spawx/

Sunspot numbers for October 23 through 29 were 0, 11, 13, 14, 44, 50 and 41 with a mean of 24.7. The 10.7 cm flux was 79.7, 78.6, 81.4, 82, 84.4, 85.5 and 87.2, with a mean of 82.7, and estimated planetary A indices were 6, 25, 19, 14, 15, 13, and 10, with a mean of 14.6.

Here are some projections for domestic paths for this contest weekend:

From California to the Northeast: Check 80 meters 2330-1230 UTC, 40 meters 2130-0300 UTC and 0630-1500 UTC, 20 meters 1500-2200 UTC, and possibly 15 meters around 1800-1900 UTC.

From the Southeast to California: Check 80 meters 0000-1300 UTC, 40 meters around the clock, with the strongest signals from 0130-0300 UTC and 0630-1130 UTC, and 20 meters 1530-2200 UTC.

From Ohio to Texas: Check 80 meters 2130-1400 UTC, 40 meters around the clock with the least stable conditions around 0500-0600 UTC and the strongest signals from 0000-0200 UTC and 0700-1130 UTC. Check 20 meters 1500-2130 UTC.

From Seattle to the Midwest: Check 80 meters 2300-1500 UTC, 40 meters around the clock, with strongest signals 0100-0500 UTC and 0800- 1300 UTC, and 20 meters 1530-2330 UTC. 15 meters may open 1800-2130 UTC, and 10 meters might open 1900-2030 UTC.

From the Midwest to Hawaii: Check 80 meters 0330-1400 UTC, 40 meters 0200-1500 UTC, 20 meters around 1600 UTC and 1700-0000 UTC and 0130-0230 UTC, and 15 meters looks very good 1730-2330 UTC.

MICHAEL R. VESTAL, W0YZS/XU6WV, SK

Noted VHFer and contester Mike Vestal, W0YZS/XU6WV, of Cambodia, died October 27 in Cambodia. He was 54. Vestal also had held the call signs VR2WV and SV0FE. His friend, Brett Graham, VR2BG, called Vestal "the personification of a 'real' ham." As W0YZS, Vestal earned the first WAS on 432 MHz. He also was serious about DXing, contesting and developing 160-meter antennas, Graham said.

"His professional life was equally multifaceted, and his technical knowledge was not only extensive, but based on the hands-on, soldering-iron-in-one-hand and 'scope probe-in-the-other approach," he added.

Graham said he would be happy to relay condolence messages to Vestal's wife. Contact Brett Graham at vr2bg@harts.org.hk.

BRUCE O. WILLIAMS SR, WA6IVC, SK

Former ARRL Headquarters staff member Bruce Williams, WA6IVC, of Smithville, Texas, died October 26. He was 71. Williams had been battling lung cancer and reportedly died of a blood clot.

Williams began his League career in April 1985 when he joined the Technical Department and served as the Product Review editor. In August 1987 he became the ARRL Advertising Manager. He loved to construct projects and may be best known for his article "The SIMPLEceiver" that appeared in September 1986 QST. He retired from the League in July 1989 and moved to Texas.

A technical writer and editor from the late 1950s until the early 1970s, Williams also served for about a year in the mid-1960s as vice president and general manager of Swan Electronics Corporation, a former ham radio manufacturer. He also had experience in the aircraft industry.

ARRL Membership Services Manager Chuck Hutchinson, K8CH, used the words "witty, charming and clever" to describe Williams. "We always operated Field Day together," Hutchinson recalled. "Each year we'd try something new--be it

a home-made radio, a new antenna, or a solar battery charger. Those were fun times, and Field Day has never been the same for me since Bruce moved away."

Williams' wife, Charleen, survives.--Thanks to Bruce Muscolino, W6TOY, Chuck Hutchinson, K8CH, and Paul Pagel, N1FB

IN BRIEF:

* This weekend on the radio: It's time for the ARRL November Sweepstakes CW contest! See October QST, page 116, for the rules. Also on tap: the North American Collegiate ARC Championship, CW, which runs concurrently with the ARRL SS and uses Sweepstakes rules. See November QST, page 94, for details.

* Sputnik model update: The hand launching of that Sputnik 1 (PS2) model from the Russian Mir space station now is set for November 3 at 0200 UTC. A working one-third scale model of Sputnik 1 will be tossed out during a space walk by Cosmonaut Anatoly Solovyev. Cosmonaut Pavel Vinogradov will take pictures from outside the spacecraft. The Sputnik model is nearly eight inches in diameter and weighs just over six pounds. It will transmit a "beep-beep" beacon signal, and the tone will vary with the temperature inside the spacecraft (from 372 Hz at -50 C to 1213 Hz at +50 C). US Astronaut David Wolf, KC5VPF, will remain inside Mir during the space walk. According to Guy Pignolet, secretary of the Aero-Club de France, power is provided by three packs of four lithium batteries at 3.5V each. The transmission frequency will likely be 145.820 MHz, and it will be also possible to listen to 145.841 MHz. The 500 mm antennas are circularly polarized, and it will be possible to listen to PS2 in SSB or FM. "The sound will be nicer with SSB, but the Doppler may make the shift appear more complex at the beginning and at the end of the satellite's visibility," Pignolet said. Reception reports go to FR5KJ, the club station at College Reydellet. Include an SASE and two IRCs for a certificate. For more information, see http://www.oceanes.fr/~fr5fc/spoutnik.html.--thanks to Miles Mann, WF1F, and Guy Pignolet

* Vanity update: The FCC in Gettysburg reports it has run vanity call sign applications through October 10. The FCC granted 92 new call signs. Another 89 applications landed in the WIPS stack and have already been dealt with.

* Ariane 502 launch a success: The Ariane 502 launch that was to have carried the Amateur Radio Phase 3D satellite into orbit is being declared a success. The Ariane 502 flight took off from the European Space Agency's facility in Korou, French Guiana, South America, October 30, and the upper stage payloads separated and deployed into a geostationary transfer orbit as planned. In August, ESA dropped Phase 3D from the Ariane 502 manifest when it became clear that AMSAT would not be able to make necessary modifications to the P3D spaceframe to handle additional stress and vibration in time to meet the launch schedule. AMSAT is hoping to fly Phase 3D aboard a future Ariane 5 launch and was anxiously awaiting the outcome of the Ariane 502 launch. The first Ariane 5 flight failed, and the launch vehicle had to be destroyed shortly after launch.--AMSAT

* Orbital calendar to QRT: For some years now, the League has offered a monthly orbit calendar for use with the OSCARLocator. Since requests for this monthly listing have dwindled to less than a half dozen, the League plans to end this service at year's end.--Jon Bloom, KE3Z

* Youngest Extra revisited: We've published reports of boys and girls of 10 and 11 years old earning their Extra class tickets. But Rebecca Rich, KB0VVT, of Raytown, Missouri, could have them all beat. According to her mom, Barbara Rich, KG0UT, Rebecca earned her Extra ticket in March 22, 1997, just a few months before her ninth birthday. In fact, the whole Rich family studied for and passed their Extra tests together, and all of their licenses were issued on the same day. Rebecca's dad is David Rich, KG0US. Rebecca has been a ham since March 1996, when she qualified for her Technician license (see QST, October 1996, p 19). Recently, Rebecca spent several hours operating in the CQ WW SSB contest at the home of Jerry Fisher, NX0I. Says her mom: "I believe that women and youth add a dimension to Amateur Radio that is needed." (Any other challengers for the title of Youngest Extra?--Ed)

* Happy 100th birthday to W7HF! George Wilson, W7HF, of Aberdeen, Washington, celebrates his 100th birthday November 1, 1997. The Grays Harbor Amateur Radio Club plans to honor Wilson at its November 6 meeting. Club member Frank Volz, KA7DNK, reports that Wilson is still active on the HF bands. Wilson has been an ARRL member since 1934.--Frank Volz, KA7DNK

* RF exposure panel: ARRL Lab Supervisor Ed Hare, W1RFI, will join Bob Cleveland of the FCC's Office of Engineering and Technology, and Greg Lapin, N9GL, an RF bioeffects researcher, for a panel discussion and slide presentation, "Keeping your Station Safe and Legal," Sunday, November 2, 2 PM CST, at Karger Recreation Center, 1850 Green Bay Rd, Highland Park, Illinois. The panel is free and open to all. The North Shore Radio Club is sponsoring this event. For more information, call 847-272-8347.

* WSWSS Proceedings available: The Proceedings of the Western States Weak Signal Society's 1997 Technical Conference are available directly from the WSWSS for a limited time only at $15 each postpaid (US only) from Bob Earl, KD6UIH, PO Box 332, Midway City, CA 92655-0332. Make checks payable to the Western States Weak Signal Society. Proceedings also are available from the ARRL for $15 (plus shipping) as Item Number 6346 at http://www.arrl.org/catalog. Topics include: "Single Board Transverter for 5760 MHz and Phase 3D" and "Rewinding Coax Relays for 12 VDC Operation," both by Paul Wade, N1BWT. For information on mailing rates outside the US, e-mail kd6uih@juno.com.

* First China-North America EME QSO: BY1QH again was active on 144 MHz EME on October 25 and worked KB8RQ for the first-ever China to North America EME contact. BY1QH also worked W5UN. The station operator was David, BZ1BM, who had help from Lasse, SM0KAK.--thanks to SM0KAK

==========

The ARRL Letter is published by the American Radio Relay League, 225 Main St, Newington, CT 06111; tel 860-594-0200; fax 860-594-0259. Rodney J. Stafford, KB6ZV, President; David Sumner, K1ZZ, Executive Vice President.

Circulation, Kathy Capodicasa, N1GZO, e-mail kcapodicasa@arrl.org.
Editorial, Rick Lindquist, N1RL, e-mail elindquist@arrl.org.

Visit the ARRLWeb page at http://www.arrl.org.

The purpose of The ARRL Letter is to provide the essential news of interest to active, organizationally minded radio amateurs faster than it can be disseminated by our official journal, QST. We strive to be fast, accurate and readable in our reporting.

Material from The ARRL Letter may be reproduced in whole or in part, in any form, including photoreproduction and electronic databanks, provided that credit is given to The ARRL Letter and The American Radio Relay League.

How to Get The ARRL Letter:

The ARRL Letter is distributed directly from ARRL HQ only to elected League officials and certain ARRL appointees and to paid subscribers of the now-defunct hard-copy edition of The ARRL Letter. For members and nonmembers alike, The ARRL Letter is available free of charge from these sources:

* The ARRLWeb page (http://www.arrl.org/arrlletter/). This version of The ARRL Letter includes any photographs. (NOTE: The ARRL Letter will be posted as soon as possible after publication. Please be patient.)

* The HIRAM BBS: 860-594-0306. (NOTE: The ARRL Letter should be available via the HIRAM BBS no later than the Monday after the date of publication.)

* The ARRL Technical Information Server (InfoServer): Send an e-mail message to info@arrl.org. The subject line should be blank. In the message body, type "send ltrmmdd.txt", where mm represents two digits for the month and dd represents two digits for the day (The ARRL Letter is published every Friday). For example, to request The ARRL Letter file for Friday, January 3, 1997, you'd type "send ltr0103.txt". Then, on a separate line, type "quit". (NOTE: The ARRL Letter should be available via the InfoServer no later than the Monday after the date of publication.)

* The Netcom server, run by the Boston Amateur Radio Club and Mike Ardai, N1IST: Send e-mail to listserv@netcom.com (no subject needed). The body of the message should say "subscribe letter-list".

* CompuServe and America Online subscribers, as a downloadable text file in the services' ham radio libraries.

Well Dick, I took down call signs of the hams spewing profanity and looked
up the class and ages when they were still available on www.qrz.com
You can even tell by their worn-out voices that they are very old pharts
who still believe in slavery.

> Maybe they are like you and DIDN'T get tested for code but got a General
> anyway, Hey?

I don't do profanity so they are not like me. The call signs of those cretins
are well known. Should be relatively easy to find out where they took their
Morse code exams if you can put up with profanity every other word.

For the record, the general who signed for my conditional Morse code exam
had worked me locally on CW numerous times and knew that I, at 25wpm (with
a straight key), could send Morse code faster than he could copy it.

I would be all for *every* ham being retested at his license class level
at *every* renewal period. What you would discover is that probably 80%
of existing hams can't pass the required Morse code exam for their class
(I'm part of the 20% who could). The present Morse code testing
situation surely does remind me of my parent's religion where "once saved,
always saved". Once Morse'ed, always Morse'ed? Hallelujah, praise the
Lord Morse.

Scott:

The code still has a use. During emergencies, remember why ham radio
exists, it does work. Perhaps it is a challange to learn but not
impossible. Those that fight the code are not willing to put the effort
forward to learn the code. You are right on target!

Lee ... the ONLY folks "proposing" the elimination of theory testing
are pro-code radicals like Mike D., who feels that the only valid test
criteria should be in "FedEx skills" so that know-nothings can ship their
malfunctioning radios back to Yaesicwood for repair.

Virtually all of those of us who oppose the code test are strongly in
favor of better tests of the relevant technical knowledge that many
current hams are lacking in ... presumably because they wasted too much
valuable time learning how to beep when they would have been better off
learning something about how radios actually work.

>
>

I'm not sure we want Congress telling the FCC to enforce strictly the laws of this country. Even if it does, the justice department would have to handle much of the enforcement and the court time, and given the present federal court backup, some fool cursing on the radio gets a lot less attention and time than some other to the public more serious crimes. I also note that this is the same group of fellows who urged a drug war, and the end result is that we have more drugs on the streets, more people in prison, and no end to drug usage in sight.

While I would love to see the jammers, the idiots, and bootleggers leave amateur radio alone, I'm not sure that enforcement will really solve this problem. What will partially solve the problem is for most hams to shun jammers, idiots, and bootleggers, and not respond to them at all. It's difficult to get a group of people to do anything in cooperation. I also note that there are some people who find them entertaining, or enjoy competing with them in various ways. Every idiot seems to have his audience that reacts to him, and they too have to be ignored and shunned. Of course, if we all took notes on what we heard, what frequency we heard the signals on, what time we heard the illegal signals, the approximate direction if we had directional abilities, and the field strength, we probably could pressure the FCC into getting rid of the worst of the worst too. First, however I would suggest a few changes to part 97, so that a ham whose license isn't renewed can't operate once that ham is notified that his license isn't being renewed even if in the appeals process.

Ah, but 52% of the survey was in favor of allowing EACH
country to make the code decision for itself. So while US hams
may still favor a code test for the USA, they didn't peak as
a majority to require hams in other countries to follow the
same.

You are thinking of the HR-2510, NOT the HR-2600.

The HR-2600 is usually not modifiable unless a ChipSwitch replacement microprocessor is installed... easy modification was designed out of the HR-2600 software, and the QRZ mods database on CDROM contains only modifications for tailoring audio response for successful packet transmissions (AGC related).

Well, if you were a trained communications engineer, you'd know that's
not true. I suppose that's why the engineers make more money. :-)

Consider this, if OOK Morse (aka CW) had the best SNR, then
situations where SNR is the critical resource would all use OOK Morse.
Now NASA has these probes that are *way* out there, and don't have
much transmit power. The SNR resource is as low as 2.4 db Eb/No.
But they don't use OOK Morse, and that's not because NASA engineers
are a bunch of no-coders either.

It is because coherent modulations with uniform codes perform much
better at low SNR than does OOK Morse. In fact, on off keying is the
worst discrete modulation you could choose for operation at low SNR
(6 db worse than FSK for the same peak transmit power). And Morse is
not a good coding to use because of the irregular symbol lengths which
makes forming a matched filter for their reception impossible. (That alone
costs you about 9 db in ultimate performance.) We won't even mention
the coding gains due to FEC.

CW does compare favorably to analog voice in terms of operable SNR
margins, but then almost everything else does too. That's faint praise
indeed. And of course when SNR margins are even slightly better,
analog voice has about 5 to 10 times the information *rate* of OOK
Morse. That's not the best we can do in terms of beating Morse rate
at a given SNR, but it isn't too bad considering the operational simplicity
of the system.

Cecil, you like proof so well- would you care to quote any realiable source in proof of your claim of "age 65 and over etc?" Or it is it *Just another "fact" you manufacture as needed?* Lets assume it's true-Maybe they are like you and DIDN'T get tested for code but got a General anyway, Hey? You know, that used to be routine for Technicians, "Don't bother code testing them-they're our friends and besides they are only gonna talk on 6mtrs and up anyway, and if they decide later to upgrade they will have to learn the code then anyway". It was done for Conditionals too, and here the participants were REALLY bold. It was common for some surrogate testers to accomodate their 'friends', just as you said your friends did for you.
We still reap the fruits of those abuses. The FCC came up with a fair number of programs to accomodate persons for whom it was a very real hardship to travel long distances to test, then people abused those programs, and now some of those same people abuse the HF bands. They also post no-code nonsense on newsgroups, then claim a holier-than-the-real-world attitude. It's way beyond disgusting.

Most of these abusers kept a pretty low profile until FCC enforcement essentially disappeared. At one time the FCC routinely called in a few Conditional class license holders each year and required them to retest in front of an FCC official. Most who faced mandatory retesting failed. Now the survivors, and the other code evaders, slink out from under their rocks to spread their garbage on the Hf bands. And you advocate adding to their ranks. You are a part of the problem, not of the solution.

GARY C>the *real* reason that things have deteriorated on 75m and 20m has nothing to do with license examinations. It has everything to do with the FCC abandoning *enforcement* over the past several years.

Yes, the threat of FCC action was a pretty big stick for *everyone*. We badly need it back but it's not to be. So I guess we should just give in to the lowlife element and make it easier for their buddies to join them?

GARY C>That's the inconvienent fact that the pro-coders want to ignore because it doesn't fit their thesis of the angelic power of Morse to regulate behavior. Theonly thing that provably regulates behavior is heavy fines and jail time.

I can't imagine where you came up with this beauty--you sure didn't hear anyone on here who is a code test advocate say it, nor anything that can remotely be construed to indicate it--more "Make it fit the No-Code Agenda stuff" obviously. What HAS been said is that *You don't see this kind of stuff from code operators nor advocates*
Code has no magic--it is simply the basic communications mode for ham radio operators.
That won't change just because a few technocrats don't want to be bothered to learn it.

There's no way to prove it, but-- most of the troublemakers in HF -and ALL the ones with which I have personally been familiar--are persons who, in one way or the other, finagled their way around the code tests--as indicated in the top paragraph. There were, and still are, a LOT of those folks around, and their ranks have grown larger in the past dozen years. They are still doing what they do best under the no-enforcement atmosphere present today-They got away with scamming out of the code test-why shouldn't they get away with whatever else they want? Such easy licenses have little value anyway, and besides, losing ones license today is very unlikely anyway.

Don't blame it on the code--you won't see any of this garbage among persons who are REALLY code people--just among the phonies and scammers-they're the jammers and garbage mouths.

>life expectancy.

Off topic but I just read a report on a study which shows that if you
are 65 or older, a higher cholesterol correlates with a longer lifespan.
They found that if your cholesterol count is more than 50% over the
recomended average value, you have a much higher chance of surviving
to age 85 than if your cholesterol count is at the recomended average or
below it. By much higher I mean that 88% of the control group who
had low cholesterol were dead by 85 while only 26% of the group with
high cholesterol were deceased by 85. The high cholersterol group
had fewer cancers, less heart disease, and a higher resistance to
infectous disease than did the low cholesterol group.

Makes one want to pig out on a bucket of lard doesn't it?

But before we rush to judgement, it should be noted that the researchers'
hypothesis is that people who can tolerate high cholesterol levels are just
more fit to survive in general than those who can't tolerate high cholesterol.
So the high cholesterol group were the more evolutionarily fit survivors
of the larger group of people with high cholesterol, IE the weenies who
couldn't take it were all dead by 65.

This makes no sense at all. Morse Code isn't stopping any CB'rs from getting a NO-CODE ham license. In fact, MOST CB'rs who have gotten on the Ham bands, sell their Ham gear and go back to their CBs so they can talk NORMAL like on a telephone, and NOT like typical Hams who have to talk for 2 minutes straight before they let the other people speak. You are also able to remain anonymous without everyone being able to look up your name, age, and address.

The attitude of not wanting "certain types" of people on the Ham bands, or trying to make it harder for new people to become Hams by making them learn an obsolete skill, contradicts the OTHER complaining that there aren't enough Hams using frequencies and bands to keep them.

What would you rather have, more people on the bands that you don't like, or no bands for anyone?

True. And the numbers of HF active hams is shrinking. The Ole' Ham
Spirit is dying in America. Sad, but true. Some see it as an opportunity
for less competition in contests and DXing. I see it as a crisis.

Hams need to be courting the CB radio operators who show interest in
radio operator spirit. Forget about the "cultural" differences and lingo
for a moment. There are a lot of good ops on 11m. Just listen to the
stations using SSB on 11 meters some time during good propagation. Try
to tell me that some of them would not make good contest ops or
DXers...?

> I have worked 16 new countries on 12m the past month.

Congrats, David!
You are one of the elite few who venture into that band :-).

> Some of the 12m Dx pile ups cover 5 or 10 khz.

Think about that for a second, David... only 5 or 10kHz...?
Granted, the activity is picking up...
Try tuning 27.385 & 27.395 LSB, if you want to hear 10kHz of really
continuous pileups. (you probably already know)

> As for 10, its true there are not many Q's above 28.5 but the CQ ww
> SSB had stations up to 28.750 and in 1988 it was wall to wall from
> 28.3 to well over 29 mhz.

Are we talking about a few weekends per year?
Operation has tapered off since 1988. Not entirely due to propagation.
There are less active hams on HF now.

> USA AM is quite active on 29 and 29.1

Maybe a handful of stations per day on a few freqs, in a few locations?

> Just wait for sunspots over 100

10, 11, and 12 are wide, wide open right now for DX, and 10 is great for
local, but where are the ops?

> and the 10 meter contest or a Dx contest to load 10...

For a few weekends per year?

The Spectrum Gobblers see wide open spaces of gold between 24~26, 28.0~28.2, and 28.5~29.5 MHz!

Small viewpoints of "Us vs Them" need to start becoming a thing of the past.
We need to somehow increase the number of radio operators! Don't tell me about quantity vs quality. While we are looking for the "perfect" candidates, our frequencies will fall by the wayside. Tell me what a "perfect" operator any of us were when we had our first QSO.

We need to bridge the gap between people who have become alienated in the past. Unification. Sort of like Germany. We speak a common language, radio.

Spectrum: Use it or lose it. That's how it works.

Amor Powers

Ah yes, when you can't argue with logic and facts, then just claim
a conspiracy or hidden agenda. What garbage. You'll
not ever find me suggesting any lessoning of the theory requirements

as Todd has apptly noted.

SILENT KEY

It is with regret to announce that Alan Burt VK2XF passed away on
Tuesday 28th October following a long illness.

Allan was the oublicity officer for the St George Amateur Radio Society
for many years as well as holding other club positions.

He will be sadly missed by his many friends and family.

-- Alan Sullivan VK2BAS

DIVISIONAL NEWS

AFFILIATED CLUBS NEWS

Attention Clubs your Conference of Clubs is on at Amateur Radio house
on 15 November commencing with coffee and biscuits at 8.45 am,
business commences at 9.00 am.

If your club has agenda items for the conference please send them
together with the registration form and fee to Amateur Radio House by
Monday's post.

-- Ken Westerman VK2AGW, VK2 Affiliated Clubs Officer

INFORMATION WANTED FOR LIBRARY

We have had requests for the following manuals. If anyone has a copy
they would be willing to lend the Division, so that it can be copied and
returned, we would be very grateful. The manuals are for a:-

- Galaxy 3 Transceiver

- a Workshop Manual and/or printed circuit diagrams for an Atlas
210X. and

- a Tait T196 Miniphone

If anyone has any of these, please could they either send them to the Divisional Office, where they will be photocopied and sent back by return mail, or telephone the Office to make alternative arrangements.

Thankyou.

-- Aub Topp VK2AXT, Divisional Librarian.

DURAL COMMITTEE MEETING

A reminder that the next Dural Technical Committe meeting will be held following the morning callbacks on Sunday the 9th November.

--Tim VK2ZTM

WICEN NEWS

Following our plea for additions to the WICEN calendar, some events have appeared; we are sure that there are many events which do not require any further personnel, but publicity of same would certainly be beneficial to WICEN as a whole. Besides, should an exercise not be officially notified, then for all intents and purposes it simply does not exist, and would therefore be ineligible for VRA insurance. Should the worst happen, in that case, we would hope that the event organiser has lots of assets! In other words, it's your house, versus a piece of paper...
Of interest to our listeners on the Canberra border is that WICEN ACT are looking for Amateurs to assist with this year's FAI Rally of Canberra.

This event runs from lunchtime Friday November 28th until the afternoon of Sunday November 30th. Those interested in assisting are asked to contact either Simon Trotter VK1AUS, SCO WICEN ACT, on 0419-439-925, packet as VK1AUS at VK1BBS, Internet as vk1aus@dynamite.com.au; or Phil Longworth VK2ZPL, DSCO WICEN ACT on (02) 6216-4889 during business hours, or packet as VK1ZPL at VK1BBS, or Internet as Phil.Longworth@ato.gov.au

Another exercise this month is the "Ironman Australia" Forster-Tuncurry half triathlon, to be held on Sunday 23rd November. The event coordinator for this exercise is Steve Pettet VK2KXQ, to whom all enquiries should be directed, via telephone on (02) 6555-3177, or packet radio as VK2KXQ at VK2EO. This event is a half-triathalon and is a qualifier for the major international event to be held again next April. It's
only the second time that the qualifier has been run. Last year there was no WICEN or any other Amateur Radio involvement in the event, as the organisers believed that the commercial radio network would suffice. It seems that this may not have been the case since WICEN has now been asked to assist in this as well as the major event, and 24 operators are required. You will have to arrange your own accommodation if you intend to stay overnight on Saturday 22nd, and some camp sites are available at no cost at Smugglers Cove Caravan Park, 45 The Lakes

Way, Forster. The sites are held under the name of WICEN. Book in on (02) 6554-6666 ASAP. The briefing for this event will be held at 1800 hours on Saturday 22nd around the Hunter WICEN van which is to be located adjacent to the surf club at Forster Beach. The frequencies of 146.525 MHz FM and UHF CB channel 20 will be used as liaison frequencies on Saturday.

Looking into the future, we have been advised that the date for the next Bushwalkers Rogain is the weekend of 27-28th June, next year; the location is to be advised, and the commander is Alan VK2YYJ.

If any region has any news or information they would like published, then please contact the Publicity Officer, Dave VK2KFU. If further information about WICEN (NSW) is required, please contact the acting State Coordinator, Alan VK2YYJ, on the WICEN mobile telephone, 015-097-217.

-- Dave Horsfall VK2KFU, President, WICEN (NSW) Inc.

DX REPORT

MAURITANIA - Yoshi JA1UT and other JAs from the International Amateur Radio Volunteers group may be active at 5T5U from November 6 to 13. Look for activity on the lower HF bands. Some RTTY is expected. The IARV group is here on an aid program run in conjunction with the Paris-Dakar Motor Rally and UNICEF.

BAHAMAS - Members of the Lynx DX Group will be active from Abaco Island, IOTA NA-80, until November 8 as EA2KL/C6A and EA3ELM/C6A. CW and SSB Activity is expected on all HF bands, including 17 and 12 meters.

SABLE ISLAND - CY0DX has been on 40 meters at 2200z and 30 meters at 2130z. Operations are on all HF bands.

PHILIPPINES - Robin DU9RG will be using the special callsign 4I9RG for the month of November. This call is used to celebrate the 65th anniversary of the Philippine Amateur Radio Association.

IRAN - Ali EP2MKO is on 10 meters between 0745 and 0900z.

GUAM - Gary K9AW is active as K9AW/KH2.

SAO TOME - Francisco CT1EAT will be signing as S92FC until November 4. He will operate SSB on 20 to 10 meters.

CHAD - Michael TT8KM has been active using CW, and expects to be active on RTTY soon.

ASCENSION ISLAND - Paul KF4OOX is operating as ZD8V. Look for him on 20 to 6 meters, from 1800 to 2300z.

YUGOSLAVIA - The Senta Radio Club will activate Special Event Station 4N0S until December 31.

SPECIAL EVENT STATION 4U1WRC TO MARK 1997 WORLD RADIO CONFERENCE

The International Amateur Radio Club in Geneva will operate 4U1ITU under the call sign 4U1WRC to mark the Radiocommunication Assembly (RA-97) and the World Radiocommunication Conference (WRC-97) that get underway there later this month. A commemorative QSL card will be available for contacts between October 20 and November 21, 1997. 4U1WRC will be operational in all modes, including PACTOR and CLOVER.

4U1ITU is maintained by the IARC for the use and benefit of club members and by other licensed radio amateurs. It's intended "to serve as a model of amateur radio operation at its highest standard." The station is located at ITU headquarters.

-- ARRL DX Bulletin 46, dated 30 October, 1997

GLOBAL HILTON HAM STATION

There will be a ham radio station on board the Global Hilton high altitude balloon when Dick Rutan, KB6LQS attempts his around the world flight next year. Ken Collier, KO6UX, of ADI Premiere tells Newsline that his company has loaned the balloon crew one of its AT-600 Dualband HTs and several SB-752 power stations. Collier says that he suspects other manufacturers will be loaning them additional equipment as well. Rutan plans to make the flight with famed balloonist Richard Abruzzo with liftoff in late January.

-- Amateur Radio Newsline, dated 24th October

MANAGER WANTED FOR "VKs ON INTERNET" LIST

Listeners who are active on Internet are probably aware of the "Vks on Internet" list maintained by Guy Fletcher VK2BBF. The list is a useful reference, acting as a "White Pages" of VK Amateurs. Currently, some 400 Amateurs are listed, with about two new entries being added each day.

Guy is looking for someone to take over the management of the list. Since he retired last year, he has found it less convenient to keep the directory up to date.

If you have Internet access, basic Web page development skills, and the time to add a few users each week, then this could be a great opportunity to provide a service to the Amateur community. If you think you could manage the "Vks on Internet list", then please drop Guy a line. Guy's email address is guy@mpce.mq.edu.au, or contact the Divisional Office.

-- Guy Fletcher VK2BBF

SPACE NEWS

SPUTNIK MODEL LAUNCH NOW SET FOR EARLY NOVEMBER

The latest information about the launch of that working model Sputnik 1 from the Russian Mir space station is that it will take place in early November. According to information received October 17 from Sergei Sambourov, chief of the cosmonaut Amateur Radio department for Russia's Energia space agency, the Sputnik 1 model will be launched November 3 during a spacewalk, although he cautioned that schedule could change. Two identical copies of the model Sputnik, assembled by students in Russia and equipped with a 2-meter transmitter by students in France, now are aboard Mir. They were carried to the space station earlier this month by a Progress supply rocket. Program sponsors initially intended to have the working Sputnik model launched from Mir on October 4, the 40th anniversary of the original Sputnik 1 satellite. One of the working models of the Sputnik-40, as it's called, is to be hand-released by the Mir crew during the space walk. Latest information indicates the mini-satellite will transmit a "beep-beep" signal on or about 145.82 MHz (FM) from its 200-mW onboard transmitter. The batteries are expected to last a month or two. A QSL card will be available for those who receive the signal.

Guy Pignolet, secretary of the Aero-Club of France and an engineer with the French Space Agency said the project still needs financial support. "We have a lot of unpaid bills (we had to go ahead), and we still need about nine sponsors at $6000 each," Pignolet said. He says the program would very much like to have US companies or even individuals "share the adventure together with the Russian and the French sponsors." A Brazilian company, TECSAT, this week signed on to sponsor the Sputnik 40 Years school satellite program.

(For more information, check the Sputnik link on the VK2 Divisional home page, in the "What's New" section.)

Meanwhile, the Mir packet system is temporarily off-air. Because of his heavy workload aboard Mir, US astronaut Dave Wolf, KC5VPF, has not had any spare time to read or respond to the mail on the Mir's packet system (PMS or personal message system). The packet mailbox is full, however, so Wolf has shut down the packet system until he has some spare time to read and respond to the mail there. He expects to be back on the air soon.

-- ARRL Letter Vol. 16, No. 42, dated 24th October, 1997

US Astronaut and Radio Amateur Mike Foale also features on the front cover of Time magazine (3rd November edition), with a story entitled "How I survived Mir".

SELF HELP RFI GUIDE FOR CONSUMERS

Consumers who are affected by radio interference may be helped by a new publication brought out jointly by the Consumer Electronics Manufacturers Association and the American Radio Relay League. According to an FCC release the document is available on the world wide web.

-- Amateur Radio Newsline, 24 October

(You'll find a pointer to the document on the VK2 Divisional home page,
in the "What's New" section.)

CLUB NEWS

THE NEXT MONTHLY MEETING OF THE ILLAWARRA AMATEUR RADIO
SOCIETY INC . WILL BE HELD TUESDAY EVENING NOVEMBER 11TH .
THIS WILL ALSO BE THEIR ANNUNAL AUCTION SO CLEAN OUT THOSE
UNUSED ITEMS AND TURN THEM INTO CASH .ALL ITEMS FOR THE
AUCTION MUST BE BOOKED IN BEFORE 7PM AS THE AUCTION WILL
START AT 7:30PM . SO GET ALONG TO THE S . E .S BUILDING
MONTAGUE STREET NORTH WOLLONGONG WITH YOUR UNWANTED
ITEMS AND OF COURSE YOUR CASH AND GRAB A BARGIN .AS IT'S
ALSO REMEMBERANCE DAY IT SHOULD BE A NIGHT TO REMEMBER !!
IF YOU WOULD LIKE MORE INFORMATION RE THE AUCTION OR ANY
CLUB ACTIVITY CALL BRIAN FARRAR ON (02) 42267 2296 AFTER
HOURS MOST DAYS . HOPE TO SEE MANY BARGIN HUNTERS AT THE
AUCTION , AND REMEMBER TO BRING YA MONEY WITH YA !

--CHEERS FROM BRIAN VK2UBF PUBLICITY OFFICER I.A.R.S.

HORNSBY & DISTRICT ARC INC.

The next meeting will be the informal get together on Tuesday the 11th .
of November, in the Mount Colah Community Centre, Pierre Close,
Mount Colah. (near the eastern entrance to the railway station.) at 8:00
pm. This is a chance to, talk to others about any problems that you have
with equipment, and seek other opinions or how someone else
remedied the same problem.

The Club net is every Monday night using the Club call sign VK2MA.
through the Club repeaters VK2RNS. and VK2RAT. The frequencies are,
147.250 with a positive offset, and 439.975 with a 5mHz negative offset.
All are welcome to join the net, and listeners tune your receivers to
147.250 or 439.975. Yes! we would like you to join the net or come along
to one of our meetings, you will be most welcome.

If you would like to know more about the Club, or its activities wrte to
HADARC., Post Office Box 362., Hornsby 22077., or phone John
VK2WRT on 9807 2490 again 9807 2490.

-- John. W. Turner Publicity Officer

AUSTRALIAN AMATEUR TELEVISION CLUB

THE NEXT MEETING OF THE A.A.T.C. Inc WILL BE HELD ON
NOVEMBER 9th AT NURRAGINGY RESERVE DOONSIDE/BLACKTOWN
SEE THE AATC WEB PAGE AT RCS RADIO FOR EARLY DETAILS -

NOTICES WILL BE POSTED OUT MONDAY 10.00

CONTACT BOB BARNES FOR ATTENDANCE DETAILS.
FOR MORE INFORMATION ABOUT ATV, CONTACT BOB THE
PUBLICITY OFFICER ON (02) 9587-3491 DURING NORMAL CIVILISED
TIMES.

--AATC Inc. Publicity Officer Bob Barnes

RADIO AMATEURS OLD TIMERS CLUB

MEMBERS AND FRIENDS OF THE RADIO AMATEURS OLD TIMERS
CLUB ARE REMINDED THAT THE NEXT SERIES OF BROADCASTS AND
CALL BACKS WILL TAKE PLACE ON MONDAY 3 NOV

We have a broadcast of news and information on the first Monday of
each month except January using the special callsign of VK3OTN. They
are as follows:

10am - Melbourne time all years, i.e. both E.A.S.T. and D.S.T.
145.700 mHz FM. 7.060 mHz.SSB 3.650 mHz.SSB

0100 hours UTC all year 14.150 mHz.SSB beamin North.

0200 hours UTC all year 14.150 mHz.SSB beaming West.

8:30pm - Melbourne time all year 3.650 mHz.SSB.

Call backs follow each transmission.

NEWS FOR INCLUSION IN THE CLUB BROADCASTS WILL BE
WELCOMED BY CLUB SECRETARY ARTHUR EVANS VK3VQ OR ALLAN
DOBLE VK3AMD BOTH OF WHO ARE OK IN ANY CALL BOOK.

-- ARTHUR EVENS VK3VQ

>DXers...?

11m? DX? I assume you're also talking about outband operators,
as they're the "real DXers"

At any rate, CB and DX are illegal in the US when put together.
This is unenforceable, and silly.

Outband operation, where most "CB" DX occurs is completely illegal.

So you're recommending filling the ham bands with people who
willingly violate the laws of the country in which they live?

Great. I'm sure they'll start abiding by the laws in their
"new" bands. Gee, if they're SUCH great bands, why aren't the
outbanders already legal and operating as hams?

As for legitimate CB SSB ops, the more the merrier, so long
as they pass the tests. The door's already open.

>> I have worked 16 new countries on 12m the past month.
>
>Congrats, David!
>You are one of the elite few who venture into that band :-).

Congrats, David - but I check 12m every day as well. From the
mobile setup, I've heard a few strong signals in the past
month. September was particularly good for 12m. However,
with all of the STRONG SIGNALS being worked by hundreds
of people (note <<ACTIVITY>> I couldn't sneak in.

But mostly so, due to propagation. I used to operate 10m
during the sunspot cycle. I do a lot more 40 & 30m operating
at this point. As 10 opens up, I'll be there.

>
>> USA AM is quite active on 29 and 29.1

>
>10, 11, and 12 are wide, wide open right now for DX, and 10 is great for
>local, but where are the ops?

20 is FAR better, as is 15. When you've got many bands for picking
peak propagation, you generally work the one that's most open.

With the solar flux at 85, I wouldn't consider 10, 11, and 12 meters
to be "open" like 15, 17, and 20 are "open."

>about quantity vs quality. While we are looking for the "perfect"
>candidates, our frequencies will fall by the wayside. Tell me what a
>"perfect" operator any of us were when we had our first QSO.

All it takes is the ability to pass some tests. Your point? Nobody
is waiting for any perfect operators. CB SSBers are obviously
quite happy as CB SSBers or they'd have their ham licenses too,
don't you think? Some do.

>We need to bridge the gap between people who have become alienated in
>the past. Unification. Sort of like Germany. We speak a common language,
>radio.

Alienated in just what way? I was alienated from CB because I was
treated badly on the air when I was 12 years old by a bunch of
apparently drunk, profane jerks. I wanted no part of it, and
that became my "springboard" to discovering ham radio. Fortunately,
I was introduced to the 40m Novice CW band before discovering
20 and 75m SSB and some of the 2m repeater crowds (this was 1984).

However, when a CBer asks a seemingly silly question, I still answer
in the most technically articulate way possible, with the hope
that the person will understand what I'm saying and, at the same
time, understand more of how the world works (given physics as we
know it).

>
>Spectrum: Use it or lose it. That's how it works.

Basically true.

I still have for sale a Kenwood TH-22AT 2m HT with the following:

* new NiCad battery pack

* alkaline battery pack

* speaker mike

* wall charger

* rubber duck, original box and manual

The rig is menu driven, has 40 memory channels, one call channel, CTCSS, DTSS, a full DTMF keypad, multi scan modes, three transmit power settings for battery conservation, and a lot more.

Everything is working fine. I need to sell this package to upgrade.

$225 shipped obo over $200

Sounds like CW in the pro-code community to me:
1. CW is understood to have the magical power to get through in
emergencies. Note the emergency management people do not believe in this
magic.

2. CW is an object of obsessive reverence.

We here this admonition all the time -- but no one says how much time is
"enough". Some people learn high-speed code easily; others have a much
more difficult time, spending many times the hours to accomplish little or
nothing.

We should drop the Morse Code Fetish and level the playing field, so people
of equivalent intelligence can spend roughly the same amount of effort to
reach the same level of licensing.

A powersupply is cheaper than a good battery chager setup. Safer too.

>I need the setup to keep the battery safe, both preventing explosive fumes
>from building up, and to properly charge and monitor the battery.
>I'm thinking of putting the battery in either a plastic tool box that I can
>lock (I have a very curious and versatile 2 year old) or in a small pet
>carrier (I won't have to drill lots of holes for ventilation in the pet
>carrier as I would in the tool box).

For the money and security, spend $20 for the appropriate marien battery box
with the single hole for the vent, many have locks too. I could see a
potential accident with the 2 year old if s/he deceided to stick some wire or
other conductive device through the holes in the pet carrier. It's not the
12volts you nned to worry about, its the 150 amps behind it that could be a
problem.
>
>Questions:
>
>1. What car, marine, etc. heavy duty battery is best?
> Critical Specs
> or
> Specific Model

I cannot recommend specific models, but I do know a Marine battery is more
designed for this type of activity thatn a regular car battery. The marine
battery was meant to be "deep cycled" and have most of the power taken out of
the battery and then recharged. If you were to do this to regular car battery,
you'd destroy it about the fifth time you drained the battery. Regular (car)
batteries are meant to stay fully charged.

>2. What battery charger should I use to prevent damage to the battery and
to keep it
> properly and fully charged - without generating rf noise in the
>process (and to
> preferably have a reasonably accurate display of the battery
>condition).

There are chargers that are specifically for Marine Deep cycle batteries, as
they cannot be recharger *porpoerly* with a regualr charger, although it may

work. It won't promote longevity of the battery, which will likley cost in excess of $100. Marine batteries and regualr car batteries are entirely different batteries with entirely different charging requirements.

There are also devices that will charge a battery if the voltage drops below a certain level. This insures that your battery will stay topped off, but I am uncertain as to whether this type of charger, and "topping off" s a good practice for a marien battery.

If you're concerned about the noise from the charger, which you will likley get since the charger is not filtered, a few capacitors from radio shack will easily filter the noise or you can buy a regular car stereo noise filter fro radio shack.

>When AMPS was designed, it would have taken a truck full of electronics
>with its own generator to meet your requirements. I hope you're not an
>engineering student. *sigh*

When *was* AMPS designed? Would it not have been relatively easy to include some simple form of scrambling like voice inversion, even at that time? And certainly *something* more sophisticated could have been added to the system by now. Certainly, it would cost something, but plenty of people would be willing to pay for it if it was marketed honestly. Make it clear that the standard phone is easily receivable by the public, while the scrambled phone (which costs more) is not, and let the market decide.

Instead, we have a radio system which pretends to be part of the telephone sytem, including the expectation of privacy that people have come to have from landline phones, yet the over-the-air system is completely in the clear using a very common modulation. And when these security concerns are brought up, the response of the industry is not to acknowledge that the system is easy to listen to, nor to design in some security, but to push for laws making listening illegal.

Now, these don't really seem to be technical issues. I find it extremely hard to believe that *all* of the engineers who designed AMPS were completely unaware of the privacy issues. And I think it completely implausible to believe that privacy could not have been improved by technical means in (say) the last 5 years. But the decision to push legal methods of giving the illusion of privacy rather than just fixing the problem was certainly the decision of the cellular industry.

Dave

Source record: 187666

PORTABLE SHORTWAVE RADIO

1. NATIONAL PANASONIC MULTIBAND MODEL T-100MD FM-AM 4 Band 12 Transistor 5 Diode. This radio appears to be in decent shape. Obviously this is not a Zenith Transoceanic, but for some of the radio buffs who are into vintage Japanese radios--it may be of interest. The Radio's only problem is the corroded 7 D cell batteries that have to be replaced. From what I understand radio worked the time wife's Aunt used it years ago before she went into nursing home. It does not run on AC current--strictly a deluxe portable for its time.

Radio's Controls, Etc.:

- Illuminated Dial Button
- Band Selector: FM; AM; MB; & SW.
- Internal Telescoping Antenna
- AFC Switch
- Tuning/Battery Level Meter
- Off/On Volume; Bass & Treble Knobs
- Tuning & Fine Tuning Knobs
- Aluminum World Time Table Rotating Dial on back of radio
- Has bunch of inputs/outputs

1. MPX
2. EXT. AMP
3. Ant.
4. Earth
5. Phono
6. Phono/Radio Switch
7. Earphone
8. FM EXT ANT (Two jacks)

Will consider any reasonable cash offers or swap for a military type or Hickok type tube tester.

Maybe you'd get more donations if ARRL, would stop excluding
people by demanding they learn morse code.... Idiots ! I hope
your satellite blows up on the pad ...

Maybe then all the old men who whine about their latest operation
at the hospital would step aside and let the next generation of
ham operators update the hobby into the 21st century (where morse
code has outlived it's usefulness).

1815. ALPHA/POWER EXTENDED WARRANTY OFFER!!

Newsgroup: rec.radio.amateur.misc
Date: 1997-11-01 00:00:00 UTC
From: sandy@sandy.com
Message-ID: <345abab8.0@news.surf.com>
Source record: 187672

I'm posting this for my friends at Alpha,
please respond directly to them. Tnx.

ALPHA/POWER EXTENDED WARRANTY OFFER!!
Available for all Alpha 87A's and Alpha 89's
through December 15, 1997!

For a limited time, we are offering you the opportunity to extend the best warranty in the business (four years from purchase) by up to another FOUR YEARS, on every Alpha 87A and Alpha 89 ever built. We don't expect to see your Alpha back in our shop for repair, but even space shuttles break down occasionally! Here is the opportunity to insulate yourself from that rare possibility. And the warranty is fully transferable, too.

Even if your amplifier is already out of warranty, between now and December 15, 1997, we will cover your Alpha 87A or 89 without an inspection at our factory. This is a ONE-TIME OFFER for those amplifiers that are already out of warranty, so sign up now. So, ACT NOW!

Service Years of warranty	Service & Parts Alpha 87A	Parts Alpha 89
1	$250	$230
2	$340	$310
3	$420	$380
4	$490	$440

This extended warranty is subject to the same terms & conditions as the original ALPHA/POWER limited warranty. This warranty does not cover amplifiers damaged by operator abuse or acts of God (i.e., lightning, floods, earthquakes, fire, etc.).

Call us today to extend your warranty! This is a limited time offer and this program may be modified and/or discontinued at any time, at the sole discretion of Alpha/Power, Inc.

Tel: (970) 535-4173
Fax: (970) 535-0281

The solution is money. Design, parts and ergonomics all are costly.
These small multi-band recievers are all analog el cheapos that will
only leave you wanting more. If your budget can't stand the heat try a
Yacht Boy (Grundig)305 or the lowest cost Sangean radios (Radio Shack
has a clone). Either will out perform all of the little cigarette pack
sized radios hands down.

Out of curiousity, how many callsigns did you copy down? 50? 100? 500?

Out of 500,000 HF-eligible hams, even 500 different "troublemakers"
represents only 0.01% of all licensed hams.

Of course, maybe I should spend a little time on VHF collecting callsigns
there. I wonder how the license-class distribution would change?

>W1HYV

Alan, the morse code is NOT used at all for amateur
emergency communications. It is not integrated into
any amateur emergency preparedness (RACES, etc.)
activity. It hasn't been used by amateurs in an emergency in years.

That is the situation today. Emergency comms depend
on voice for the most part because it is the most effective.
All those hypothetical stories of needing CW in any emergency
are pure fantasy as the reality does not bear
out use of code at all in spite of many actual
major storms, earthquakes, fires, etc every year.

I see you are still using the same old weak argument. Let me ask you 2
questions.

1) If the code requirement was dropped. Would you up-grade from
Tech-Plus to a higher class license?

2) If so, what would be the reason for the up-grade? I.E. What would you do
with the higher class license?

Just wondering........

The Successor to Ham Radio?
Internet Phone:

There are several reasons why I have traditionally disliked computers. First, their languages were apparently developed by cyber-recluses with little understanding of communication; second, they interfere with radio reception; and third, hardware and software become obsolescent the moment you purchase them.

I've been a licensed ham radio operator for 44 years, seduced by the mystique of glowing vacuum tubes, nurtured by friendly hams who were glad to see me aspire to the hobby. But my interest in ham radio has waned over the years as I saw talented hobbyists drawn to computers, heard bicker-ing and confrontation over the previously gentle ham bands, and encountered growing numbers of appliance operators with no knowledge or interest of the technical aspects of the hobby.

The allure was gone; the romance of hearing a distant, expectant voice calling "CQ", the art of building home-brew equip-ment and accessories gone with the wind. Then, just a couple of months ago, I had a reawakening, an epiphany, so to speak, as I was walking through the office.

My son Bill, our computer manager, was, as usual, talking to his computer. But sud-denly I realized the computer was talking back! A distant, friendly, female voice on the other end somewhere. I asked Bill, "Where is that coming from?" "South Africa" he answered!

Wait just a darned minute; this is a digital device. It has no emotion, no humanity, just zeroes and one, bits. Moments later, I heard a

distinct British accent, then French. I stood in awe, almost in reverence. I was experiencing the same excitement, the same captivation, that held me nearly a half century ago. Tears came to my eyes. I knew exactly what was happening: I was witnessing the renaissance of hamming.

The art of communications had come full circle, from the personal analog days, through the impersonal digital age, and now back again to humanization, The enticement was irresistible. Bill knew he had me; he smiled and handed me the mike. I spoke into it and another friendly voice came back to me from another part of the world. It was a magical moment as we chatted, exchanged experiences and discussed our setups.

No license required. No code or theory test. No antenna. No expensive transmitter or receiver. And no static. All for about a dollar an hour. It's called Internet Phone, and it won't be ignored.

Ham radio will always hold a warm spot in my heart; the memories are precious and the experiences are forever. But I believe that amateur radio has had its moment of fame. It was a beacon during the experimental era of radio communications. But now our frequen cies are being sold to the highest bidder; interest in home brew, and even parts to build it, are hard to find; equipment is becoming exorbitant to acquire; computers are attracting the interest of the young; public awareness of ham radio is growing more distant.

While I am reluctant to let go of ham radio as I knew it, I bow to the new forms of personal communications. Low earth orbiting satellites will provide worldwide wireless in the near future, but Internet Phone provides hands across the sea now. Let us welcome the new era of intercommunication.

Amateur Radio in decline, it sure is, 10 years ago it was difficult to
find a spare channel on 2m FM, now often there are no simplex channels
in use at all in the evenings. (Just one example of many). Why ?
Well amateur radio is mostly tailored for those who remember the early
days and love valves ond other old technologies. If we get did of the
compulsory MORSE TEST for class A licences, improve Packet Radio with
very much higher baud rates so I can communicate with my Browser through
Packet etc. then the young technically minded might start to take us
seriously..

Re cellphones, digital and analogue.

In Australia the analouge cellphone system is owned by the government
telephone company, and resold by one private telephone company.
All other cellphone networks use GSM digital with encription.
The analogue system is to be turned of on 1/1/2000. After that we will
have only GSM digital. There are no restrictions on scanners but there
are laws affecting what can be done with information obtained by
listening.

No, I'm not prepared to even *know* how much another agency
would be charging us. I haven't seen any discussion about the
subject coming from AMSAT. Why do you ask? Are you interested
in becoming my financial adviser or are you just being sarcastic?

As for "worse and worse", look to the thread "Arianne 502
Successfully Launched" and read the post from Rob Janssen.

"Delicate" negotiations that have to be kept secret might
not be in the best interest of the AMSAT members.

That's pretty much the case in Canada too. The annoying thing is
that most radio equipment sold in Canada is identical to that sold in
the U.S., so most receivers available here have these two particular
notches carved out of the 800 MHz coverage, even though there is no
law requiring that here.

greetings

I have a question for you.

'IF' the morse code were dropped form hf entry into the amateur radio licencing system, what would you (a) suggest be put in its place, and

(b) what would you like the overall exam to be like?

Larry ve3fxq

p.s. i am not for the hf nocode, I am just asking the question.

1849. Wanted: LCD displays for HAM project

Dear HAM reader,
I have created a synthesizer control board for surplus tranceivers sold in the Netherlands, however, I cannot get my hands on enough LCD displays to make all HAM people happy here. Can someone give me a hint where I can get a few 100 pieces of these things? What I need is a few hunderd surplus LCD-displays:

2x16 characters,
14 pin bus (8051-alike interface).

Size and color of background etc. does not care.
Please reply to my Email address.
Thanx and best '73!
Marc PE1-RRT msimons@iaehv.nl

What's wrong? Afraid you might actually learn something modern and useful?
Afraid you might have to "work" a bit to learn it? Or simpluy afraid that
you aren't capable of learning it?

Gene,

The JPS unit (ANC-4) also has an input for an external noise antenna.
It also has a money-back guarantee if you don't like it. Buy one, see
if it takes care of your noise problem, and if it doesn't, send it
back. All you're out is shipping.

Yea ... it "sets apart" for sure ... it makes us look uniquely backward
and stupid because we refuse keep up with the times and use better things
like everyone else is. That translates to "Those hams are stuck in the
dark ages and refuse to adopt modern technologies that are useful and use
the spectrum more efficiently. Let's take their bands and auction them off
to (fill in some plausible type of commercial service)."

OLD REEL TO REEL & CASSETTE RECORDERS (need some level of repair or for parts)

1. SEARS MODEL 7230 - needs repair

2. REVERE T-1100 - needs repair, no power cord

3. TELECTRO 1/4 track and 1/2 track - Plays but has hum. Seems like a weak tube.

4. WOLLENSAK 3M 2520AV - Commercial service audio cassette recorder used with presentations. Has various inputs and outputs not found on home duty equipment. Decent condition. Have gotten around to trying it. $40 if sold separately.

5. WEBCOR COMPACT DELUXE EP2402-1. Needs repair or for parts. Case Top missing

$125 for the lot. Will sell individually for $25 each. The Wollensak 3M 2520AV is $40 if sold separately.

Will take military type or Hickok type tube tester as swap for above. Shipping & handling extra.

1857. Re: Calling CQ CQ CQ CQ CQ CQ seemingly forever

Newsgroup: rec.radio.amateur.misc
Date: 1997-11-01 00:00:00 UTC
From: bohnovic@worldnet.att.net
Message-ID: <63e3n1$gkk@bgtnsc03.worldnet.att.net>
Source record: 187758

Roger, my 3x2x3 was meant to be the maximum number of CQs/callsign. In practice I actually may send 3x2 or even a 3x1 (3 CQs and 2 or 1 callsigns.) Since I operate QSK I can hear what is happening on the frequency. If a station hits his/her key on the frequency I will stop sending the above and quickly send a K so that the station will call me. Sometimes this works and sometimes it doesn't. I guess it depends on the skills of the other operator.

I suggested the 3x2x3 because I remember reading about this method of calling CQ in an old QST (or was it in an ARRL Handbook?). The article suggested that this be the maximum number.

Like a lot of other people I am turned off by the station that sends a large number of CQs, then his/her callsign, and then repeats this all over again. Hopefully they will learn that this is not a very productive way of establishing a QSO.

BTW, unless a stations sends something like CQ CQ de K4WJ QSK there is no way I can tell they are using QSK. If I hit my key and they stop sending, well this is a clue to me that they are using QSK. But, you never know, it may have been just a coincidence that they stopped sending when I hit my key.

I'm afraid there's yet another:

HOMER: Let's check out everywhere a sick solitary misfit
might run to.

LISA: I'll start with Radio Shack.

The Simpsons Halloween Special VIII (?), Fox, 10/26/97.

I agree that most hams are pretty well balanced . . ..

An academic and/or technological person doesn't necessarily seem "kind
of weird." But I've met an awful lot of us who assert they don't care
how they look or what others think of them. (In nearly every case
these folks do care, they just don't know what to do about it.)

If these folks would do a little non-radio volunteer work they'd meet,
and be accepted by non-academic/technological people. It would be good
for both groups - and our hobby.

The ONLY reason that amateur radio *is* a dinosaur today is that its participants have made conscious decisions to be backward-looking Luddites. This is a dramatic change from the days before "Incentive (to copy faster and faster Morse code) Licensing," when hams were at the forefront of technology and invention.

There is NO reason that ham radio could not again be at the forefront of new technology and wireless communications techniques, except the insistence of so many of the incumbents and the ARRL/FISTS/etc. to cling to the past and resist progress, rather than look to the future and embrace change and modernization.

Unless we can turn that tide, the dinosaur *IS* doomed to extinction, but if it can learn to adapt to the changing environment in which it lives, it can, to borrow a phrase from the ever-logical Spock character, "Live long and prosper."

Thanks to the Northern Ohio Amateur Radio Society, Northern Ohio DX Association, Ohio/Penn PacketCluster Network, KH2D, KF2TI, WB2RAJ/WB2YQH & The 59(9) DXReport, N5XG, K8RF, K8XP, AP2TJ, BD1QL, DJ5AV & DX News Letter, DL8OBC, G4BUE & DX News Sheet, ON6TT/5X1T, OX3FV, OZ8AE, and VK4AAR for the following DX information.

5A, LIBYA. Felix, DL8OBC, reports that the status of the Rhein Ruhr DX Association's upcoming operation from Libya is going to take place as planned. Thanks to the support of the Libyan ASSAKER Club. The team will leave Germany on November 21st, and expects to be on the air from Libya a few days later. Their callsign will most probably be 5A7A, although this has not yet been officially confirmed. Outside of the CQ World Wide DX Contest, they will use two stations on all HF bands (including WARC and top band) in CW, SSB, and RTTY. They will join the contest as an Multi/Single entry to give the 5A and Zone 34 multipliers. A mailing list has been set up. While they are on the air, you will receive information about their progress and will also be able to send them information and comments. To subscribe, send a message to "majordomo@qth.net" with only the words "subscribe libya" in the message. ALso, there will be an online log search available. Check out their WEB page at: http://www.afthd.tu-darmstadt.de/5a1a/

9Q, EASTERN DEMOCRATIC REPUBLIC OF CONGO (ex-Zaire). Peter, ON6TT/5X1T, and Mats, SM7PKK/5X1Z, will be in Kisangani, from November 3-7th. They will have some ham equipment with them and expect to be active in their evenings hours. Peters states their antennas are very low performance, but USA and EU should have no problem working them. Peter will be taking his SSTV equipment with him and will do some SSTV. Peter has asked, "Where are all the SSTV DXers?" He has indicated that he has worked about 50 stations from 5X and most of them did not really know where 5X was, and clearly were just as interested in a picture exchange. Peter states, "Where is the bulk of you SSTV DX chasers? Sometimes I call CQ SSTV for 30 minutes (both voice and video) but no reply. So I asked myself, should

I bother? Motivate me!" Lastly, Peter might be in Kinshasa the week after the 9Q operation, and he is trying for the Vatican the week after that.

BZ, CHINA (China on EME!). It has been reported that the station BY1QH in Beijing has confirmed three 2-meter QSOs on EME on Saturday, October 18th, and on Sunday, October 19th. The Tsinghua University Amateur Radio Club station ran 200 watts into a 4x9-element Yagi antenna. In the first EME experiment, David, BZ1BM, and Lars, SM0KAK, had hoped to work VE7BQH and W5UN from BY1QH, but failed. They did work into Europe and made QSOs with three SM stations. David and Lars also heard some DL, 9K and JA amateurs on EME, and are planning their second experiment shortly. If interested in working China on EME, please send your request via E-mail to David (the student president of BY1QH) at: bzibm@wg.chnmail.com

C6A, BERRY ISLANDS (BAHAMAS). Don, N5XG, will activate NA-054 as N5XG/C6A on November 22nd. His operation will be on 15/20/40 meters CW/SSB on the normal IOTA frequencies. He suggests to check 7015 kHz at 0300z. Also, check 14260 kHz at 1300 and 1900z and 14040 kHz at 1600 and 2200z. QSL via N5XG (ex K5BDX).

FO, FRENCH POLYNESIA. "The 59(9) DXReport" states Albert, FO5JR, will take his Christmas holiday on Rimatara Island (OC-050) and will be active on 40-10 meters including WARC bands, CW only.

KH2 QSL BUREAU. Jim, KH2D, KH2 QSL Bureau Manager, reports that the KH2 QSL Bureau in Guam is becoming a repository for a very large number of unclaimed QSL cards. A large majority of the cards received there are for 2x1 calls. The MAJORITY of extra class call signs issued for Guam are NOT issued to hams in Guam - they are issued to hams who were at one time in Guam and no longer are there, hams who came to Guam and operated for brief periods, and hams who have never been in Guam but obtained Guam callsigns via the vanity call program. Judging from the cards received at the Guam bureau, a number of hams worldwide would like to receive a card from a Guam station, but sending them via the bureau is not, in most cases, the way to accomplish obtaining a Guam QSL card. OPDX InterNet Subscribers will receive an additional bulletin containing Jim's press release (which is very long) and a list that will assist people in getting cards from Guam.

KH5K, KINGMAN REEF (Cancelled). Chuck, N4BQW, had to cancel his KH5/N4BQW operation because the Captain of the ship he was on stated they had run out of time and needed to get back to Christmas Island to catch the weekly plane out.

OX, GREENLAND. Kim, OX3FV, has been very active on 160 meters and the WARC bands on CW. Check 17 meters around 1830z, 20 meters around 1230 and 2215z, 30 meters around 1200z, 80 meters between 0415 and 0500z and 160 meters between 0345 and 0430z. Kim reports to OPDX that the correct QSL info is via bureau or direct to: Kim Andersen, Box 3, zip 3930 Groennedal, Greenland.
Meanwhile, Joergen, OZ8AE, reports to OPDX that he will be active as OX/OZ8AE from Groennedal in the southwestern part of Greenland from

November 3rd to December 1st. In the CQWW CW Contest, he will be operating as a Multi/Single with Kim, OX3FV, as OX3FV. Most of his operation will be on CW. QSL for OX/OZ8AE go to OZ8AE direct or via bureau. The contest QSOs for OX3FV go to OX3FV.

PAKISTAN PIRATE CONTINUES. Tariq, AP2TJ, reports, "It has been confirmed by Bob/AP2JZB that he has never worked CW and has no intentions of the same either. Stations working 'AP2JZB' on CW are advised not to bother logging or QSLing, you will only be wasting your time and money as the QSL address/manager will also in all likelihood be a fake to get your IRCs or green stamps."

QSL INFO AND NEWS.....
CHANGE OF ADDRESS. Ray, G3NOM/9M2OM, states on November 2nd he will be leaving Malaysia and returning to the UK. He is expecting another overseas assignment, but until further notice, please forward any mail to: Ray Gerrard, c/o 37 Godward Road, New Mills, High Peak, SK12 2BU, England UK

It is very important to note that VI0ANARE and VK0ANARE have two totally separate QSL routes. These two separate operations with similar callsigns were celebrating the 50th anniversary of the A.N.A.R.E..
The VI0 callsign was used from July 1st through October 25th. QSLs for VI0ANARE go via VK4AAR (direct):
A. Roocroft,
Post Office,
Dalveen QLD 4374
Australia

The VK0 callsign which was used on Macquarie Island was active between October 26-31st. QSLs for VK0ANARE go via VK1AUS (the same for VK0TS):
Simon Trotter
POB 2063
Kambah Village ACT 2902
Australia

SPECIAL EVENT SPECIAL. The club radio station, 4U1ITU, located at the ITU Headquarters in Geneva, will operate as 4U1WRC until November 21st. The special callsign is in celebration of the 1997 World Radio Conference (WRC-97). This station will still count for ITU HQ for DXCC. For more information check out their WEB page at: http://www.itu.int/radioclub QSL via bureau or direct.

SV, GREECE. The "DX News Sheet" reports that Charles, ex-S92SS, and his XYL Leslie, ex-S92YL, will be active for the next four years as SV0LM and SV0LN from northern Greece near Thessos Island.

TZ, MALI. If you missed Baldur, DJ6SI, as TZ6SI (QRT on October 29th), you can still work Larry, TZ6VV, who will be active for about the next 6 weeks (maybe longer) before he goes to the U.S. Larry has been heard on 21226 and 21447 kHz between 1600 and 1830z. Also, check 28424 kHz around 1515z. QSL via AA0GL.

VK9L, LORD HOWE ISALND (Update). Dan, K8RF, provided OPDX with the following VK9LX Lord Howe Island DXpedition (November 23rd to December 1st) update. Everything is reportedly on schedule for Nick, VK2ICV/VK9LX, and Dan's, K8RF, operation slated for the last week of November. They will be operating as a Multi/Single in the CQ WW CW Contest and will run two stations before the contest as much as possible. Their equipment consists of: TS-930, TS-850, MLA2500, Laptops. They will make special efforts to be on 160, 80 and 40 meters before the contest. They have a good Antenna Tuner to help get them on the WARC bands. Nick has already pre-shipped all of their antennas to Lord Howe Island. This package includes the "Battlecreek Special" on loan from W8UVZ and friends, a Triband Beam (TNX VK4FW), MLA2500 Amp, 20 Meterlong Vertical, 2" Masting for beam, Coax, Antenna Tuner, etc. They have been provided with a Laptop computer and software courtesy of DEBCO electronics. Dan would also like to thank VE7BS; NM7M and XYL; W2UE/7 and others for their financial contributions. ANY help no matter how modest is appreciated, they heed help NOW before they leave, if possible. For details, contact Dan at: k8rf@fuse.net.

ZD9, TRISTAN DA CUNHA. Ian, ZD9IL, is active most days. He has been spotted on 12 meters on 24955 kHz starting around 1345z. He has also been heard on 10 meters this past week on 28490 kHz around 1445 kHz. Information from the "DX News Letter" mentions he uses a dipole and his QSL Manager is Edwin, ZS5BBO. Edwin hopes that they can find a sponsor for a new beam for Ian. Please be patient for QSL, Edwin gets the paper logs by ship three to four times a year. QSL via ZS5BBO: Edwin Musto, Box 211032, Bluff, 4036, South Africa.

ZK1XXP NORTH COOK OPERATION SUMMARY. The Dateline DX Association completed its DXpedition to Penrhyn Atoll, North Cook on September 27th. The total on-air time was 5 1/2 days with 2 stations produced 15,299 QSO's. OPDX InterNet Subscribers will receive an additional bulletin containing the statistics (provide by Tom, K8XP) of the operation.

-=-
IMPORTANT NOTICE! Users of the online BARF-80 BBS (Home of the OPDX Bulletin) take note, the area code has changed as of August 16th. The new 440 area code will replace the 216 area code. Currently both area codes can be used, but the 216 area code will be permanently replaced in April, 1998. BARF-80 BBS online at 440-237-8208 28.8k-1200 Baud 8/N/1

Hello Friends and Neighbors:

Is there anyone out there who is sick and tired of all this CW crap all the time?

Some of it is even spilling over to unrelated newsgroups. It is ridiculous.

If you want a "higher" class license, then meet the requirements and it will be issued.

If you do not wish to take the time to study, practice, etc to enable you to meet the requirements, then, please, just go (quietly) away.

I hate CW. But, I wanted an extra class license. Thus, I toughed it out, spent the time and effort and passed the test. Not by much, but I passed back in the "good old days" with an FCC examiner. If I can do it, as much as I hate CW, then so can all of these "Morse code is obsolete", "HF is codeless in other countries", wannabees. This ain't Japan and it ain't Fiji or anything but the USA. We got rules here regarding CW and HF priviledges. If you like the rules elsewhere . . . . .

So, please, spend your time learning, practicing and passing OR go (quietly) away. And quit wasting all this space bitching about a license requirement that you are unwilling to master. The Morse code ain't dead yet. However, the horse you have been beating died over a month ago. Eat it or bury it, but whatever you do, please just get it the heck outta here.

73,

Bill

I wouldn't abstract it even that far -- the internet is the medium and
still a lot of the message. The internet has the "sex" appeal right now
because it is relatively new, hasn't found its purpose, or function so it
is a frontier. RF is not the frontier anymore, hardware is not viewed as
the frontier, software is the frontier.

>Against this background, the decline in numbers in amateur radio

>3 to 10 times present levels?

No, its not. There are numerous other statistical factors which, due
to the nature of Japanese society, would have to be factored out. One,
for instance, is the obsession that many members of Japanese society have
with high-tech gadgets. Another is the role of family, and successive
generations of "hams" within Japanese society.

Japan does offer a codeless HF license. However, it is very similar in
scope to the US's own CB radio license. For a more realistic comparison,
you'd have to include the number of US CB radio operators for a more
meaningful number.

Also, ask yourself this question: if you get on the radio, who are you
more likely to hear: a US station, or a JA station?

The answer is, of course, a US station.

>*doubling* of the worldwide ham population

Double nothing is still nothing, in the total realm of things.

I like CW and I use CW a lot in 2m + 6m. I just don't understand
why CW must be the requirement for HF operations. It doesn't make
any senses.

AT the risk of going too far off topic,

How about specific access licenses:

a 5 or more wpm test for access to "CW only" bands
a digital exam for access to "digital" modes and spectrum.
etc?

My Amateur Radio Station

My amateur radio station is located in the university residence, the complex where all residences are the students...

Some students ask me about my station, "hey, it's cool. may I see it ?"

I say, "sure."

they say, "oh cool !! so you can transmit music ?? I wanna hear something in my room !!"

I say, "no, you can't....."

they get disappointed.

they say, "so you can contact anyone anywhere in the world ?"

I say, "no I can't. you have to know morse code to use shortwaves."

they get disappointed.

---

now... how would you suggest the people to involve in the amateur radio ??

Lessee... We have 5 theory exams, and 3 code tests.

Seems to me that our license hierarchy is predominently based on your ability
to pass theory examinations -- getting an "Extra" class license requires you
to take and pass five different theory examinations, but it only requires you
to pass a single 20wpm code test.

>This is because youngsters are smart enough and have been exposed to enough
>high technology such as computers, the internet, cellphones, satellite TV,

>rather than their betters, in a technical qualifications sense.

Right. See, they can't stand being put into a position where they think
they are "second class". BUT, put them into a situation where THEY are
the ruling class, and everyone else is a second class citizen... Oh, well,
now THAT's different. Hypocrites, plain and simple.

> With the new no-code tech
>class here in the US, the tide has turned and soon those who would modernize
>will be a strong majority.

What evidence is there to show that the "new no-code tech class" is modernizing
in any way?

Your statement is utter hogwash.

There is tremendous evidence to show that the majority of codeless techs
get on a 2 meter or 440mhz repeater and do nothing else.

You yourself stated that "many" engineers refuse to get a codeless tech
license.

The codeless tech license has existed for half a decade in the United States. Please enumerate the technical innovations which exist in the hobby today which are directly attributable to a codeless tech licensee, and WOULD NOT exist today if not FOR a codeless tech.

There are NONE.

There is NO MODERNIZATION occuring in the codeless tech license class.

They are merely USERS of the same technology as every other class.

Your Anti-Morse propaganda is once again shown to be complete, utter fabrication.

The Japanese also realize the value of modern technology ... they are
simply more accepting of progress than many other cultures today. Their
entire economy and "work ethic" is designed around "finding better ways"
and "working smarter". Here in the US at least, there is a large body of
hams who seem to think that it is necessary to make someone "work hard to
earn their license" ... even if that person is a PhD in EE with 20-30 years
of experience (like Cecil's friend at Intel) who may well have forgotten more
about radio over lunch than many hams ever learn ...

[speculation on how much growth might reasonably be expected to occur,
were the code requirement removed world-wide trimmed to save space]

> Naturally, if all that happened were the removal of the code
> requirement, there would be utter chaos on the HF bands (particularly as
> we approach sunspot maximum).

Why? Simply because of greater numbers? I think not. Even at the
peaks of the solar cycle, our bands are grossly underutilized by any

reasonable standard.

> We would obviously still need a means of regulating access to these bands,
> and I suggest that a one-year probationary period restricting operation to,
> say, 160/80/10m for new licensees would be a step in the right direction.

Aren't the technical (theory) parts of the tests and the rules/regulations parts supposed to "regulate access to the bands" ??? What more regulation should there be??? Why is there so much emphasis on keeping people from participating? (and please don't give me the "specter of CB" argument ... those who misbehave there don't give a damn about licensing or anything else ... if they want to use our bands, the lack of a license will not stop them, they'll do it anyway.)

Help: What Transceiver Should I Buy?

I am looking to buy an inexpensive (or well-priced) hand-held transceiver with the following features:

- Twin Band 2M/70cm
- Code Squelch
- CTCSS
- DTMF recognition

Optional:
- Cross-band operation
- Twin-band scanning

The key is being able to extend the RX/TX to the following ranges (I don't expect it to come like this, but would like to have the ability of using a mod):

- 140-174 mhz TX and RX
- 440-475 mhz TX and RX
- 800-900 mhz RX only

If you have such a unit that works like this, please refer it to me, or if you like, I would be willing to buy it from you.

jsteven@sirris.com

Thanks!

> at the ARRL ...

As you probably know already Carl, it is a catch-22. Gifted technical
hams
are usually loners and would lots rather experiment in private than "get
all
together as a political force". The politically motivated Luddites will
win -
they always have - reference our Great Republic's slide into socialist
facism.
The something-for-nothing folk, i.e. "Morse code skill is as important
as
electronic knowledge", seem to be everywhere - we technical savvy
producer
types don't stand a chance except to go on strike ala "Atlas Shrugged".
Unfortunately, there would be no ham radio left after we came back from
our strike as the other Luddites would have gobbled up our frequencies.

Hi Michael, no one wants to replace the existing amateur radio operators.
But explain to us in rational terms, how engineers, experimenting and
making one short test transmission a week, is going to hurt ham radio.

Your best bet is to replace the microprocessor with a cpu called
ChipSwitch. These can be obtained for about $55.00. In additon to
extended frequencies, it also provides the radio with neat features like
memories, repeater offsets and being able to change the "span" with the
two microphone buttons. I believe that Bill's 2way radio in Morgan Hill,
CA carries them. Check out his web site. I forget it off hand, but a
search on yahoo will locate it easily for you.

If your planning on USING CW, then fine. But why should people who want to use VOICE on the HF bands (it is allowed, you know) have to learn CW?! Does this make sense to you?!

It takes time, determination, and real comittment to be a brain surgeon too... so lets make EVERYONE learn how to become a brain surgeon, and call all those who don't become one, LAZY!!!

Note: EXISTING brain surgeons would not see a problem with this, but those who are not, would. Think about WHY that would be, before you continue your argument.

By this logic, all people who speak english but do not speak russian or
japanese, are LAZY. I prefer to not think of them as LAZY, but
EFFICIENT for not wasting time and energy on a language they are not
going to use! If someone wants to learn another language because they
may want to visit another country, then it would be useful to learn.
But it would be silly to FORCE english speaking people to learn russian,
so that they could take a trip to California.

What does that have to do with planing to do something bad?! Does that mean that all people with unlisted phone numbers are planing to do something bad? That all people who don't give their phone numbers or addresses to radio shack salespeople are satan's helpers?

Yes I suppose that radio shack sales person could follow you home, (of course someone COULD get this information, why volunteer it?) if that answers your irrelevant last question.

I wouldn't be opossed to the dropping of the morse requirement here in
the US but despite all the urinary no/pro-code wars I think the
internet will be one of the "asteroids" along with such things as
Motorola's project Iridium, and Billy Gate's Teledesic etc. that kills
off the amateur radio "dinosaur." *Hopefully* I'll be wrong :)

The UK population is pretty static, why should the number of licence
holders be rising? Are private pilot's licences, to choose another
hobby where study and certification are required, rising faster?

Yes, I'm sure you're right that the interest in VHF has declined. It
happens as the less committed are attracted by computers or other
interests. The Class B licence was created, and its holders were
given access to VHF and above, in an attempt to colonise the empty
allocations. It simply hasn't worked in the long term. Why anyone
thinks that this is a reason that Class B holders should now be
awarded HF access is a mystery to me.

Maybe radio amateurs need to invent ever more stupid modes with wider
bandwidths in order to defend our indefensibly large spectrum
allocations. FM, repeaters, satellites and packet were certainly a
good start. But surely we are clever enough to do better than that :-)

In my case I have to agree, (mostly,) about 4 years ago while in the
midst of being *QUITE* active in HF Packet/Amtor/Pactor/G-Tor, SSB,
SSTV, CW and an occasional chat on 2 meter FM I installed one of those
pesky AOL disks that came in a magazine. After a time or two of
chatting and downloading programs and viewing .jpg's/.gif's and a .avi
or two looking at 300 baud HF and ansi graphics didn't quite get it
anymore. I could kind of see the writing on the wall and somewhat
quickly peddled all of my expensive gear ("while the gettin was
good.") My only retreat was the purchase of a Radio Shack SW receiver
because I missed being able to copy some of the old timers on 40 CW ;)

>SSB also...

Not always. SSB faces greater degradation against some forms of channel impairment than does CW. But that's very faint praise for CW because there are much better methods you can use than either CW or SSB. Going down that road leads to arguments about what is "good enough". In conditions where SSB is "good enough", concerns about other methods become moot. And in truly extreme conditions, neither SSB nor CW can hack it, but we have other methods which can.

To put it in piloting terms, if you want true all weather capability, you won't depend or either SSB or CW. Neither can really hack it when the soup is really thick. But there are digital techniques which can.

It's an interesting concept that the number of amateur licences per
million population should remain constant, but certainly not one that is
supported by any sort of historical analysis.

I was replying to a comment about an increase in number of amateurs
worldwide and trying to relate that to the more interesting question as
to what is happening in the UK. I expect it will become more interesting
if the number of amateurs in the UK is found to be decreasing.

> be the Operatorand having all the Fun.

I suppose that might be true if your only fun was derived from the *mechanics*
of manually transferring alphanumeric characters. But if you would actually like
to *communicate* with the operator on the other end, you'd find that the digital
techniques we talk about will perform much better than OOK Morse.

And the *mechanics* of encoding and decoding text are basically irrelevant to
those who derive their fun from experimentation with antennas, radios, and other
equipment involved in radio communications. Those are still present regardless
of how the mechanics of text transmission are performed.

And of course there is the fun to be derived from refining and improving the
techniques of text transmisson themselves. Experimenting with different modem
designs, different signal forms, and different codings is very intriguing in its
own right.

But for those whose only sense of enjoyment comes from the mechanical
manipulation of a switch, I suppose there is nothing of value to them which
they might obtain with better methods of communications. It seems an activity
with very limited scope, however.

In the 1920s radio was an inspiring, magical thing that captured the
imagination of a generation. It was such a big thing that constructional
articles for broadcast receivers even appeared in daily newspapers,
including the Daily Express.

In the 1960s, broadcast radio and television were taken for granted.
A "transmitter" was still moderately exciting and sexy, as was the
idea of talking all round the world from your garden shed.

In the 1990s, it is applications and information content that
interest people now, not hardware or the straightforward business
of getting information from A to B.

Against this background, the decline in numbers in amateur radio
is inevitable. The only sensible thing to do is to accept it and
learn to live with it. Let amateur radio return to its roots, and
become once again a home for those who are interested in how
radio works.

1917. FS: Browning Golden Eagle Mark III

Newsgroup: rec.radio.amateur.misc
Date: 1997-11-02 00:00:00 UTC
From: vintel@aol.com
Message-ID: <19971102160601.LAA29846@ladder02.news.aol.com>
Source record: 187642

Browning Golden Eagle Mark III three pieces sold as a
set $600.00. Overall appearance is very good to
excellent & it was working
when removed from service. There are no books or
microphone with it. Each piece has a metal case w/
faux wood grain covering. Front panel &
markings on all three units are excellent. The only
observed problems with these units are as follows:
Receiver has a few light rust spots on the
transformers & chs. Transmitter has few light rust
spots on the transformer. SSB15 Transmitter has 1
spot of chs rust & there is a good deal of flaking of the
faux wood grain case covering on top.
Price + S&H from Baltimore, Md. Will consider reasonable offers. International
shipping
available. Contact vintel@aol.com to order.

Also
10 ea 1X2C & 10 ea 3A3(3A3B, 3A3/3AW3, 3A3C). NIB TUBES. Price $1.50 ea +
shipping from Baltimore, Md.
20 Electrolytic capacators, paper cover, under chassis mount w/ mounting strap,
multi-
section, 150V. The type that was used in a lot of "All American 5" radios. All
are unused.
General Inst, Aerovox, Planet, etc. 80 & 50 mfd, 50 & 30, 40, 20 & 20.
$17.00 + $4.00 shipping in contenintal US.

You're not confused. You're right. Its just a red herring that no-coders
use to create this illusion that our bands will be "saved" from all these
new no-code-HFers, when, in fact, all they're really going to end up doing
is crowding the SSB portions of HF.

>beyond the Midlands, is full of French, German, Dutch and Belgian stations.
>The closest that the Internet can match that, I suppose, is discovering
>that there is no spam when collecting your e-mail!

DX is obsolete. Get on Internet Phone and chat interactively with people
around the world.

>2. The challenge of working QRP (either station) when conditions are fairly
>flat.

I can't speak about our English neighbors across the pond, but here in the
States people don't want a challenge. Remember that comment the Japanese PM
made about Americans -- American workers are lazy? The growing problem with
the welfare-state mentality in our country is yielding a generation of
people who believe everything should be handed to them. They don't want
"challenge". Naturally, CW is a challenge, so that has to be eliminated
as well.

>3. Improving your station, particularly with home brew and construction.

Americans are not interested in home brew. Instant gratification. Pick
up the phone and use plastic to order a complete station.

>4. Chatting with friends who are, without exception, polite and truly
>friendly.

It *IS* possible to do the same thing over the 'net.

>5. Amateur radio offers a huge range of different aspects, each with its
>own set of skills and rewards. By comparison the Internet is facile and

>uniform, and in many cases as non-participatory as

Totally incorrect. Internet Phone and CUSeeMe offer large degrees of
interaction.

>6. Carrying out your own investigations, such as propagation studies.

Requires too much work.

There are some very interesting figures here. To summarise them in a
table (all figures very approximate):

```
=====================================================================
Country Population Hams Hams/Population Morse Test
Requirement
=====================================================================

USA 252 M 700 K 2.8% Yes
UK 58 62 1.0 Yes
Germany 80 72 0.9 Yes
Canada 27 45 1.7 Yes
Spain 39 59 1.5 Yes
Thailand 58 141 2.4 ?
Indonesia 187 28 0.1 ?
Japan 124 1294 10.4 No
```

In other words, for most of these countries, the ham population is
between about 1-3%.

For Japan, however, it is a massive 10%. Japan differs from the other
nations in not requiring a code test.

From these figures (I hesitate to call them statistics), is it not
reasonable to infer that if the whole world removed the need for a code
test, the ham population could increase by a factor of anywhere between
3 to 10 times present levels?

These factors may of course be on the high side, taking into account
competition from the Internet and other distractions. However, even if
the total abolition of the code requirement resulted in only a
doubling of the worldwide ham population, this would still be a
tremendous boost to numbers, and would make it much more attractive for

equipment vendors to address this market.

Naturally, if all that happened were the removal of the code requirement, there would be utter chaos on the HF bands (particularly as we approach sunspot maximum). We would obviously still need a means of regulating access to these bands, and I suggest that a one-year probationary period restricting operation to, say, 160/80/10m for new licensees would be a step in the right direction.

Because amateur radio is interesting and we're doing a good job of
recruiting new hams???

That the number of license holders isn't rising (by much) should be
a reason for concern in the UK, I would think ...

> Yes, I'm sure you're right that the interest in VHF has declined. It

> thinks that this is a reason that Class B holders should now be
> awarded HF access is a mystery to me.

This sounds very much like the arguments procoders use against our
no-code technician class here in the US ... the fact of the matter is
that relatively few people are willing to be "second-class citizens" due to
some arbitrary and ridiculous "requirement" like Morse ... this seems
particularly true in the case of many of the more intelligent and educated
technical professionals that ham radio would benefit greatly by attracting.
Recognizing (finally) that Morse is not some god to be worshiped and that
the technical knowledge/skills are all that should be required for HF operation
would remove that stigma and cause more to participate and contribute.

> Maybe radio amateurs need to invent ever more stupid modes with wider
> bandwidths in order to defend our indefensibly large spectrum
> allocations. FM, repeaters, satellites and packet were certainly a
> good start. But surely we are clever enough to do better than that :-)

WRONG! We need to be using more efficient modes and packing in more people
(without creating extra interference and bedlam, of course, but that is

entirely possible with better modulation/coding/protocols), otherwise, our commercial services neighbors will be quite justified (and successful) in making the argument that they can make FAR better use of our spectrum than do we and the public interest would be served by giving them our bands. (I hope the "smiley" meant that you made the suggestion in jest ... the big problem is that we have so many technically ignorant and incompetent hams these days that many would take it seriously.)

Richard ... I agree with most of your analysis and sentiments ... but I
don't agree that the inevitable outcome has to be the decline of ham radio.
If we can take ham radio back from the gamers who don't give a crap about
how radio works, but simply want to use it as a playing field, we can make
our "product" appealing to the hundreds of thousands (millions) of young
people that will become the engineers, computer scientists, programmers,
and technicians of the future.

THAT should be our focus, NOT maintaining the status quo for the nostalgia
benefit of cranky olde fartz who long for the days when a transmitter was
1 or 2 tubes and Morse was the only way to communicate. Those days are gone
and ham radio has focused entirely too much on preserving them, to the
detriment of the service as a whole and its prospects for future survival.
We HAVE to change our entire world view to something that is modern,

progressive,
and attractive to the new generation, or the entirety of ham radio will "dry up and blow away" in the next couple of decades.

There are several countries that allow you to operate HFs without any
codes.

Japan

No code : Under 10 MHz + Above 20 MHz (10W), Above 30 MHz (20W)
5 wpm : Under 10 MHz + Above 20 MHz (50W)
9 wpm : Full access 200W
12 wpm : Full access 1000W

Fiji

No code : Full access 150 W

# of hams in Japan are increasing(and 50% of hams stay there...)

many seek for "world wide communication" and it is possible to get it
in Japan quite easily...

don't say no-CW HFers will not be polite. most of HF users in Japan
are no coders and I am getting good responses about how JA stations
are operating.

>worldwide and trying to relate that to the more interesting question as
>to what is happening in the UK. I expect it will become more interesting
>if the number of amateurs in the UK is found to be decreasing.

Merely looking at the numbers of current licences held can be
misleading. The key issue is the amount of activity. I believe the
amount of activity on the ham bands has *significantly* dropped in the
last 5 years. There are many UK licencees who continue to pay their
licence fee (to keep their cherished callsign) but have ceased to be
active on the bands.

The situation could be even more misleading in the USA where licences
are issued for 10 years duration and there is no renewal fee. There one
might as well hang on to the licence as there is no cost to do so.

I no longer own any HF equipment and my ham activity is limited to
packet and phone through the local repeaters. With the increased
regulation of packet by the DCC, I expect to give up packet operation in
the next 6 months. The Internet and messing about with mobile phones
seems to have replaced my interest in radio.

Walt may continue to ignore the situation. However, at the next sunspot
cycle peak, he will notice that the HF bands are not as congested as
previously. That, combined with the latest developments in HF rigs,
should mean that he should enjoy himself!

What is the point in experimentation if no one uses the technology?????
BTW, Amateur radio isn't here to advance your commercial interests, in
case you weren't aware that this is a non-commercial service.

As for who is a better class, looks who's calling the kettle black. I
sure hope you people don't use the language that I've seen in your prior
posts on the air.

What a couple of jerks. I don't know why I bother replying to your post.
I think I'll ignore you two bozos from now on. I'm wasting my time
anyway since it's obvious that you have your minds "made up" and that
you give the appearance that you know-all/see-all (yeah, right).

Uhm, the algorithms for FIR digital filters are so simple that I could take a 12 year old with basic programming skills and teach them how to implement a FIR filter in DSP code in an afternoon. I could not teach that same child the More code and establish any proficiency in that same afternoon. IIR filters are only slightly more complicated to implement.

Everyone who is not so blinded by Morse dogma as to buy into the
"Morse is the measure of a Real Ham" garbage ...

> If you are so
> completely incapable of copying code due to an infirmity (I seriously
> doubt most such claims... just laziness IMHO... I know blind AND deaf
> (both) persons who copy code well...) they can get a physician waiver.

And what about those who are more interested in radio and how it works
and making things that work better? Why should they be banned because
they don't share the same quasi-religious worship of the false god Morse?
These are the folks with the technical curiosity, interest, and capability.
They are more valuable to the future of ham radio than hordes of gamers
who want to keep ham radio stuck in the past forever, know little or nothing
about how their radios actually work, couldn't fix a radio if their life
depended on it, and simply want to play competitive games that happen to
use the radio medium as the playing field.

> > Jesus, I'm still waiting to hear one sound, reasoned, valid, practical,
> > intelligent reasons for the Morse requirement. Anyone?
>
> How about tradition?

Tradition is the last ditch excuse for maintaining the status quo when
all logical reasons have ceased to exist.

> How about the fact that compared to voice CW makes
> international communications between hams who cannot speak eachother's
> language much more meaningful?

The amount of content that can be exchanged between operators who share
no common natural language is VERY limited. Morse has NO advantage over
more efficient digital modes in this respect ... one can type all of the
Q-signals, SOS, etc. just as well as by beeping, and modern digital modes
are more robust, so the message is more likely to get through.

> Remember that bit about International Goodwill and all?

Yes, I am firmly convinced that a bunch of "Ugly Americans" screaming "CQ Contest" and stomping all over anybody and everybody or using typical brute-force "pileup-busting" techniques in quest of a new DX contact does WONDERS for international goodwill ... (this entire paragraph is sarcasm)

> You can across the bands and hear someone calling for help in Portuguese
> or Swahili... will you know what is going on? Now, you come across
> SOS... do you have more of a clue as to what is happening? I think if
> you are intellectually honest and can admit the truth to yourself you
> will see my point.

If you are intellectually honest and can admit the truth to yourself you will see that you still don't know how to figure out most of what the hell is going on, due to the very limited amounts of information that can be conveyed by Q-signals and the like.

You still don't know shit about what "unga munga boola dawade" means in Swahili, do you? Is it "Need blankets, kids freezing at night." or "We have diphtheria outbreak, send vaccine." or is it "Yankee go home, we don't want your obnoxious ass here." ???

(for any readers who actually speak Swahili, I meant no offense by making up the
"unga munga boola dawade" phrase, I was just trying to make the point that Morse is not, despite popular mythology, analogous to the "universal translator"
of Star Trek fame ...)

> Is CW the most efficient mode to ever be developed? No. Should we
> limit ham band usage to ONLY the MOST efficient mode devised? Of course
> not!

Agreed, but we should also not limit access to the bands on the basis or proficiency in, or worship of, any single mode ... especially one that dates to 1847.

> And if we just do digital in amateur radio then from the user point of
> view it is no different than the internet... just slower... what use is
> that?

It doesn't HAVE to be slower ... and the content can be far beyond what is currently available via packet. That amateur packet is still limping along (predominantly) at 1200 bps using the kludge of "TNCs and AFSK over voice-grade FM radios speaks VERY BADLY for the ham community as a whole for being lazy, backward, and refusing to keep up with the times.

> Do we want hams, or appliance users? Just curious.

I think we want hams (who are more interested in radio, experimenting, and learning). Unfortunately, what we HAVE are predominantly appliance-operating gamers who have few clues about the internal workings of their appliances.

Code on 160m runs from 1800 to 2000 kHz. As long as the digital folks continue creeping closer and closer to the lower band edge, you'll discover more and more code scattered around what was traditionally the phone segment.

WEll I have to agree, BUT until it changes, there is no way to get
past the Tech license.

I complained and hated CW until one day I realized that I was gonna
die a Tech unless I started working on it.

It took me about 60 days to go from 0 to 13 WPM, and passed the
Advanced theory the same day.

Then I realized that I had been listening to the characters at 18 WPM,
slowed down to 13 WPM, and decided that I'd give the Extra a shot.
Thirty days later, I got my Extra.

I found I only hated CW cause I couldn't DO it!!
I finally found it to be actually fun.
Many people I know couldn;t believe I had worked that hard to get the
Extra, but I knew if I was ever going to get it that I had better
strike while the poker was hot!!

I believe almost anyone can do it, it just takes time, and
determination, and a real committment!!

Good luck!!n Fri, 31 Oct 1997 01:49:02 -0600, "Dr. Bellows"

Snip
No of course it isn't reasonable. What you are saying is that (to
double the UK population of amateurs) there are 62000 people out there
who have decided not to take the RAE because they would also need a
morse test to gain access to HF. I think that the technical requirement
of the licence has a large part to play in the JA numbers.

No offense, but other than needing an assist to get the patch up and down, that describes about 99% of all the autopatch traffic I've ever heard. Since you absolutely can't use the autopatch to order pizza or make business deals or whatever, what's left but to call the wife?

It could have been worse. He could have got his wife licensed and bought her an HT and you could have been forced to listen to them for 30-45 minutes while they say on the radio what they should be saying in the living room. No wait, that IS what we hear on the repeaters nowadays...

Well, I was hoping that as a result of this discussion someone would
give the figures for the UK for the past few years, so presumably you
can do this?

I tend to agree with Trevor - those Japanese license never
expire until death, either, from what I've been told. I've
also been told that a single individual can hold many
callsigns, which is the same as in Canada.

In the US, there is NO code requirement for VHF access, and the
number of licensees has indeed increased in the past five years.

How much, incrementally, due to dropping the code vs. not having done it??? It'd be interesting to see, but I'm not going to waste any would-be on-air time on that one.

P.S. I can't imagine a test/licensing scenario in which one in ten of ANY diversified population would have an interest in getting licensed.

I wonder how proactive the Japanese licensing authority, given "lifetime" licenses, is in purging the records of "SK" hams from the databases...hmmm...

Just so you know......DPL is only a "Digital Private Line" squelch control. It uses a continuous digital pulse instead of a sub-audible tone to control the audio squelch. It is NOT a audio encryption system. If you have the capability (i.e. a Motorola repeater with DPL) you can use it on the amateur band. You probably won't get any others using the machine unless they have a commercial type radio and have the proper digital code programmed for the repeater.

From: kenk@primenet.com
Message-ID: <63ksfs$rgh@nntp02.primenet.com>
Source record: 187521

I teach a community college course in electrical fundamentals. When I teach Ohm's law, I have them do labs measuring current and voltage in single-resistor, series, parallel, etc. circuits after I lecture on each type of circuit.

I've been using 2W resistors and clip leads but this makes a tangled mess when several resistors, the meter, power supply, etc. are connected. I'd like to rig up some sort of project board next semester to make the setups easier, using 2W resistors and short wire jumpers. I use 2W resistors because they are easier to handle and read, and are less likely to get fried. Most students just WON'T check power before turning on the power supply. Some NEVER listen to instructions. :(

It has to be cheap! And quick to build if that's necessary - my spare time is scarce. No budget so it'll come out of my pocket. I couldn't find anything simple at Radio Shack when I visited. Any suggestions?

Those little proto-boards with all the little holes won't take 2W resistor leads - too big - ruins the boards. If I have to I'll use them and 1/2W resistors, but I'd prefer not to.

(Continued from previous message)

And this from Chuck Scott, N8DNX...

"The "RC" function is configured to directly control radios such as
the TM-732. In fact, if you look at the layout of the microphone remote
commands for the 732 it very closely matches the key assignments for of
the "RC" mode. Since I have a TM-732 installed in my car, I had a chance
to try this out and it's VERY convenient. Everything from direct frequency
entry with the "F" key to enabling X-Band repeat. I'm really surprised
they aren't marketing this feature of the radio."

++
VII. Cross Band Repeat, from Chuck Scott, N8DNX
++

The TH-79 does go into X-Band repeat. Press the "F" key then the "MONI"
key to enter repeat mode. Use the same to return to normal. There is a
10 min transmit limit so it's not useable for long duration monitoring of
a continuous transmission. That's understandable in light of the number
of horror stories I've heard of people frying their HT's in repeat mode.

++

USA amateurs are allowed phone operation in all of 160m, there are no
de jure sub-bands, so any CW operation on 160m is technically spilling
over into the phone band ;-)

>>Any mods for a Kenwood TH-79A(D)?

Kenwood TH79 Dual Bander Modification and Feature Guide r1.5 9/13/94
==========
Clayton Wagar, KD4IDN
920 West Crawford Street #7
Dalton, GA 30720

Here is a compiled list of modifications and features I've found for the
Kenwood TH79 Dual Band HT.

Thanks to the following for their contributions to this document:
Mike Musick, N0QBF
Cole Cunningham, AA7RD
Duane Voth, KC5BGV
Chuck Scott, N8DNX

Having had many other radios in the past, and certain to have many in
the future, I understand the anticipation of Amateur Radio operators to
find modifications to their equipment. I started this document because I
want to see _quality_ information circulated as quickly as possible, in
order to save a lot of time and effort for others.

If you have any other comments, mods, or information you would like to see
included in this document in the future, please send them to:
Clayton Wagar KD4IDN
yensid1@aol.com

Outstanding questions at the time this document was released:

* Rumor of a keypad modification to the radio for "Wide band" TX, RX. If you
know of this mod, please write to me, even if you wish it not to be
published. This would save a number of poor radios from useless torture!

Hope you find all of this information useful. Again, please send corrections
or additions to yensid1@aol.com

73 de Clayton

++
I. Disclaimer
++

Well, don't you get sick of this stuff? I know, I know. However, I must say that I cannot and will not be responsible for anything that might happen to your radio, your person, your dog, or other operators you might talk to with your th79. In addition, if you decide that, with your newly modified HT, you just absolutely must cause unlawful interference with another ham or another radio service, I won't pay your NAL. Really.

Oh, and while we're at it... The extended RX/TX modifications may require you to solder or desolder really, really small components. If you want to know how small, look at the tip of an average ball point pen. Smaller than that. It takes about 1/2 of a second to wipe out several components as well as fry the board inside the 79. Please be careful.

++
II. TH79 Description and Impressions, by Mike Musick, N0QBF
++

Lulled by the sexy small size, I succumbed (or, rather, the credit card succumbed) and bought a Kenwood TH-79 dual-band H-T recently. Already owning a TH-78, the comparison comes easy.

SPECS. The TH-79A is a U.S.-spec dual-band transceiver, featuring coverage from 144-148 and 438-450 MHz. Receive coverage is extended on the 2M side from 118 to 174 MHz with AM in the aircraft band; there is no extended UHF coverage without modification. Max power is rated 5W on VHF and 3.5W on UHF with a 12V source; max power with stock 600 mAH nicad pack is 2.5/2.0. There are three power levels for each band - high, low, and extra-low (30mW). There are 80 memory channels, with no evident expansion capability. U.S./Canada version comes with the CTCSS encode/decode option. Going price at a 7/17/94 hamfest was $480.

GENERAL IMPRESSIONS. Tiny, tiny, tiny. Imagine putting a small duckie on the ARRL Repeater Directory - except that the 79 is narrower by about an inch. With the standard battery and not

Source record: 187525

(Continued from previous message)

"Regarding the lack of a memory Lock Out function, I talked at length with the Kenwood people. They have been inundated calls about this and have told me that they are preasuring Japan to come up with a processor replacement to fix this, perhaps as a retrofit. I encourage any owner of a TH-79 to write to Kenwood insisting on such a modification at no cost and asking that they be informed when it is available. I think this is justified for several reasons. First, I have been told by another ham that the official brochure indicates that such a feature is included. Second, and more important, it is arguable that the radio is not suited to the application without memory lockout. After all, it's an 80 channel radio. To make effective use of that many channels REQUIRES a channel lockout function. Without effective use of that many channels, the radio is not comparable to the current standard for such a unit.

BTW, close inspection of the RF deck in my radio shows no obvious missing parts. I didn't remove the board to check the other side, but my suspicion is that the 800 MHz parts are installed. I'd be interested in input from others on that. So far I've not discovered how to make it display any 800 MHz frequencies though."

==========
Kenwood TH79 Dual Bander Modification and Feature Guide r1.5 The End!
==========

1959. RE: MODS For TH-79A(D)

Newsgroup: rec.radio.amateur.misc
Date: 1997-11-03 00:00:00 UTC
From: clint.bradford@atdbbs.com
Message-ID: <97110308115520824@atdbbs.com>
Source record: 187526

(Continued from previous message)

Following is a modification for the Kenwood TH-79A Dual Band HT which opens it up to tuning from 67-174 MHz and 400-511 MHz. Actual receive was 85-135.995 AM and 136-179.995 FM with reasonable (0.5 microvolt or better) sensitivity at all the points I measured. Transmit was 136-179.995 and 400-511 with power dropping off at the ends but still usable (about 0.5w on the high scale at the band edges).

As usual, I take no responsibility for the mods, or your use of the unit after mod. Please exercise good judgement and don't endanger our ham bands with your irresponsible actions.

The observations noted are all I tried and I have no further data. This is such a delicate operation that one shot was all I wanted to do, and when it worked I quit!!!

WARNING-CAUTION-LOOKOUT-ETC!!!
The diodes to be moved are microscopic!! About 1mm long by 0.5mm wide. This mod should be done by professionals on a closed track only. Children, do not attempt this at home. Requires extremely small soldering tools and MUCH skill. I had a professional surface mount facility do mine...

1. Open the unit by removing three screws from the back and one under the DC power input cover. Carefully separate the front and back pieces. The two case halves may be disconnected by pulling the wired plug and by prying the brown latch on the ribbon cable connector up enough to release it.

2. On the front PC board in the lower right corner as viewed from the rear with the knobs pointing up there are seven spots for diodes in a row, with one diode missing.

```
|
o o o o x o o |
_______________|
2 3 4 5 6 7 8
```

The numbers are D302-D308, left to right, with D306 missing.

3. Remove D304, and D307. Put them away in a safe place (Just in case...)_

4. You should now have:

```
|
o o x o x x o |
_______________|
2 3 4 5 6 7 8
```

5. Reassemble and good Luck.

Enjoy, but don't create problems with the new capability...Wouldn't it be nice if Kenwood would make a RX only mod with these capabilities and we wouldn't have to worry about accidental transmissions where we shouldn't be transmitting. I, for one, don't want or need to TX, just RX...

73, Cole, AA7RD
August 11, 1994

(Note - This mod also adds 2 more menu settings. One of which is an AM/FM demod selector for the 300-400 Mhz band. To access this band, select the VHF band, press F, then press the Low/Hi key. Repeat to return to 144 Mhz. The AM/FM selector will allow you to listen to Military transmissions in the 300Mhz band in either AM or FM.
- Clayton)

++
V. Remote Base Operation with Kenwood 732/733
++

Kenwood has now simplified remote base operation of their mobile rigs with the TH79.

I will not give a step by step on how to control the mobile rigs, since they are different. Hoewever, to really understand this feature, I would first get to know the remote control feature on the mobile very well. This makes the following explanation a little clearer!

To access this feature, hold [PTT] and [MR] while [POWER ON].

The display will indicate -RC-, which I presume means 'Remote Control'.

If you have correctly matched your DTSS codes, frequencies, etc, the dual bander's keypad now becomes a function pad. Pressing certain keys enables or disables functions on the mobile rig by sending the DTMF sequences for you.

Please note that all this fuction does is send the DTMF tones over the air to control your mobile rig. I have not made a list of what each key does, but as the 79 sends the DTMF tones, the display will indicate the function. (i.e. - RPT ON, RPT OFF, TONE ON, TONE OFF, etc.)

emcom4hosp@aol.com

Hospital Disaster Support Communications System (HDSCS) Coordinator

HDSCS World-Wide Web Page:

http://members.aol.com/emcom4hosp/

For over 15 years, the 90-plus members of the ARES/RACES-affiliated Hospital Disaster Support Communications System (HDSCS) of Orange County, California have served over 35 hospitals in nearly 50 emergency situations. At the new HDSCS site on the Web, you can find out how volunteer Amateur Radio operators can be an important backup communications resource for hospitals, if the hams are well organized and trained.

There you will find:

* How HDSCS organizes to support hospitals
* What "dedicated communicators" are and why they are important
* Frequently-Asked Questions about hams helping hospitals
* The surprising answer to "How often do hospitals need hams, anyway?"
* Response from hospitals served by HDSCS
* Info given to new HDSCS members
* Recruiting hams for hospital communications
* And lots more...

* Volunteer Examiner (ARRL VEC)

I have scratch-built all my antennas for all bands, written antenna programs, and experimented with many types of antennas over the past 38 years. I have been a ARRL VE for 5 years now, as well as team leader. I started in computers by building the Altair in about 1968, later switched to Radio Shack. In 1982, I started assembling Clones, and still do to this day (for a living). I have written code in Basic, Quick Basic and C.

I have built power supplies, both low-voltage-high-amperage and hi-voltage-low-amperage. I have wound my own transformers, one of which still runs my VHF station after 20 years of use.

It is very hard to pin-point what one knows, as we are constantly learning. Also, we must remember the old adage, "USE IT OR LOSE IT."

I am an NTS operator running an unattended digital (Winlink, latest version) digital system. I operate a hub station for Eastern Canada Digital operations, including AMTOR, PACTOR, and CLOVER.

Lyndon Nerenberg VE7TCP, VE6BBM

lyndon@ve7tcp.ampr.org

I'm heavily involved in Internet Protocol (IP) networking over packet, as well as system administration of UNIX and UNIX-like operating systems (with an emphasis on networking, E-mail, etc.). My current concentration is on writing UNIX based tools (e.g. software for logging, antenna design, propagation analysis) that can be shared throughout the ham community.

I also maintain the ve7tcp.ampr.org server. This system hosts a variety of ham-radio related mailing lists as well as a comprehensive World-Wide Web site and FTP archive, and was one of the first Internet servers dedicated to ham radio. The system is also a hub site for the ampr.* newsgroups.

Information on the mailing lists offered can be had by sending an E-mail message to:

listserv@ve7tcp.ampr.org

containing (only) the word:

INFO

in the message body. The WWW server is located at the URL:

http://ve7tcp.ampr.org/

and the FTP server resides at:

ftp://ve7tcp.ampr.org/

Direct login access to the system is available to anyone holding a currently valid amateur radio license. The server provides a number of useful tools for the radio amateur, including satellite tracking software, CAD design software, SPICE, and other tools not generally available to people running on Microsoft Windows or Apple based PC's. (It runs 4.4BSD UNIX.) To obtain a login on the server, send a photocopy of your current amateur license, along with a SAE and IRC to:

Lyndon Nerenberg
1804 Juniper Street
Prince George, British Columbia
Canada V2L 1N7

Your login and password information will be mailed to the address listed on your license.

Maintainer of the Internet DX Mailing List

To subscribe, send an E-mail request to:

dx-REQUEST@ve7tcp.ampr.org

with the following line in the message body:

subscribe dx

I am involved in training for new and upgrading Hams, paying back for Elmering received over the years as I came into Ham Radio. I am a VE for VEC's active in local area. I am most interested in assisting young, old, and handicapped persons to discover Ham Radio. However, I want to help anyone that is committed to getting a Ham license or upgrading. I am most active on Ham satellites, mobile and fixed HF, Digital modes and construction. I am an avid electronics constructor, repairer and experimenter. I am trying to sample all modes, bands, and interest areas. I am also skilled in Public Relations, demonstrations, and "de-mystifying."

Dakota County, Nebraska ARES Emergency Coordinator (EC)

ARRL Official Bulletin Station (OBS)

I have been involved in Packet since 1984. I currently run a Packet BBS with the F6FBB software, as well as a number of Packet Nodes using TheNet Software. I have coordinated the Volunteer Exam Session in this area for a number of years. I operate 2 meters and HF, both CW and SSB. DX'ing and Contesting are some of my activities, along with collecting prefixes.

I have had NWS spotter training and am part of organizing the spotter network in the Siouxland area. AS the EC of Dakota county, I work with the Woodbury County, Iowa EC in the spotter effort.

During my business activity as a Systems Engineer with IBM, I have developed some expertise in PC's and have worked with the DOS, Windows and Windows 95 Operating Systems along with many Ham-related applications.

I have organized a number of Ham events such as Packet Symposiums and am the current Chairman of a Regional Ham Radio Convention.

I have considerable experience in computers, some in packet, with an informal training in electronics. My background includes electronic surveillance countermeasures such as looking for interesting signals or wire connections with spectrum analyzers/receivers and TDR's, etc.

I'm not very active in operating, but have had a fair amount of experience when young.

I would prefer dealing with people in my local area, since many well-informed experts are available via the Internet.

Educational Advisor to the American Radio Relay League

I specialize in developing growth in volunteer organizations and have published and made public presentations on this subject.

I have written and published training/educational curriculums for Novice, and Tech Plus amateur radio licenses. Of interest is the fact that amateurs licensed through my courses are very likely to upgrade as evidenced by the high number of hams in the Lawton, Oklahoma area that hold Extra Class licenses.

More recently I have been involved in securing building permits in Florida to put up amateur radio towers in this highly restrictive State.

The Netherlands CompuServe: pdreynolds@compuserve.com

http://www.xs4all.nl/~pdr123/pdr-home.htm

I am very lucky in that I earn my living in radio communications, so
my expertise is fairly broad (but not focused on amateur techniques
only):

* Modulation types - FSK, PSK, MSK
* Error control - various types of ARQ and FEC systems
* RF - Antennas, HF propagation
* Networking - TCP/IP over HF
* Frequency bands: VLF, LF, HF, VHF, UHF, SHF

This is a very brief synopsis of the areas that I have dealt with over
the years. I always enjoy discussing and researching a communications
problem so if you don't see it listed above drop me a line anyway,
especially if you happen to be in Europe.

* Volunteer Examiner (WCARS VEC)

I am the Assistant Principal at Estill County High School in Irvine, KY and have been in the education business for the past 23 years. I enjoy helping people earn their ham radio license privileges. I have a test team with the WCARS group and have been testing for a good number of years. We have tested over 300 hams during the last three years.

I also have been in the repeater business since 1973 (146.820) and have held a ham license longer that any other resident of Estill County Kentucky. I am the fourth ham to be licensed in our community, the other three have either become Silent Keys or moved from our county. I am very proud to have held a ticket for almost thirty years. I hope through my experience with the local emergency team, I can also provide advice on EMS. I founded the local Rescue Squad in 1978 and am still President of the corporation. I was also the local DES Coordinator from 1977-1993.

Chuck Rippel WA4HHG

crippel@exis.net

Secretary, Collins Collectors Association

The Collins Collectors Association would like to invite those of you who have an interest in Collins Radio to subscribe to the now fully automated Collins Reflector. This service is sponsored by the CCA and is provided at no charge to Collins enthusiasts.

There is an FAQ which will hopefully be sent to each new subscriber when they "sign on." If you would like one and don't get it, drop me an E-mail at my address above.

There may be a few initial bumps and glitches at first but we hope those of you who choose to participate will enjoy it.

As of 1/6/97, the Collins Reflector will be fully automated and I will discontinue forwarding the mail manually as in the past.

The new automated list processor will be a real upgrade. It will enable you to get the material in nearly real time and does not require me to forward each message manually. You will get the material much quicker than before. The Collins Listserver behaves much like the Boatanchors list. Simply, you subscribe to the list, send it messages which it then "reflects" back out to all those who subscribe. This is done once every ten minutes.

You must resubscribe to the new listserver in order to continue to participate. The automated list server follows the same guidelines contained in the CCA FAQ. Please continue to follow those guidelines for posting and contributing.

Here is how to subscribe:

Send an E-mail message to:

listserv@listserv.tempe.gov

Leave the Subject header of the message blank and in the body, simply type:

subscribe collins

The listprocessor will output an E-mail message back to you with easy to follow instructions asking for your confirmation. At that time, you will be asked to send a second E-mail message to the listserver. Follow those instructions exactly and send the second, confirmation, message to the listserver.

If all is successful, you will be signed up to the list and a complete set of instructions will be sent back to you in the form of an E-mail by the automated list server.

Finally, a very big thanks to Dave Kelly, AI7R and the City of Tempe, AZ who have graciously provided and set up the server. Dave and the Collins Collectors Association sponsor the Collins Reflector as a no charge benefit for Collins afficionados everywhere. Enjoy!

I suspect that I would be classified as a "classic" amateur operator. While not a proficient homebrewer/RF designer (yet), I pride myself on the ability to construct equipment from kits, as well as being able to competently debug and fix the equipment I use - this is a set of skills that is becoming too rare in our "appliance operator" world.

While many see a need to run high power and large antennas, I do not. I live in a development with antenna restrictions, and I choose to not expose my family and neighbors to high RF fields.

This has led to my love of QRP (low power) operation. Working from the eastern U.S. into Germany at 100 Watts is pretty neat - but to do so on 1/2 Watt? A flashlight uses more than that, and it's being seen some 4,000 miles away, AFTER bouncing off the ionosphere TWICE!

I also enjoy an occasional contest, although I am more relaxed about operating than the annual "winners." I always operate on Field Day with fervor, last year assisting the University of Maryland in making 205 QSO's (most of them CW) at 4 Watts of output power into wire antennas.

I greatly prefer CW over phone. I can frequently be found on 2m repeaters during trips and the drive to and from work.

I have confirmation of contact with 138 countries and have earned my WAS and WAC awards. I have been a Volunteer Examiner since age 18, and a ham since age 15.

I get a great deal of joy from watching others learn something new, and then embrace it as their own. Ham radio is a wonderful way to become involved in public service and a great, technical, hands-on

hobby that can lead to careers and a lifetime of enjoyment. I find great pleasure in making others aware of it.

Henry Ruh KB9FO

atvq@aol.com

Amateur Television Quarterly (ATVQ) Magazine

The magazine's E-mail address and mine are the same: ATVQ. There is also a ham radio section for "manufacturers and dealers" on America On-Line in which we list Amateur Television Quarterly, as expert and manufacturer. That is where most of the Frequently-Asked Questions (FAQ's) come from.

Most FAQ's are answered in one of two books we published. ATV Secrets for Aspiring ATV'ers is a non technical book, and Volume II is a 300-page technical manual with theory and projects for all equipment necessary to operate an ATV station. Prices in US funds are $9.95 and $24.95 plus postage ($3.10). Most of your inquires can be answered by either of these two books.

I am also compiling a set of W6ORG Notes, a regular column in ATVQ, which answers many of the technical FAQ's on various equipment and operations. This will be available for $9.95 also.

I can Elmer on most subjects, but not spread spectrum or packet.

I have nearly 30 years experience in electronic/computer service work. I enjoy designing, building, and operating vacuum tube and solid state equipment. I restore, test, repair, and operate antique radio equipment. The maximum power I use for daily operations is always below 100w, and most of the time, I operate at QRP (5w) or less! (More with less.) I have a real enthusiasm for building just about anything from nothing, as part of the homebrew aspect of the hobby. When not working DX, enjoying a good contest, or have a great time on Field Day, I watch over my 6m repeater, or work VHF packet. I am glad to be of help to those in need! I fully support the Elmer program as a means to bring new people into Amateur Radio. I teach Novice and Tech classes for aspiring Amateurs. I am also a merit badge instructor for the scouting program, and the advisor for the Bloomsburg University Amateur Radio Club.

* Radio Officer and Chairman of Operations Committee for Lycoming County, Pennsylvania ARES/RACES/SKYWARN program
* Assistant EC for my local district, and Pennsylvania State Director for NACEC
* President of Keystone Amateur Radio Association (KARA)
* President of The Bald Eagle Repeater Association

What's dull about it! I think it's a fantastic hobby, with hundreds of
different facets, enough to suit anyone who takes it up. I've been
involved with Amateur Radio since 1953 and have never lost interest,
not for a single day.

BTW I have lots of other hobbies as well but this one takes the prize.

John Ackermann N8UR

jra@febo.com

http://www.febo.com/

My primary interests are in packet radio network building
(particularly higher speed stuff) and TCP/IP. I've got quite a lot of
info on using the Kantronics D4-10 19.2kB radios, as that's the
hardware we've been struggling with here.

I'm now working heavily with Linux, and help run a TNOS/Linux BBS, and
a Linux native-AX.25 switch. Although I'm not "the world's greatest
authority" on either, I'd be happy to help folks with questions to the
extent I can.

I've developed some experience with full-duplex packet repeaters. I've
built 2 19.2 repeaters, and am working on a 9600 baud one now.

My World-Wide Web Page above has a reasonable set of resources for
digital networking, including HTML versions of some of my work, sample
configuration files for Linux AX.25, and some Linux software tools, as
well as the Ohio IP address coordination info.

I've just finished writing a book on TCP/IP that TAPR will publish
(hopefully) by the end of the year. It'll be called _Networking
Without Wires_ and is a completely rewritten, and greatly expanded,
version of the old _IntroNOS_ document I wrote several years ago. In
the meantime, I've made the old _IntroNOS_ available in HTML format on

my World-Wide Web Page above.

TAPR (Tucson Amateur Packet Radio) has formed a special interest group to discuss issues of regional packet networking (Net-SIG). As a result, the TAPR net-sig mailing list was born, and is now ready for operation.

This list is <not> intended to replace any of the existing packet-related mailing lists. Its purpose is provide a medium for communications among those interested in packet radio networking, both dealing with technical issues and political/regulatory ones. We'll discuss things like how the potential 219MHz band will fit into the networking picture, how to link areas using different networking schemes, how to set network parameters, etc. The list's charter will be posted there regularly.

The address of the list is net-sig@tapr.org and you can subscribe by sending mail to listserv@tapr.org with the text "join netsig".

Apart from subscribing to the list, you can contact me for further details about the Net-SIG (including upcoming conferences).

425 DX NEWS Weekly Bulletin WWW PAGE (NEW SITE!!!)

- ------->> http://www-dx.deis.unibo.it/htdx/ <<---------

NEWS, INFO, RUMORS, DXPEDITIONS, IOTA ACTIVITIES and more

DX CALENDAR, WABA AWARD (rules & scores) now available

in English Version and Italian Version

Same server of the IK4LZH site for QSL MANAGERS.

I am an IOTA chaser, I work DX and I join contests. Actually I'm in love with RS sats and DOVE telemetry. I'm the Shortwave Listening (SWL) coordinator of the Italian Amateur Radio Association and I have a regular SWL page in their official magazine Radio Rivista. Recently I joined the 425 gang that produces the 425 DX News bulletin. I translate it into English and send it to many DXers via E-mail. I also maintain a WWW page to provide the bulletins graphically with previous numbers and more to come. I've been an SWL since 1974 when I received a receiver as gift from my parents. Now I'm 36 and I'm running also a free BBS devoted to HAM/SWL.

American Radio Relay League (ARRL) Webmaster

The American Radio Relay League is pleased to announce the startup of ARRLWeb, your League's new HQ-based World-Wide Web site, at the URL

http://www.arrl.org/

ARRLWeb will serve as an essential Internet resource for active hams, carrying ARRL news, details on upcoming hamfests, conventions and Amateur Radio examinations, the ARRL Publications catalog, information of ARRL membership benefits and services, and more.

In inaugurating this new service, the League thanks Scott Ehrlich, WY1Z, and the other Boston Amateur Radio Club volunteers who've worked since December 1994 to keep ARRL up and coming on the Web via the ARRL home page they installed and maintained at oak.oakland.edu. Their volunteerism helped show us that upgrading our Internet connection to a level that allowed on-campus Web service would be essential to

ARRL's mission of serving Amateur Radio.

Your comments, criticism and suggestions on how to make ARRLWeb bigger
and better are _essential_ to its ongoing success, so please drop by
and say hello!

QEX Editor

modes and radios.

My home page above is a Link page I mostly use to find what I am
looking for.

Devon Bowen KA2NRC

bowen@olsen.ch

Maintainer of the rec.radio.amateur.* Supplemental Archives available from:

ftp://ftp.cs.buffalo.edu/pub/ham-radio/

[_Editor's Note_: Fixes have recently been made to the FTP software at this site so that the above URL will now work with most Web browsers.]

Maintainer of the Internet Ham Radio Callbook Server at:

telnet://callsign.cs.buffalo.edu:2000/

For further information about the Callbook Server, please consult the server's help facility, the rec.radio.amateur.misc FAQ, or additional server documentation at:

ftp://ftp.cs.buffalo.edu/pub/ham-radio/faq_callsign

Well, I've been talking about it for years. Those of you that have talked with me via E-mail know that. But this time I've actually started on my rewrite of the callsign server at Buffalo. And I've finally got a design that I'm happy with. The new searching capabilities are going to be *much* improved over the current system. I'll be getting rid of the bugs in the current telnet system and making it available to more people. Also coming is a WWW front-end for web surfers. Time to step into the 90s.

Part of the rewrite is an entire reorganization of the database look-up system. The old system was very specific to the FCC database format because that's all that was available when it was written (yes, the server is very, very old). But now there are a number of databases floating around the net for different countries and I am rewriting the system to be more flexible and to accommodate a variety of formats and search types.

In doing so, I'll have the ability to add data for many more countries. That is, of course, if I have the data. In order to do this I need help. I need to get in touch with all people that have access to databases from countries other than the US. The more up-to-date these databases are, the better. If you have access to a database and would be willing to donate a copy to the callsign server for everyone to use, please contact me. A lot of people would genuinely appreciate it.

The callsign server has become remarkably popular on the net and this has happened because the community has contributed so much to it over the many years it's been running. I have heard stories of reunions with old classmates, stories of silent-keys that have been remembered, and stories from blind hams doing simple look-ups of other hams, all possible because of the server. Congratulations to the community for making this system so useful.

Work on this project has been delayed such that its completion time is somewhere in the indefinite future. In the meantime you can access the current server.

Please direct all other feedback, submissions and administrivia regarding these services to my E-mail address above.

I have been with Linux since it was first available. I have been a keen homebrewer for over 30 years, but I don't do much now due to lack of time. I have built lots of HF gear, including synthesized gear, and also a lot of test gear. I have also homebrewed magnetic loops, which is great fun. I have put together PC's and help other people with Linux issues. On packet, I run TCP/IP using LNET which is WAMPES-adapted for the UK by Darryl, G7LED.

Team Leader, W5YI VEC

(Exams for Del Norte County every other month)

I've been a ham since 1933. I taught electronics, AC, DC, and radar principles/theory at the U.S. Army Signal Corps School at Fort Monmouth, NJ during World War II. I was chief engineer at KDB in Santa Barbara, CA from 1946 to 1951. I was engineer and technical director at NBC TV studios in Hollywood and Burbank from 1951 to 1982. I have one student now going for his General and prefer to teach the overall picture. I have done little or no benchwork on new equipment in the last 15 years. I'm still learning digital theory and techniques, but boards filled with chips do not evoke a sense of familiarity or recognition. I'm also still learning about the Internet.

GRAPES 56 kBaud Packet Radio Modems

I'm not an official representative of the Georgia Radio Amateur Packet Enthusiasts Society (GRAPES), but I am in contact with them, and have experience using their 56 kBaud radio modems. At the very least, I can forward requests I can't handle to the proper people.

The Proceedings of the 6th Computer Networking Conference has a paper by WA4DSY explaining the theory and practice of the 56 kBaud radio modem. (I think it's the 6th, I don't have my copy handy.)

GRAPES furnishes instructions for modifying a TNC2 to drive the modem, but there are better solutions. The Ottawa PI card and the Gracilis PacketTwin card are two good solutions. Of course they are PC bus cards. If you need standalone capability, the Kantronics Data Engine can handle it, as can the incredible Gracilis PacketTen. PacComm claims their new Sprint TNC can, too (PacComm now also manufactures the Gracilis cards under license and you can get them either from them or from Gracilis direct).

WA4DSY has interfaced raw telco codecs to the modems and done "digital voice" while mobile. It works quite well.

If you want information on the RF modem (full document sets are $20 US, creditable towards a later order) write to GRAPES at

GRAPES, Inc
P.O. Box 636
Griffin, GA 30224-0636
USA

GRAPES is a volunteer networking organization. There's no phone number, and turnaround on info requests may be slower than when dealing with commercial outfits. Please cut the volunteers a little slack.

Derrick C. Cole KC4WEJ

dcc@ssds.com

I'm a Network/Systems Analyst with a national systems integration firm. My professional fortes are UNIX-based system administration, sendmail, TCP/IP-based ethernet network engineering, network systems security (including firewalls), and programming (primarily Perl and

C).

I've had notable success dealing with issues surrounding PC's, DOS, Windows and various applications/protocol stacks, including PC-NFS and LAN Workplace.

I'm still clueless in the electrical/circuit department.

Maintainer of ACC List Server (Repeater Controllers):

http://www.engrng.pitt.edu/~rrc2/acc.html

The ACC list has approximately 300 members at this time. I am trying to restrict the list to only ACC users (control people) and owners. The list is also supported by the new owner of all the rights to ACC, Link Communications. I am also running the Link repeater controller list server. It has approximately 90 members at this time. The way to join the list server is to send me a short E-mail and tell me what equipment you are using. (Note: I have no ties to Link Communications or ACC. I started the Link list first and found how useful it is. I had a lot of requests to start the ACC list and did it.)

Maintainer of the Linux HAM and AX.25 HOWTO's

Available from:

http://sunsite.unc.edu/mdw/HOWTO/HAM-HOWTO.html

http://sunsite.unc.edu/mdw/HOWTO/AX25-HOWTO.html

Please direct any feedback, submissions, or administrivia regarding
these resources to my E-mail address above.

I've been an active Linux advocate since it first appeared on the
Internet. I was looking for an operating system that would better meet
the needs of my interest in Amateur Radio and provide me with an
environment in which I could actively experiment and develop. Linux
provides that and I've been promoting its use within Amateur Radio
ever since.

I'm an early contributing member of the Linux Documentation Project,
and you'll find the amassed works for it at:

http://sunsite.unc.edu/mdw/

ampr.org IP Coordinator for Sydney, Australia Metropolitan Area subnet
(44.136.xxx.xxx)

(I'm also the co-administrator of the Sydney (Australia) University of
Technology Internet/ampr.org gateway.)

I'm happy to assist with information relating to:

* Linux, especially when related to Amateur Radio.
* Amateur Radio Internet Gateways

if I can't help with something, I probably know someone who can.

Carl Estey WA0CQG

wa0cqg@tapr.org

North American Digital Systems Directory World-Wide Web Page:

(Sponsored by Tucson Amateur Packet Radio, TAPR)

http://www.tapr.org/directory/

The purpose of the Digital Systems Directory is not to manage,
coordinate, or regulate the usage of digital systems, but to provide
the most up to date and accurate listing of digital systems that can
be provided. Neither is it a formal organization, but a mechanism to
allow regional groups to provide and share information regarding
digital systems.

The Digital Systems Directory listing is intended for use by
individuals to further their enjoyment of the hobby and by

organizations to help plan and develop digital networks.

I am a practicing electronics engineer (for over 35 years) with expertise in solving problems in the design of linear circuits, audio signal processors, low frequency (DC to 10 MHz), low noise, field effect devices, power supplies, batteries, and similar analog situations. I'd be glad to assist others in the solution of their electronic problems in these and tangential areas. I started in ham radio as a kid in the 50's, vacuum tubes, motor generators, and most everything related to WWII surplus equipment. Was a design engineer at Texas Instruments for several years in the heyday of discrete devices and linear integrated circuits, mostly for military and surveillance use. My present concentration is toward digital telephonic communications. Have now gotten pretty familiar with use of the Internet. I guess it goes without emphasis that my capability goes beyond the areas I listed as being most competent, but I could be a resource you may apply as you feel my experiences would be helpful.

Brian Hammill, KD4BFJ | brianh@dante.exide.com
Software Engineer | Exide Electronics - Small Systems Group
Raleigh, NC USA | "Powering Your Network with Intelligent Solutions"
- ---

I am especially interested in VHF/UHF and microwave amateur bands as
well as Amateur television. I am treasurer and a founding member of
the newly-formed Triangle Amateur Television Association in
Raleigh-Durham-Chapel Hill, NC. I am willing to share my expertise in
the following areas:

* ATV - Getting started, starting local activity, repeaters.
* VHF/UHF - Propagation, what you need to get started, operating
portable, contesting, weak signals, and DX.
* Sealed Lead Acid Batteries - How to take care of them.

ARRL Laboratory Engineer

* Radio Frequency Interference (RFI) matters
* RF Exposure Safety/Regulations
* Equipment Testing

My survey of automotive EMI problems is mostly complete. The results are in September 1994 QST, including warranty and customer service information for most automobile manufacturers (many of whom have published installation guidelines).

I am also continuing to pursue more formal contacts and standards-making through the EMR and EMI Standards Committee of the Society of Automotive Engineers (SAE), of which I am a member.

Copies of General Motors installation guidelines are available. Saturn allegedly has a video on mobile installation, but none of the dealers seem to know about it. I have a call into one of my low friends in high places. :-)

If anyone would like a copy of the GM installation guidelines, send a 9X12" SASE with two units of postage *and* a specific request for the "GM Installation Guidelines" to the ARRL Technical Department Secretary, 225 Main St, Newington, CT 06111, USA. A copy has been reprinted in the ARRL book -- Radio Frequency Interference -- How to Find It and Fix It.

EMI/RFI Resource List and RFI Tips package available. A business SASE with 98 cents postage is appreciated. Please specify the desired documents in your correspondence.

The FCC has released the results of a telephone interference survey just completed.

If you would like a copy of the survey, which includes a list of telephone models checked, send an SASE with two units of first class postage to the Technical Information Service at ARRL HQ. Alternatively, you may obtain an electronic copy from the ARRL Info Server below.

If leakage from your local Cable TV operator is interfering with the Amateur Radio Service, it is in violation of the provisions of Part 76 of the FCC regulations.

I would first direct the problem toward the cable company system engineer or service manager. Chances are the "front-line" people who answer the phone don't know what you are talking about.

If this is not effective, contact me here at ARRL HQ. I can put you in contact with our liaison to the National Cable Telecasters Association. This liaison will help your cable operator understand their responsibilities.

For CATV interference problems in general, I recommend you obtain our Radio Frequency Interference Book. If you are a League Member, you can also get a copy of the ARRL Technical Information Service info package on CATVI -- "EMI/RFI - CATV" by sending a LARGE SASE with 3 stamps on it to the ARRL Technical Department Secretary, 225 Main St, Newington CT 06111, USA. This package is a reprint of an article I wrote for Communications Technology -- the Journal of the Society of Cable Television Engineers. We submitted it to "their" journal because we felt that it would carry more weight with the cable companies.

If you have any questions after you have read the material, contact me here at HQ. I can usually get back to you within a few days to offer some additional help.

Many EMI/RFI files are also available from the ARRL Info Server. See Mary Carcia's entry for more information.

ARRL Technical Information Service Coordinator (tis@arrl.org)

The ARRL Technical Information Service (TIS) is a valuable membership benefit that helps hams find answers to difficult technical questions.

The answer to a ham's most common technical questions can be found in one of the many books about Amateur Radio. Folks who call or write to ARRL TIS staff are often referred to one of these books or to a past magazine article.

However, most hams find that the fastest way to get the answer is to do their own research. Publication catalogs often talk about what kinds of information are available in different books. A few good books will answer the vast majority of questions as well as enhance a ham's knowledge and enjoyment of this fascinating hobby.

Magazines are also a superb technical reference. An annual index of articles appears in the December issue of QST and other magazines. These indexes will usually have an article or two (or six) about a particular topic. If an older QST or QEX article is not available locally, the ARRL Technical Department Secretary can provide a copy for a small fee. Back issues are also available from the QST Circulation Department.

The ARRL Technical Information Service is a valuable source of information and research for questions that cannot be answered by other means. ARRL TIS has information packages and bibliographies that are available on request to answer most technical questions.

For those who want to know if something has been previously published on a particular subject, TIS can also assist with research to locate this information. TIS also helps locate companies that sell hard to

find parts or supplies used in our hobby.

Many TIS files are also available via the ARRL Info Server. See Mary Carcia's entry for more information.

See Jon Bloom's entry for information about the ARRL World-Wide Web Home Page.

I am a Civil Engineer by training and a DX'er by choice. My Elmer taught me how to work pile-ups and how to build antennas, having put up 12 towers all over 100 feet. I know what it takes to get a tower up. I don't climb anymore, but have a lot of info. I like working on antennas and have several big Moseleys up in the air. It would be great to pass on what I have learned, as we are not all born knowing how to do everything, and the older I get, the smarter my father gets.

* ARES/RACES/SKYWARN
* CW
* Field Day
* HF/Contesting/DX
* Novice/Tech Instruction
* RFI
* Seminars/Lectures
* Volunteer Examiner (WCARS VEC)

I've been licensed over 25 years. I was one of the first VE's certified by WCARS VEC. I have served for several years as a proofreader for the NCVEC Question Pool Committee. I work closely with the WCARS Directors, and am an active VE with that organization

I have been involved with Emergency Communications and Traffic handling from almost day one, having earned my first BPL at age 16 as a novice. I have served as Assistant EC, County EC and currently serve as District Emergency Coordinator for ARES/RACES and District Radio Officer for Emergency Management Area F of North Carolina. I also coordinate SKYWARN activities in our area.

I have served as Hamfest chairman, assistant chair, etc., as well as an officer of the local club, the Western Carolina Amateur Radio Society. I designed our homepage, am quartermaster of club equipment, and carry the keys to the club repeater. I frequently teach both theory and code for local Novice/Tech classes.

I have been Field Day Chairman for five years, serve on the RFI committee, hold WAS Awards both as a Novice CW operator and SSB Extra Class, a DXCC with 86 of them worked as a Novice. I am also the National Board Chairman of the Geratol Net, a WAS net which meets nightly from October thru April. I also am chairman of the local club's packet committee.

I "dabble" in helping newcomers make dipoles and other simple HF antennas and am frequently a new licensees first contact. (A debt I am repaying to my three trusty Elmers of so many years ago, two of whom are now silent keys)

I would be willing to help in these general areas on-line or close-by on the phone or in person. (I am a college professor by trade)

Jack G.F. Hill W4KH

* Keeping it Simple (avoiding task overload)

I have agreed to provide a new home for the "Boat Anchor" mail list, with the blessings of Paul Prescott, N1AAC, who took over from Our Esteemed Founder Jim Lockwood, KM6NK. I have also agreed to take over the rec.radio.amateur.* Working Group mail list, formerly maintained by Ian Kluft, KO6YQ. In addition, a new mailing list devoted to homebrewing tube transmitters and receivers ("Glowbugs," a sort of intersection between Boatanchors and QRP) has been created.

The mailing list addresses are:

* boatanchors@theporch.com (*)
* rra-wg@theporch.com
* glowbugs@theporch.com

Use these addresses for messages of general interest to the entire group. Please don't use them to subscribe, change address, etc.

(*) Effective 15 March 1996, the BoatAnchors list went to a subscription-only list, with $12 US per year as "dues" to support the list.

With monthly costs for Net access at $350 US/month and telephone line charges of $50 US plus, we are not getting rich. The fee was set after much consultation and wrangling, and was designed to cover the costs of running the list... and hopefully provide a surplus to upgrade the services we can provide, like better mail delivery, larger archives, etc.

The new automated list manager address is

listproc@theporch.com

Use this for subscribing, unsubscribing, getting archived info, getting the FAQ message, changing your address, etc.

To subscribe, send a message to this address with "subscribe boatanchors <your name>" or "subscribe rra-wg <your name>" Similarly, to unsubscribe, replace "subscribe" with "unsubscribe"

The new list owner address is

listown@jackatak.theporch.com

Use this address only when there is a problem which really truly can't be resolved otherwise.

I am 36 years old, have been a ham for 22 years, and currently hold an Extra class amateur license. I got my first ticket when I was 14 years old, thanks to my Elmer who is now a silent key.

I am an instructor for amateur radio classes, Novice through General, and teach CW at least once per year. I am also the VE team liaison for the TEARA VE team, and test monthly in Smithfield, NC.

I maintain a number of repeaters from 10 meters through 900 MHz including ATV. I build a lot, and enjoy restoration/construction of vacuum tube amateur gear.

I enjoy ragchewing and DXing, with about 75% of my operating time on HF spent on CW. I also enjoy weak signal and FM operation on 6, 2, 1.25m, 70cm, and 33cm. I am experimenting on 23cm and 10 GHz.

I maintain a number of sites, some of which are related to amateur radio. The URLs are:

Civil Air Patrol (CAP)

I was Communications Officer and former unit Landstation Bluebird 284, 1980-87. Statistically, Landstations are relatively rare. A land station in CAP is an HF-capable station operating from both mobile and permanent locations as needed. As a land station, I checked into several regional nets for the Missouri Wing of the CAP. I am familiar with the CAP emergency protocol as well as MARS and ARRL. Also, I have extensive teaching experience for Novice to General levels and currently am a teacher.

I am an Advanced class operator, working on Extra. I work professionally as a manager of a computer services department in a large hospital system with more than 12 years experience in PC and Host Systems networking, I hold a degree in Electronics Engineering, as well as many hours in Computer Science Engineering. I operated a land-line BBS for 8 years, and now maintain a packet mail drop on 145.01 MHz. I maintain the TriCounty Amateur Radio Club (TCARC) of North Texas home page on the web:

http://www.why.net/home/kb5ylg/tcarc/index.html

and am the 1996 President of the TCARC. I am also the appointed Emergency Coordinator for the City of Azle for Tarrant County RACES.

I like to give talks to Amateur Radio Clubs, school groups, Scouts, and similar groups, mainly about Amateur Radio topics. Recent presentations I have done include Field Day preparation for clubs, Computers and Ham Radio, Building Your First Dipole. I'm open to presenting other topics as well. I also help local amateurs to prepare their own presentations and talks.

I am a Baptist minister, and would be delighted to administer a Ham Radio theme wedding! <grin> I would also provide ministerial services for Ham related special events.

I will also provide free Novice/Tech licensing instruction for groups of 5 or more in the Tarrant/Parker/Wise County region of North Texas. Typically this involves about 18 hours of lecture, and some self study on the parts of the students. I'll do this free for nonprofit endeavors.

P.S. I monitor 146.98 Boyd repeater while commuting, and you might find me working HF CW just about any time.

with your E-mail address as password.

Via TAPR's Listserv (http://www.tapr.org/tapr/html/internet.html)

TAPR maintains several SIGs in various interest areas. To get the
latest list of SIG groups, send an E-mail message to:

listserv@tapr.org

with the subject line:

Request

and one or more of the following in the body of the message:

list

for list of mail groups on TAPR.ORG

information listname

(where listname is the name of the mail group)

to request the information on any mail group

subscribe list your_first_name your_last_name

(where list is the name of the mail list you want to join and
your_first_name and your_last_name are your first and last names,
respectively)

to subscribe

Some of the current SIGs include:

NETSIG Regional Networking SIG
BBSSIG BBS SIG
HFSIG SIG on HF Digital Topics
DSP-93 SIG for those that are building TAPR AMSAT DSP-93 kits
APRSSIG SIG on APRS
TAPR-TNC SIG on TNC Issues
DSP SIG on general DSP topics
MIC-E SIG on supporting the TAPR APRS MicEncoder kit

TAPR-BB Announcement channel for TAPR bulletins and information

General Information about TAPR:

* Ever heard of a TNC?
* Interested in general packet radio information?
* Interested in Spread Spectrum Communications?
* Interested in high-speed packet operations?
* Interested in other types of digital communications?
* Interested in experimenting or building kits?
* Interested in keeping up-to-date on national digital and packet
issues?

Then you might be interested in TAPR!

Goals:

* Support Research and Development efforts in the area of amateur
digital communications
* Disseminate information on packet and digital communications
* Provide affordable and useful kits for experimenters and hobbyists
* Pursue and help advance the amateur art of communications through

publications, meetings, and standards

History:

If you have used a packet radio TNC, then you are already a part of TAPR history.

The TNC (Terminal Node Controller) project was the first big project that TAPR tackled and completed. Now TAPR covers a wide range of interests including: APRS, Spread Spectrum, networking, Timing, DSP, HF, and much more.

TAPR was founded in 1982 as a national organization with interests in the areas of packet and digital communications. Today, TAPR continues as a membership supported non-profit amateur educational research and development organization. TAPR currently has more than 2500 members, worldwide. TAPR continues to develop kits for the amateur community and is working actively on publications and communications standards.

Membership:

Membership in TAPR includes a subscription to the quarterly published Packet Status Register newsletter. PSR has been published since 1982 and is recognized as an authoritative source for up-to-date user and technical information on packet radio. Much of the material in PSR is timeless. Back issues may be obtained from the TAPR office. Membership in TAPR is $20 US for one year in USA, Canada, and Mexico. Outside North America is $25 US.

Join the amateur digital-revolution -- Join TAPR!

Phil Karn KA9Q

karn@unix.ka9q.ampr.org

http://people.qualcomm.com/karn/

High-Performance Software Modem Project

Recently I've been working on a prototype SQPSK (staggered quadrature phase shift keyed) modem for the amateur satellite channel. This modem is implemented totally in software running on a PC with an ordinary (non-DSP) Soundblaster card. It runs at 1200 bps and fits into a SSB transceiver bandwidth.

I've made good progress and have put some info up on my web page about it, including an audio file to show what it sounds like in noise when the signal is still copyable, available from:

http://people.qualcomm.com/karn/ham.html

Watch that page for an announcement of when I actually release the code, which I plan to integrate into KA9Q NOS.

Spread Spectrum

I've been trying to answer the question of consequences of promoting relatively wide-band digital modes on band occupancy and throughput (i.e., What gets optimized? Are there tradeoffs in quality vs. quantity?) in the context of the spread spectrum rules debate, but I think it needs to be a much wider discussion. See my reply comments to the FCC on this issue:

http://people.qualcomm.com/karn/papers/index.html

(See also Steve Bible for more information on Spread Spectrum)

[_Editor's Note:_ I'm honored by the presence of many advanced-level Elmers in this directory, including Jeffrey Angus, Gary Coffman, and now Phil Karn. Phil has graciously agreed to appear in this directory for the purpose of elmering and technical exchange for the advanced topics listed above. As with all of my Elmers, please respect their time by only seeking assistance from them for the topics under which they are listed. There are many Elmers willing to answer more beginning-level packet radio questions, including basic questions about IBM PC hardware, TCP/IP and NOS. Consult the "IBM PERSONAL COMPUTER (PC) AND CLONES" and "PACKET AND DIGITAL NETWORKING" categories in the Subject Quick-Search Index for a complete list.]

info larc@seta.fi

The Lambda Amateur Radio Club (LARC), is an international club for gay, lesbian, bisexual and transgendered radio, electronics, and computer enthusiasts (and their friends). Membership is open to all who are supportive of sexual minorities.

Members receive our newsletter, the _Lambda Net News_ each month, learn about our public service activities, keep track of our weekly activities such as Internet Relay Chat (IRC), and follow the planning and may even participate in our fourth LARC-sponsored DXpedition-Caribbean vacation in 1998.

If you'd like to make many new friends, consider joining our club! We'll be happy to mail you an application right away. Just send an E-mail request for an application to:

larc@net-quest.com

OSCAR (Orbiting Satellites Carrying Amateur Radio)

I have been an active satellite operator on both high-orbiting (elliptical and low orbiting satellites (LEO) since 1990. I hold satellite DXCC #85 and I currently have 210 countries confirmed on satellite. I enjoy both CW and SSB and DXing. I am a member of AMSAT.

LARC has sponsored three DXpeditions to the Caribbean focusing on satellite operating.

larson@w6yx.stanford.edu

My areas are fairly general, and I teach classes (Novice and Tech, with and without code, and upgrade sessions) at W6YX. My main audience is to the Stanford (University) community.

I am also involved with some less common modes, such as fast scan television and weak signal VHF and UHF.

Zack Lau W1VT

Zack Lau W1VT Expertise: Design of SSB/CW amateur transceivers
c/o ARRL Lab : up to 222 MHz. Design of transverters

I'm with the Team Eifel ARS located in Bitburg Germany. We are a club
primarily set up for American Servicemen and Women in the Eifel Region
of Germany. We provide ARRL VEC test sessions and help individuals,
regardless of nationality, gain a U.S. license. This is accomplished
by providing study materials and teaching. We also provide assistance
in obtaining German Reciprocal licenses.

I have a fair background in packet, a general knowledge of satellites,
and I'm fairly knowledgeable in hiding antennas.

Author of the QRZ! Ham Radio CDROM

I am interested in receiving amateur-radio-related public-domain and/or shareware programs, data bfiles, frequency lists, etc., that would make a useful edition to the QRZ! CDROM. Can help arrange volume discounts for clubs and groups, and will donate copies of QRZ! to qualifying non-profit organizations. Send E-mail or call +1 (602) 483-2036.

We now have the QRZ! FTP archive and QRZ! WWW server online, 24 hours a day. Our connection is via a T1 line so you should get pretty decent file transfer times.

We've got about 7,000 files online, including radio mods, software, most everything imaginable. We are also accepting uploads of all ham radio related material.

Feel free to stop by and have a look:

* ftp://ftp.qrz.com/
* http://www.qrz.com/ (WWW interface to the FTP archive as well as a Callsign database server)

Authors of ham radio shareware programs, data files, mods, etc., are invited to contribute their materials to the QRZ! anonymous FTP server above.

I would also like to thank those who have volunteered in helping port the QRZ! source code to a wide variety of platforms. In the next edition, we'll have support for DOS, Windows, OS/2, Windows NT, Sun, NeXT, SGI, Linux, AIX, and HP/UX executables, directly on the disk.

Notably not mentioned is Macintosh, which so far has been a bit troublesome to put together. If anyone who can program in 'C' on a Macintosh would care to volunteer, please let me know. Although there is an experimental Mac interface at this time, I'd like to make it an officially-supported platform.

The QRZ! Callsign/E-mail Registry now contains over 4100
callsign-to-E-mail-address listings and is growing daily.

We have a WWW page where you can input your E-mail address directly
into the QRZ! Callsign Database, where it will be published on both
CDROM and on the Internet. When you use this page, your E-mail address
is made instantly available to the online database.

Everyone is encouraged to check in and add their E-mail address to the
server. There are no charges or listing fees, and it's free to all
radio amateurs. The procedure takes only a second, and you are only
asked to supply your callsign and E-mail address.

Register your E-mail address today!

We're pleased to announce that the online FCC database at qrz.com is
now updated nightly from the FCC with fresh information.

According to FCC rules, if you've just passed your first test, you can
begin operating as soon as your callsign shows up in the online
database.

Please pass on any ideas, suggestions, comments, etc., to my E-mail
address above.

How do I locate this publication of used ham gear for sale?

1968. TRADE Uniden/Bearcat BC-200XLT plus $$$ for YAESU FT-50RH

Newsgroup: rec.radio.amateur.misc
Date: 1997-11-03 00:00:00 UTC
From: Mark Russo <mrusso@hoflink.com>
Message-ID: <345E5C61.1F19@hoflink.com>
Source record: 187535
Cross-posted to: rec.radio.amateur.misc,rec.radio.swap,rec.radio.amateur.equipment,rec.radio.scanner,alt.radio.scanner

Hi to all, I have a Uniden/ Bearcat BC-200XLT scanner that receives
full cellular also the cordless phone frequencies. The 200XLT
is in very good condition. It has 200 memory channels, leather case,
manual and a good battery pack with charger.
I have seen this scanner on the newsgroups for 200 dollars.
I would like to trade for a Yaesu FT-50R with FTT-12 keypad
(if possible). The FT-50R must be in good working order on both
VHF and UHF bands. It can be cosmetically challanged as long as it is
fully functional. I will balance the deal with cash if need be. How
much cash depends on the condition of the FT-50R.

NOTE It may be illegal to receive cellular in your area.
Please e-mail me direct at: mrusso@hoflink.com
Thanks, Mark N2FLF

* Antennas (HF/VHF/Wire/Mobile)
* Antique and Older Equipment
* HF
* Homebrewing
* Chemical Safety

I can help people with HF stuff, cheap antennas, and am willing to
help troubleshoot problems with rigs.

I believe that one of the pillars of ham radio - construction/
understanding at the burn-your-hand-with-a-soldering-iron level - is
drifting out of ham radio. With Japanese radios which cost so much,
fewer and fewer hams are willing to risk their warranty to service
their own equipment. I would like to see a turn-around here...

Raymond Sarrio WB6SIV

I have been licensed for almost 20 years and have seen quite a bit. I deal mostly with helping new hams get going on HF including helping with antenna projects, etc. I have taught novice classes in the past and continue to do so. I also have extensive experience with the VEC program including starting the Dunedin ARA VE team.

Internet Services (Finding FAQ's, using Usenet, FTP, telnet, Archie, FTP mail-servers, mailing lists, etc., etc.)

Club Activities, Examinations, and other events in the Omaha/Lincoln/Council Bluffs (Eastern Nebraska/Western Iowa) area.

Also willing to provide newsreader kill/select file help to anyone interested in customizing their presentation of the rec.radio.* newsgroups

I would be particularly interested in mentoring/training new FAQ/Info maintainers for the rec.radio.* newsgroups (see also Jack Hill and John Seney for FAQ maintenance opportunities and the rec.radio.amateur.* Working Group mailing list). To paraphrase Zack Lau, I can't post it all myself!

I have taken over maintenance of the Perl-based auto-faq FAQ management and posting package from Ian Kluft and would be happy to guide new FAQ authors in its use. The latest version, 3.2pl2, is available via anonymous FTP from:

ftp://ftp.novia.net/customers/pschleck/auto-faq/

The auto-faq-users mailing list has also been re-sited at Novia. To subscribe, send E-mail to auto-faq-users-request@novia.net

with:

subscribe auto-faq-users

in the message body. An acknowledgment message will follow shortly. To unsubscribe, replace the above command with:

unsubscribe auto-faq-users

Recently I undertook some academic research into packet radio using KA9Q's Multiple-Access/Collision Avoidance (MACA) link-layer protocol.

I attempted a literature survey as well as some software simulations of the protocol (with varying degrees of success). I would welcome any opportunities to improve on my work, find out about any actual MACA implementations, share information, and build on my bibliography (available on request). More information about MACA may be obtained from:

http://www.novia.net/~pschleck/wireless.html

Courage Center
HANDI-HAM System
3915 Golden Valley Rd.
Golden Valley, MN 55422
USA

Manager, Courage HANDI-HAM System

I have information pertaining to Amateur Radio and physical disabilities or sensory impairments, such as blindness.

Visit us on the World-Wide Web:

http://www.mtn.org/handiham/

HELP WANTED: READERS NEEDED BY HANDI-HAMS

The Courage HANDI-HAM Center needs volunteer readers to record ham radio books and publications on audio tape. Volunteer readers provide a valuable service to persons with severe physical disabilities and sensory impairments who cannot use regular printed books.

Volunteers should hold an Amateur Radio license and be familiar with hobby terms and expressions. A clear speaking voice and the ability to read the written text of Amateur Radio books and describe the diagrams and pictures are essential.

HANDI-HAMS will provide a tech sheet and a sample tape to new volunteers, as well as a copy of the book to be read and cassette master tapes. Readers will need a good-quality cassette tape recorder and a quiet place to record. Some of the books we would ask readers to tape would be ARRL license manuals, special interest Amateur Radio books, and instruction manuals for radios.

This volunteer work can be done in one's own home, at one's own pace, as long as there is a quiet place to read. It is a wonderful way to share Amateur Radio with others!

AA9PW Amateur Radio Exam Practice World-Wide Web Page:

http://www.biochem.mcw.edu/Postdocs/Simon/radio/exam.html

This WWW site allows users to practice for the US Amateur Radio examinations on-line. The written examinations for all five classes, novice through extra, can be generated complete with figures, filled in on-line, and then graded. The results are presented question-by-question, and also graphically by subelement, so that users can identify areas which require further study.

More advanced options include saving the results of each examination a user takes on-line. These results can be used to monitor progress and also as a basis for generating exams tailored to a user's needs, ensuring that all questions are practiced.

Exams can also be generated and E-mailed to users without WWW access:

Send E-mail to exams@eeyore.biochem.mcw.edu with a line in the body of the message like:

generate novice

This will result in a novice exam being generated and E-mailed back to you with the answers included at the end of the E-mail. These exams lack the figures, so reference to a printed copy is advised! Simply replace "novice" with any of the other exam names (technician, general, advanced or extra) to get the other exams. To request multiple exams in one E-mail, write multiple "generate" lines.

Other exam resources such as the question pools, copies of the exam figures, and FCC Part 97 are also available. A comprehensive help page exists to guide users through the facilities of the site. All

questions and queries are welcome!

This message does not constitute any official or unofficial statement or
policy of American Turnkey or any other organization, corporation or
institution.

I just upgraded to Advanced, and am now working on Extra. Was first
licensed about ten months ago.

What I've learned:

1. How to operate HF from your apartment without being evicted
2. How to pass tests, both written and code
3. How to make a virtue out of the necessity of your limited
equipment, and enjoy the process while doing it

I operate CW HF exclusively. The only time I get to operate is when
the baby is asleep, so the XYL demands silent running. Besides, with
my wimpy wire, there is little point in trying to run voice.

ARRL Official Emergency Station (OES) and Local Government Liaison

I have experience with antennas (calculations, construction, and repair), all HF digital modes (including HF FAX), wiring of TNC's to radios, custom switchboxes for TNC's, radio modifications, math calculations, personal computers (DOS, Windows, Networking, and HTML), and of course, on-the-air operation and CW. I would love to work with young students wanting to become hams. I hope I can help.

I am currently a mature student at King's College, University of Aberdeen, studying for the B.Sc. (Hons.) Computing Science. I enter the third year of this course on 25th September 1997.

I run a telephone BBS in the Fidonet network. This is currently offline due to problems with the telephone line, but is expected to be back up in late September of 1997.

I also have my own IBM compatible computer, which has a P166 processor, 32M of RAM and a total of 4.6G of hard drive space, spread

between three EIDE hard drives. This computer normally runs under the Linux operating system, and I am gradually moving the above Fidonet BBS system across from MSDOS to Linux. Because of the lack of suitable software under Linux, I am writing one myself, having had 15 years experience as a professional programmer.

I am a regular participant in AuroraMUSH, a MultiUser system, and have authored several patches to the suftware controlling it. It may be visited at:

telnet://amush.ml.org:4190/

I have been involved with Packet radio for over a decade now. Indeed, it was packet radio that got me interested in Amateur Radio in the first place.

I started up a mailing list connected with the Amateur Satellite world, currently using manual subscriptions. The list is:

Space.Repeater@cus.umist.ac.uk

and is for the discussion of the possibility of placing an amateur band repeater or transponder in orbit around a planet other than Earth, or on the surface of one of the other planets.

I will add that, although I can claim to be something of an expert on both Linux and Packet Radio, I am definitely NOT an expert on the two together.

Paul Williamson KB5MU

kb5mu@amsat.org

I'm not the author of InstantTrack itself, but I was extensively involved in its testing. I'm the author of OrbitDRV (the tracking TSR that comes with InstantTrack) and a number of other InstantTrack auxiliary programs.

AMSAT-NA (The Radio Amateur Satellite Corporation in North America) operates the Internet host AMSAT.ORG to provide for efficient communications between people interested in the amateur satellite program. At this time two services are provided: a message remailing service and a mailing list service.

In addition, the AMSAT World-Wide Web home page provides interactive access to a variety of information related to the amateur radio satellite program. Use your Web browser program (e.g., Mosaic) to access the URL:

http://www.amsat.org/

Anonymous FTP is available from:

ftp://ftp.amsat.org/amsat/

This archive contains much of the same information as the WWW server. In addition, various files and programs are available for anonymous FTP. This is a relatively new archive, so the older FTP site:

ftp://ftp.ucsd.edu/hamradio/

still has lots of files not available there.

The message remailing service permits users to send each other mail on the Internet without keeping track of each other's Internet address. The remailing service allows each user to receive mail sent to the address callsign@amsat.org, where callsign is that user's amateur radio callsign, or other unique identifier. Mail sent to that address will be routed first to the AMSAT.ORG host at UCSD in San Diego, then remailed from AMSAT.ORG to the network address specified by the user. In most cases, this process delays the message by only a very few minutes. The mailing list service groups subscribers into mailing lists to receive certain types of messages. There are public mailing lists available to anyone, and private mailing lists available only to certain people (for example, AMSAT Board of Directors members or PACSAT command stations). Currently the following public mailing lists exist:

ANS - AMSAT News Service

This mailing list carries official news releases from the AMSAT News Service. These messages are posted in a form suitable for direct posting to a packet radio BBS system. Each message contains a Bulletin Identifier (BID), which permits the message to be introduced into the packet network at many places without resulting in duplicate bulletins at any BBS. The primary purpose of this mailing list is to distribute ANS bulletins for redistribution (via the packet net or on AMSAT voice nets), but individuals may also subscribe for their own use. If your local packet BBS doesn't seem to get the ANS bulletins reliably, you are encouraged to post the ANS bulletins yourself.

Only authorized AMSAT News Service personnel should send messages to the ANS mailing list.

AMSAT-BB - AMSAT bulletin board

This mailing list carries general AMSAT information. This information may NOT be suitable in content for transmission via amateur radio, so automatic reposting of AMSAT-BB messages to packet radio BBS's is discouraged. The purpose of this mailing list is to provide a forum for general discussion of any satellite-related topic.

Anyone may send messages to the AMSAT-BB mailing list. Simply address your message to amsat-bb@amsat.org, and it will be automatically forwarded to all subscribers to the AMSAT-BB mailing list.

Editors of publications should ask permission of the sender before publishing anything seen in AMSAT-BB elsewhere, unless the posting was obviously a public press release. However, posters should realize that

anything posted to AMSAT-BB is essentially public.

KEPS - Keplerian Elements mailing list

This mailing list carries official postings of Keplerian element sets for satellites of interest to radio amateurs. Like the ANS bulletins, these messages are posted in a form suitable for direct posting to a packet radio BBS.

Only authorized AMSAT News Service personnel should send messages to the KEPS mailing list.

NASAINFO - NASA related information mailing list

This mailing list contains information about current and planned NASA space missions. Be forewarned: at times this mailing list delivers many large messages.

SAREX - Shuttle Amateur Radio Experiment mailing list

This mailing list contains information and press releases pertaining to SAREX missions.

To obtain any of these services, just send a message to the address

listserv@amsat.org

This address may be reached from CompuServe MAIL as:

>INTERNET:listserv@amsat.org

For the moment, the maintenance of the AMSAT.ORG mailing lists and remailing aliases is done manually. Later, this service will probably be automated and you will have to follow a strict message format. For now, you may send requests in free format. They will usually be processed within a few days. In general, you will not receive an explicit reply to your request. Be sure you specify:

1. Which mailing list(s) you want to receive
2. Your callsign, if any
3. The Internet address to be used, if different from the one in your From: header.

You should not send messages about your subscriptions to any of the mailing lists. Send them to listserv@amsat.org instead. This includes questions, requests for changes, requests for information about mailing services, and complaints.

The list of amateurs who may be reached via the message remailing service may be obtained by requesting the "address book". Note that the address book as distributed contains only the callsigns of the available addressees, not their actual Internet addresses. The address book is updated occasionally, and does not necessarily contain the very latest information.

You may request to be added to the list, to be deleted from the list, or to have your Internet address changed on the list. Please include your callsign if you have one. If you don't have a callsign, that's OK, but please say so. If you have more than one Internet address you want to have available on the AMSAT.ORG remailer, you may so specify. For instance, if you have a regular Internet address and a CompuServe account, you may appear in the address book as both w1xyz and w1xyz-cis. Mail sent to w1xyz would go to your Internet address, and mail sent to w1xyz-cis would go to CompuServe. MCImail accounts have the form w1xyz-mci, and so on.

You may also subscribe or unsubscribe to any of the public mailing lists described above. Send a message to listserv@amsat.org, specifying clearly which mailing list(s) you want to add or drop, and giving your callsign if you have one. When you subscribe to a mailing list, you will automatically be added to the remailing service as well, because the mailing lists are maintained by callsign. If you have more than one address listed in the remailing service, please indicate which one(s) you want the mailing list messages sent to.

Additional mailing lists, public or private, can be set up as needed. Send mail to listserv@amsat.org for details.

Questions about any service offered by AMSAT.ORG may be directed to listserv@amsat.org as well.

Please note that the AMSAT business office is separate from mailing list maintenance. You may address membership requests to martha@amsat.org, or send them by mail, phone, or fax to AMSAT headquarters:

Amateur Radio: Elmers List Info and Administrivia

This administrivia file and the companion Amateur Radio Elmers Resource Directory are intended for non-commercial distribution via the Internet. Any other uses, please E-mail for permission.

Table of Contents

* Elmers List Formatting Standards
* A Brief Historical Overview
* What is an Elmer?
* What is an Elmer Today?
* How do I become an Internet Elmer?
* How may I obtain the latest copy of the Elmers List?
* Acknowledgements

Elmers List Formatting Standards

In order to standardize the Internet resource notation used in this Directory, I've decided to adopt Uniform Resource Locator (URL) format throughout. In addition to being a straightforward, human-readable, format for specifying File Transfer Protocol (FTP) archives, Gopher and World-Wide Web (WWW) servers, and Usenet newsgroups, it is also amenable to formatting as hypertext links in Hypertext Markup Language (HTML). For example, users viewing this document at designated World-Wide Web Servers (see "How may I obtain the latest copy of the Elmers List?" below) will see all URL's converted to hypertext links on their WWW client. Rather than fumbling with the various conventions of FTP, Gopher, WWW, and Usenet News software, the document or directory referenced by a hypertext link is but one mouse-click (or key-click) away.

While I'm happy to incorporate the latest and most popular information-formatting standards into the documents that I maintain, I really can't allow myself to be dragged into the role of a WWW help-desk for all of the Internet. Please understand this when I

politely refer you to other Elmers, easily-obtainable on-line documentation, or even local expertise such as resident gurus, consultants, or help-desks at your school, company, or information service provider.

The URL format is easily mapped into human FTP, Telnet, Gopher, and Usenet News reader commands. For example:

ftp://ftp.cs.buffalo.edu/pub/ham-radio/README

Anonymous FTP to ftp.cs.buffalo.edu and get the file README under the /pub/ham-radio directory.

gopher://oes1.oes.ca.gov:5555/

Access the Gopher root page at oes1.oes.ca.gov via non-standard port 5555 (if the standard Gopher port of 70 was used, the ":5555" part would be replaced by ":70" or most likely not appear at all).

telnet://callsign.cs.buffalo.edu:2000/

Initiate a Telnet (remote terminal) session with callsign.cs.buffalo.edu via non-standard port 2000 (if the standard Telnet port of 23 was used, the ":2000" part would be replaced by ":23" or most likely not appear at all).

news:rec.radio.info

Access the rec.radio.info newsgroup on your Usenet newsreader from your local news server.

URL's that start with:

http:

Are only accessible via WWW client software or "browsers".

For more information about URL formats, see:

http://www.w3.org/hypertext/WWW/Addressing/Addressing.html

Disclaimer: While I have personally confirmed the accuracy of all URL's through the Lynx WWW client, any referenced documents external to this document are subject to future changes beyond my control. In addition, with networks and their administration being what it is, many services with up-to-date URL's may be temporarily unreachable. Please consult with your local gurus, consulting staff, or help-desk to confirm that it's a non-local problem, then ask the Elmer him or herself (me in the case of URL's which appear outside of individual entries). The currency and accuracy of URL's should be at least no worse than that of the Elmers entries themselves (which are each individually confirmed by me every 2 years, and updated within 1 month on request of the Elmer).

A Brief Historical Overview

If there is any one constant in the changing state of the communications art, it is that "Hams" (Amateur Radio Operators) have always been on the forefront of it. Rumors abound where the term "Ham" came from. Some of the more amusing are described in the list of Frequently Asked Questions for this newsgroup.

Regardless of origin of the name, a "Ham" is universally recognizable as one who experiments in radio and communications.

Whether it be constructing a low-power CW radio with vacuum tubes, or designing TCP/IP packet networks, such experimentation has historically spilled over into the mainstream such as was the case with Howard Armstrong, who developed the regenerative oscillator and FM radio, or General Curtis E. LeMay (K0GRL, W6EZV) who was instrumental in making Single-Sideband the communications standard for the Strategic Air Command (1946-1992, now reorganized into a joint command called USSTRATCOM) and eventually the U.S. Air Force. Although packet-switching techniques originated from DARPA (Defense Advanced Research Projects Agency) and the ARPANet, no one can deny the tremendous influence that amateurs, including those within TAPR (Tucson Amateur Packet Radio), have had in demonstrating the viability of TCP/IP and AX.25 communications via radio links. The efforts of AMSAT (the Amateur Satellite Corporation), including the development of many ham satellites and the low-orbiting Microsats (communications satellites no bigger than a breadbox that use store-and-forward packet techniques), have certainly advanced the state-of-the-art in communications, one of the defined purposes of the Amateur Radio Service, as recognized by international treaty.

What is an Elmer?

Since in many cases hams are writing "the book", there is often no "book" or other established reference for a beginner to refer to. Traditionally, information has been passed on from ham to ham via word-of-mouth. Like many of the traditional crafts, a variation of the Master-Apprentice system has emerged, the Elmer-Novice relationship. Called "Elmers" because they are usually older and wiser, having the benefit of many years in the hobby, including several failed projects, and an electric shock or two, they have traditionally been the mainstay of amateur radio, and the source of many new hams, particularly those interested in working on emerging technologies.

Even more importantly, Elmers provided an outlet for the impatient newcomer who wanted "to know everything, and right away." Faced with such a request, a good Elmer will smile and proceed to lead the novice through some project or operating experience. Several hours, days, or weeks later, the novice would have his answers, but would have earned them. Even better, the sense of accomplishment would boost the novice's confidence and nudge him or her down the road to being a model, experienced ham operator.

Many present hams feel that such an experience is missing today. In today's hustle-bustle world, the response to such natural curiosity and desire to learn is, more often than not, "I'm too busy" or "RTFM." As a result, the quality of new hams declines and the knowledge and operating habits they develop in their first formative months and years leave much to be desired. And the very same hams who claim that they "can't understand the new generation" also, in almost the same breath, lament about the "decline of amateur radio."

What is an Elmer Today?

An Elmer today is of any age, male or female, who has some expertise and is willing to share it with beginners. Elmers don't even need to be licensed amateurs, just people with knowledge in some area of electronics or communications technology.

How do I become an Internet Elmer?

With the ever-widening scope of the Internet, the amateur radio newsgroups on Usenet, and now the World-Wide Web, the potential for Elmers to share their knowledge to a wide audience has never been greater. To that end, I maintain a list of such Elmers. Volunteers may register via my formatted, on-line, World-Wide Web Registration Form:

http://www.novia.net/~pschleck/elmers/register.html

I would prefer that you register using the above form (which not only ensures that nothing is omitted, but also makes adding your entry much easier by automatically converting it to HTML). However, volunteers who are not yet on the Web are also quite welcome, and may register by writing me at elmers-request@novia.net with their name, amateur radio callsign(s) (if any), E-mail address, and area(s) of expertise. URL-format pointers to resources they maintain, such as WWW home pages, FTP archives, mail servers, or mailing lists, would also be quite welcome. The list has gotten large enough that there should be plenty of suitable examples to model your entry after. If you need some further assistance formatting your entry, drop me a line and tell me a bit about yourself. Ironically, sometimes the best Elmers write to me saying, "I'm not an expert, but..."

I have set up an administrivia mailbox for correspondence related to this list (elmers-request@novia.net, the default Reply-To: of this message when posted to Usenet News). I would prefer that all such correspondence be directed to that address. In addition to saving it into a special folder, my incoming E-mail filter will also send you an automated return-receipt.

Also, an unfortunate increase in the amount of unsolicited junk-mail that I receive (often dozens of messages _every day_) has forced me to become much more ruthless about filtering incoming E-mail. While I can guarantee that I will read all mail sent to elmers-request before the next month's posting of the list, mail sent to pschleck may not only

not get reviewed for some time, my incoming mail filter (procmail) may even throw it away if it can't be automatically categorized as originating from known, friendly senders or have known, welcome keywords in the headers ("Elmer" is obviously one of those keywords).

Those desiring a more extensive list, or who need more specific assistance, are encouraged to contact Rosalie White, WA1STO, Educational Services Manager at the American Radio Relay League, 225 Main St., Newington, CT 06111 or via electronic mail addressed to rwhite@arrl.org.

How may I obtain the latest copy of the Elmers List?

There are currently 6 ways of obtaining the Elmers List. Any site at least reachable by Internet E-mail can use the Mailing-List or Mail-Server options:

World-Wide Web (WWW):

This is the recommended method for accessing the Elmers list, as it allows this resource to be viewed as hypertext. The home site at www.novia.net features immediate updates each month, hypertext-linked subject and geographic indexes, keyword searching, and registration and feedback forms. The other two sites use automatically-converted versions of the Usenet news articles, but are still usable, particularly if you are outside North America. The site marked with an asterisk also offers Wide-Area Information Service (WAIS) index searching by keyword for all Usenet News FAQ's:

* http://www.novia.net/~pschleck/elmers/
* http://www.lib.ox.ac.uk/internet/news/faq/rec.radio.amateur.misc.html
* http://www.cs.ruu.nl/cgi-bin/faqwais *

(_Note:_ Because of maintenance problems - FAQ documents not being promptly updated in particular - the sites at Ohio State and Smart Pages are no longer recommended for accessing a current copy of the Elmers List and have been removed from the above list.)

see also the newsgroups under comp.infosystems.www.* (I haven't listed URL's for all of the newsgroups under this hierarchy as there are now about a dozen of them (!!!).)

Usenet News:

This was the original distribution medium for the Elmers list. It continues to be supported for users who cannot access the World-Wide Web. Since the document uses URL's throughout, the news article version may also be viewed as hypertext via some mail and news readers. The latest copy of the list can be found in the news articles with the Subjects of _"Amateur Radio: Elmers Resource Directory [A-*]," "Amateur Radio: Elmers Resource Directory [*-*],"_ and

"Amateur Radio Elmers Resource Directory [*-Z]" (The * represents a wildcard character, as the need to split the list evenly, as well as keep all parts under the 64K message limit for Usenet, requires that I adjust the split occasionally). Since the list is cross-posted to the following newsgroups:

* news:rec.radio.amateur.misc
* news:rec.radio.info
* news:rec.answers
* news:news.answers

on the first Monday of each month, with an expiration date 6 weeks into the future, there should always be a copy available at most news sites. Check your newsreader documentation for information about reading previously-read articles or articles that are "threaded" to this one. Also complain to your local news administrator (E-mail to "news" or "usenet" on your local host) if your local news server is configured to ignore Expires headers (and thus prematurely delete the articles) in worthwhile, mostly moderated, information newsgroups like those listed above.

Anonymous FTP:

If your site is directly connected to the Internet, you may retrieve the latest copy via File Transfer Protocol (FTP) from the following sites:

* ftp://ftp.novia.net/customers/pschleck/elmers/
* ftp://ftp.cs.buffalo.edu/pub/ham-radio/
* ftp://rtfm.mit.edu/pub/usenet/news.answers/radio/ham-radio/elmers/
* ftp://ftp.uu.net/usenet/news.answers/radio/ham-radio/elmers/

Internet Gopher:

The latest copy of the list should be available from the following Gopher sites:

* gopher://jupiter.sun.csd.unb.ca/
* gopher://gopher.univ-lyon1.fr/
* gopher://ftp.win.tue.nl/
* gopher://gopher.win.tue.nl/

see also news:comp.infosystems.gopher

Mailing-List:

Since the list is cross-posted to rec.radio.info, the latest copy may be obtained from the mailing-list gateway for that newsgroup (along with many other informational articles about radio) when it is published each month. To subscribe, send E-mail to:

listserv@ucsd.edu

and in the BODY (not the Subject) of the message, write:

subscribe radio-info

The server may not be able to determine your return address. In that case write:

subscribe radio-info (your E-mail address)

You should get an acknowledgement very shortly.

Mail-Server:

If you don't want to read through the entire gateway of rec.radio.info, or want a copy of the list right away, send E-mail to:

ftpmail@ftp.novia.net

and in the BODY (not the Subject) of the message, write:

```
open
get /customers/pschleck/elmers/README
get /customers/pschleck/elmers/index/subject
get /customers/pschleck/elmers/index/geographic
get /customers/pschleck/elmers/list/part1
get /customers/pschleck/elmers/list/part2
get /customers/pschleck/elmers/list/part3
get /customers/pschleck/elmers/list/part4
get /customers/pschleck/elmers/list/part5
get /customers/pschleck/elmers/diff
```

Alternatively, send E-mail to:

mail-server@rtfm.mit.edu

and in the BODY (not the Subject) of the message, write:

```
send usenet/news.answers/radio/ham-radio/elmers/README
send usenet/news.answers/radio/ham-radio/elmers/index/subject
send usenet/news.answers/radio/ham-radio/elmers/index/geographic
send usenet/news.answers/radio/ham-radio/elmers/list/part1
send usenet/news.answers/radio/ham-radio/elmers/list/part2
send usenet/news.answers/radio/ham-radio/elmers/list/part3
send usenet/news.answers/radio/ham-radio/elmers/list/part4
send usenet/news.answers/radio/ham-radio/elmers/list/part5
send usenet/news.answers/radio/ham-radio/elmers/diff
```

and the latest copy of the list should be sent to you E-mail within 24 hours (the mail-server uses batch priority to reduce system demand).

Acknowledgements

By using this resource, you are benefitting the net by obtaining assistance in the fastest and most efficient way possible. By volunteering to appear on this list, you are contributing to the good reputation of the radio-related newsgroups.

Thanks to all the volunteer Elmers, as well as courteous list users,
for making this service a success.

1971. TRADE Uniden/Bearcat BC-200XLT plus $$$ for YAESU FT-50RH

Newsgroup: rec.radio.amateur.misc
Date: 1997-11-03 00:00:00 UTC
From: mrusso@hoflink.com
Message-ID: <345e617d.5956176@news.hoflink.com>
Source record: 187538
Cross-posted to: rec.radio.amateur.misc,rec.radio.swap,rec.radio.amateur.equipment,rec.radio.scanner,alt.radio.scanner

Hi to all, I have a Uniden/ Bearcat BC-200XLT scanner that receives
full cellular also the cordless phone frequencies. The 200XLT is in
very good condition. It has 200 memory channels, leather case, manual
and a good battery pack with charger.
I have seen this scanner on the newsgroups for 200 dollars.
I would like to trade for a Yaesu FT-50R with FTT-12 keypad
(if possible). The FT-50R must be in good working order on both
VHF and UHF bands. It can be cosmetically challanged as long as it is
FULLY functionaI. I will balance the deal with cash if need be. How
much cash depends on the condition of the FT-50R.

NOTE It may be illegal to receive cellular in your area.

Please e-mail me direct at: mrusso@hoflink.com
Thanks, Mark N2FLF

>12 wpm.

true. 1000W HF max power output for 12 wpm, but you will get full
access to HF with 9 wpm (but you are limited to 200W max).

1974. Anyone have tried ICOM PCR-1000 or WiNRADIO 1000 or 3000 DSP ?

Newsgroup: rec.radio.amateur.misc
Date: 1997-11-03 00:00:00 UTC
From: me <dontspam@myaddress.com>
Message-ID: <345E330E.D97C8343@myaddress.com>
Source record: 187541

Anyone have tried ICOM PCR-1000 or WiNRADIO 1000 or 3000 DSP ?
I would like to use it for both audio and packet.
I am new to this so I may say stupid things. Is it possible to receive packet data directly or I will need a dedicated TNC like the MFJ-1278B with DSP that works with all packet modes. I am looking for KISS TCP/IP.

Also I am looking for the ICOM 706 Mk II transceiver. So is it possible to integrate the whole setup to a single computer, for both voice and packet?

Thanx in advance for any help

1975. @@@ License System Suggestion FINAL @@@

Newsgroup: rec.radio.amateur.misc
Date: 1997-11-03 00:00:00 UTC
From: webmaster@radiotelephone.net.ham
Message-ID: <345e3b9b.1403681@news.total.net>
Source record: 187542
Cross-posted to: rec.radio.amateur.misc,rec.radio.amateur,rec.radio.amateur.policy,rec.radio.scanner,alt.radio.scanner

This is a final version of my suggestion for a new licensing system
(all countries):

Temporary Guest Permit (two weeks special permit, no tests required.
no renewals):

What you can do:
- Cannot set up own station
- Callsign will not be issued (but permits guest operation)
- Privilege same as "Basic"

Basic

Exam contents:
- International Regulations
- Q-Codes
- Phenotics
- How to make contacts (called station and then calling
station etc.)
- Equipment Operating Procedures

Priviledges:
- Maximum Power Output 50W
- Under 4 MHz, Above 28 MHz & All modes except CW mode

General

Exam contents:
- The things required in "Basic"
- Basic electronic theory, components of transmitters,
receivers etc.

Priviledges:
- Maximum Power Output 200W
- Under 10 MHz, Above 24 MHz & All modes except CW mode
- Club Station

Advanced

Exam contents:
- The things required in "Advanced"
- Advanced electronic theory

Priviledges:
- Maximum Power Output 1000W

- Full Access except 10.100 MHz -10.150 MHz & All modes except
CW mode
- Club Station
- Repeater

5 wpm (must hold basic, general or advanced)

Exam content:
- 5 wpm receiving

Priviledges:
- CW Mode Operation

10 wpm (must hold basic, general or advanced)

Exam content:
- 10 wpm receiving

Priviledges:
- 10.100 MHz - 10.150 MHz
- CW Mode Operation

1977. Problem with FT-8100

Newsgroup: rec.radio.amateur.misc
Date: 1997-11-03 00:00:00 UTC
From: Bill Richards <werich@qnet.com>
Message-ID: <345E679E.D256842E@qnet.com>
Source record: 187544

I am hoping someone might be able to assist me
with a problem that just
surfaced with my FT-8100. I am not able to adjust
the volume on the right
side of the radio (440 side). The volume control
knob moves smoothly but
the volume does not change either up or down. The
left side performs normally.
I checked with Yeasu and they said send it in, it
is still under warrenty. But
turnaround time is about 3 weeks. Any suggestions
would be greatly appreciated.
Thanks, and have a great day.

I understand that my posting was posted a few times
but when I sent the first one and the ones that followed
I thought that they were not getting posted because there
was a problem. When I saw it was posted a bunch of times I tried
to delete the extra messages, but to no avail.
This is not the first time I've posted. Problems DO happen.
To those few who are offended, well, I'm sorry
To the rest of the world, thanks for understanding.
73, Mark

- --- BEGIN Linux AX25 HOWTO part 1/3 ---

Linux AX25-HOWTO, Amateur Radio.
Terry Dawson, VK2KTJ, terry@perf.no.itg.telstra.com.au
v1.5, 17 October 1997

The Linux Operating System is perhaps the only operating system in the
world that can boast native and standard support for the AX.25 packet
radio protocol utilised by Amateur Radio Operators worldwide. This
document aims to describe how to install and configure this support.

1. Introduction.

This document was originally an appendix to the HAM-HOWTO, but grew
too large to be reasonably managed in that fashion. This document
describes how to install and configure the native AX.25, NetRom and
Rose support for Linux. A few typical configurations are described
that could be used as models to work from.

The Linux implementation of the amateur radio protocols is very
flexible. To people relatively unfamiliar with the Linux operating
system the configuration process may look daunting and complicated. It
will take you a little time to come to understand how the whole thing
fits together. You will find configuration very difficult if you have
not properly prepared yourself by learning about Linux in general. You
cannot expect to switch from some other environment to Linux without
learning about Linux itself.

1.1. Changes from the previous version

Additions:
Joerg Reuters Web Page
"More Information" section
ax25ipd configuration.

Corrections/Updates:
Changed pty's to a safer range to prevent possible conflicts
```

Updated module and ax25-utils versions.

ToDo:
Fix up the SCC section, this is probably wrong.
Expand on the programming section.

1.2. Where to obtain new versions of this document.

The best place to obtain the latest version of this document is from a Linux Documentation Project archive. The Linux Documentation Project runs a Web Server and this document appears there as the AX25-HOWTO <http://sunsite.unc.edu/LDP/HOWTO/AX25-HOWTO.html>. This document is also available in various formats from the sunsite.unc.edu ftp archive <ftp://sunsite.unc.edu/pub/Linux/docs/howto/>.

You can always contact me, but I pass new versions of the document directly to the LDP HOWTO coordinator, so if it isn't there then chances are I haven't finished it.

1.3. Other related documentation.

There is a lot of related documentation. There are many documents that relate to Linux networking in more general ways and I strongly recommend you also read these as they will assist you in your efforts and provide you with stronger insight into other possible configurations.

They are:

The HAM-HOWTO <http://sunsite.unc.edu/LDP/HOWTO/HAM-HOWTO.html>,

the NET-3-HOWTO <http://sunsite.unc.edu/LDP/HOWTO/NET-3-HOWTO.html>,

the Ethernet-HOWTO <http://sunsite.unc.edu/LDP/HOWTO/Ethernet-HOWTO.html>,

and:

the Firewall-HOWTO <http://sunsite.unc.edu/LDP/HOWTO/Firewall-HOWTO.html>

More general Linux information may be found by reference to other Linux HOWTO <http://sunsite.unc.edu/LDP/HOWTO/> documents.

2. The Packet Radio Protocols and Linux.

The AX.25 protocol offers both connected and connectionless modes of operation, and is used either by itself for point-point links, or to carry other protocols such as TCP/IP and NetRom.

It is similar to X.25 level 2 in structure, with some extensions to make it more useful in the amateur radio environment.

The NetRom protocol is an attempt at a full network protocol and uses AX.25 at its lowest layer as a datalink protocol. It provides a network layer that is an adapted form of AX.25. The NetRom protocol

features dynamic routing and node aliases.

The Rose protocol was conceived and first implemented by Tom Moulton W2VY and is an implementation of the X.25 packet layer protocol and is designed to operate with AX.25 as its datalink layer protocol. It too provides a network layer. Rose addresses take the form of 10 digit numbers. The first four digits are called the Data Network Identification Code (DNIC) and are taken from Appendix B of the CCITT X.121 recommendation. More information on the Rose protocol may be ontained from the RATS Web server <http://www.rats.org/>.

Alan Cox developed some early kernel based AX.25 software support for Linux. Jonathon Naylor <g4klx@g4klx.demon.co.uk> has taken up ongoing development of the code, has added NetRom and Rose support and is now the developer of the AX.25 related kernel code. DAMA support was developed by Joerg, DL1BKE, jreuter@poboxes.com. Baycom and SoundModem support were added by Thomas Sailer, <sailer@ife.ee.ethz.ch>. The AX.25 utility software is now maintained by me.

The Linux code supports KISS based TNC's (Terminal Node Controllers), the Ottawa PI card, the Gracilis PacketTwin card and other Z8530 SCC based cards with the generic SCC driver and both the Parallel and Serial port Baycom modems. Thomas's new soundmodem driver supports Soundblaster and soundcards based on the Crystal chipset.

The User programs contain a simple PMS (Personal Message System), a beacon facility, a line mode connect program, `listen' an example of how to capture all AX.25 frames at raw interface level and programs to configure the NetRom protocol. Included also are an AX.25 server style program to handle and despatch incoming AX.25 connections and a NetRom daemon which does most of the hard work for NetRom support.

2.1. How it all fits together.

The Linux AX.25 implementation is a brand new implementation. While in many ways it may looks similar to NOS, or BPQ or other AX.25 implementations, it is none of these and is not identical to any of them. The Linux AX.25 implementation is capable of being configured to behave almost identically to other implementations, but the configuration process is very different.

To assist you in understanding how you need to think when configuring this section describes some of the structural features of the AX.25 implementation and how it fits into the context of the overall Linux structure.

Simplified Protocol Layering Diagram

```
-----------------------------------------------
| AF_AX25 | AF_NETROM | AF_INET | AF_ROSE |
|=========|===========|=============|=========|
| | | | |
| | | TCP/IP | |
```

```
| | ---------- | |
| | NetRom | | Rose |
| ------------------------------------
| AX.25 |
-----------------------------------------
```

This diagram simply illustrates that NetRom, Rose and TCP/IP all run directly on top of AX.25, but that each of these protocols is treated as a seperate protocol at the programming interface. The `AF_' names are simply the names given to the `Address Family' of each of these protocols when writing programs to use them. The important thing to note here is the implicit dependence on the configuration of your AX.25 devices before you can configure your NetRom, Rose or TCP/IP devices.

Software module diagram of Linux Network Implementation

```
-------------------------------------------------------------------------
User | Programs | call node || Daemons | ax25d mheardd
| | pms mheard || | inetd netromd
-------------------------------------------------------------------------
| Sockets | open(), close(), listen(), read(), write(), connect()
| |-----------------------------------------------
| | AF_AX25 | AF_NETROM | AF_ROSE | AF_INET
|---------------------------------------------------------------
Kernel | Protocols | AX.25 | NetRom | Rose | IP/TCP/UDP
|---------------------------------------------------------------
| Devices | ax0,ax1 | nr0,nr1 | rose0,rose1 | eth0,ppp0
|---------------------------------------------------------------
| Drivers | Kiss PI2 PacketTwin SCC BPQ | slip ppp
| | Soundmodem Baycom | ethernet
-------------------------------------------------------------------------
Hardware | PI2 Card, PacketTwin Card, SCC card, Serial port, Ethernet Card
-------------------------------------------------------------------------
```

This diagram is a little more general than the first. This diagram attempts to show the relationship between user applications, the ker- nel and the hardware. It also shows the relationship between the Socket application programming interface, the actual protocol modules, the kernel networking devices and the device drivers. Anything in this diagram is dependent on anything underneath it, and in general you must configure from the bottom of the diagram upwards. So for exam- ple, if you want to run the call program you must also configure the Hardware, then ensure that the kernel has the appropriate device driver, that you create the appropriate network device, that the ker- nel includes the desired protocol that presents a programming inter- face that the call program can use. I have attempted to lay out this document in roughly that order.

3. The AX.25/NetRom/Rose software components.

The AX.25 software is comprised of three components, the kernel source, the network configuration tools and the utility programs.

The version 2.0.xx Linux kernels include the AX.25, NetRom, Z8530 SCC, PI card and PacketTwin drivers by default. These have been significantly enhanced in the 2.1.* kernels. Unfortunately, the rest of the 2.1.* kernels makes them fairly unstable at the moment and not a good choice for a production system. To solve this problem Jonathon Naylor has prepared a patch kit which will bring the amateur radio protocol support in a 2.0.28 kernel up to the standard of the 2.1.* kernels. This is very simple to apply, and provides a range of facilities not present in the standard kernel such as Rose support.

3.1. Finding the kernel, tools and utility packages.

3.1.1. The kernel source:

The kernel source can be found in its usual place at: ftp.kernel.org

/pub/linux/kernel/v2.0/linux-2.0.31.tar.gz

The current version of the AX25 upgrade patch is available at: ftp.pspt.fi

/pub/linux/ham/ax25/ax25-module-14e.tar.gz

3.1.2. The network tools:

The latest alpha release of the standard Linux network tools support AX.25 and NetRom and can be found at: ftp.inka.de

/pub/comp/Linux/networking/net-tools/net-tools-1.33.tar.gz

The latest ipfwadm package can be found at: ftp.xos.nl

/pub/linux/ipfwadm/

3.1.3. The AX25 utilities:

There are two different families of AX25-utilities. One is for the 2.0.* kernels and the other will work with either the 2.1.* kernels or the 2.0.*+moduleXX kernels. The ax25-utils version number indicates the oldest version of kernel that they will work with. Please choose a version of the ax25-utils appropriate to your kernel. The following are working combinations. You must use one of the following combinations, any other combination will not work, or will not work well.

```
Linux Kernel AX25 Utility set
---------------------- -------------------------
linux-2.0.29 ax25-utils-2.0.12c.tar.gz **
linux-2.0.28+module12 ax25-utils-2.1.22b.tar.gz **
linux-2.0.30+module14c ax25-utils-2.1.42a.tar.gz
linux-2.0.31+module14d ax25-utils-2.1.42a.tar.gz
linux-2.1.22 ++ ax25-utils-2.1.22b.tar.gz
linux-2.1.42 ++ ax25-utils-2.1.42a.tar.gz
```

Note: the ax25-utils-2.0.* series (marked above with the '**' symbol) is now obsolete and is no longer supported. This document covers configuration using the versions of software recommended above the table. While there are differences between the releases, most of the information will be relevant to earlier releases of code.

The AX.25 utility programs can be found at: ftp.pspt.fi <ftp://ftp.pspt.fi/pub/linux/ham/ax25/>

or at: sunsite.unc.edu <ftp://sunsite.unc.edu/pub/Linux/apps/ham/>

4. Installing the AX.25/NetRom/Rose software.

To successfully install AX.25 support on your linux system you must configure and install an appropriate kernel and then install the AX.25 utilities.

4.1. Compiling the kernel.

If you are already familiar with the process of compiling the Linux Kernel then you can skip this section, just be sure to select the appropriate options when compiling the kernel. If you are not, then read on.

The normal place for the kernel source to be unpacked to is the /usr/src directory into a subdirectory called linux. To do this you should be logged in as root and execute a series of commands similar to the following:

```
# mv linux linux.old
# cd /usr/src
# tar xvfz linux-2.0.31.tar.gz
# tar xvfz /pub/net/ax25/ax25-module-14e.tar.gz
# patch -p0 </usr/src/ax25-module-14/ax25-2.0.31-2.1.47-2.diff
# cd linux
```

After you have unpacked the kernel source and applied the upgrade, you need to run the configuration script and choose the options that suit your hardware configuration and the options that you wish built into your kernel. You do this by using the command:

```
# make menuconfig
```

You might also try:

```
# make config
```

I'm going to describe the full screen method (menuconfig) because it is easier to move around, but you use whichever you are most comfortable with.

In either case you will be offered a range of options at which you must answer `Y' or `N'. (Note you may also answer `M' if you are using modules. For the sake of simplicity I will assume you are not, please make appropriate modifications if you are).

The options most relevant to an AX.25 configuration are:

```
Code maturity level options --->
...
[*] Prompt for development and/or incomplete code/drivers
...
General setup --->
...
[*] Networking support
...
Networking options --->
...
[*] TCP/IP networking
[?] IP: forwarding/gatewaying
...
[?] IP: tunneling
...
[?] IP: Allow large windows (not recommended if <16Mb of memory)
...
[*] Amateur Radio AX.25 Level 2
[?] Amateur Radio NET/ROM
[?] Amateur Radio X.25 PLP (Rose)
...
Network device support --->
[*] Network device support
...
[*] Radio network interfaces
[?] BAYCOM ser12 and par96 driver for AX.25
[?] Soundcard modem driver for AX.25
[?] Soundmodem support for Soundblaster and compatible cards
[?] Soundmodem support for WSS and Crystal cards
[?] Soundmodem support for 1200 baud AFSK modulation
[?] Soundmodem support for 4800 baud HAPN-1 modulation
[?] Soundmodem support for 9600 baud FSK G3RUH modulation
[?] Serial port KISS driver for AX.25
[?] BPQ Ethernet driver for AX.25
[?] Gracilis PackeTwin support for AX.25
[?] Ottawa PI and PI/2 support for AX.25
[?] Z8530 SCC KISS emulation driver for AX.25
...
```

The options I have flagged with a `*' are those that you must must answer `Y' to. The rest are dependent on what hardware you have and what other options you want to include. Some of these options are described in more detail later on, so if you don't know what you want yet, then read ahead and come back to this step later.

After you have completed the kernel configuration you should be able to cleanly compile your new kernel:

```
# make dep
# make clean
```

```
# make zImage
```

maake sure you move your arch/i386/boot/zImage file wherever you want it and then edit your /etc/lilo.conf file and rerun lilo to ensure that you actually boot from it.

4.1.1. A word about Kernel modules

I recommend that you don't compile any of the drivers as modules. In nearly all installations you gain nothing but additional complexity. Many people have problems trying to get the modularised components working, not because the software is faulty but because modules are more complicated to install and configure.

If you've chosen to compile any of the components as modules, then you'll also need to use:

```
# make modules
# make modules_install
```

to install your modules in the appropriate location.

You will also need to add some entries into your /etc/conf.modules file that will ensure that the kerneld program knows how to handle the kernel modules. You should add/modify the following:

```
alias net-pf-3 ax25
alias net-pf-6 netrom
alias net-pf-11 rose
alias tty-ldisc-1 slip
alias tty-ldisc-3 ppp
alias tty-ldisc-5 mkiss
alias bc0 baycom
alias nr0 netrom
alias pi0a pi2
alias pt0a pt
alias scc0 optoscc (or one of the other scc drivers)
alias sm0 soundmodem
alias tunl0 newtunnel
alias char-major-4 serial
alias char-major-5 serial
alias char-major-6 lp
```

4.1.2. What's new in 2.0.*+ModuleXX or 2.1.* Kernels ?

The 2.1.* kernels have enhanced versions of nearly all of the protocols and drivers. The most significant of the enhancements are:

modularised
the protocols and drivers have all been modularised so that you can insmod and rmmod them whenever you wish. This reduces the kernel memory requirements for infrequently used modules and makes development and bug hunting much simpler. That being said, it also makes configuration slightly more difficult.

All drivers are now network drivers
all of the network devices such as Baycom, SCC, PI, Packettwin
etc now present a normal network interface, that is they now
look like the ethernet driver does, they no longer look like
KISS TNC's. A new utility called net2kiss allows you to build a
kiss interface to these devices if you wish.
bug fixed
there have been many bug fixes and new features added to the
drivers and protocols. The Rose protocol is one important
addition.

4.2. The network configuration tools.

Now that you have compiled the kernel you should compile the new
network configuration tools. These tools allow you to modify the
configuration of network devices and to add routes to the routing
table.

The new alpha release of the standard net-tools package includes
support for AX.25 and NetRom support. I've tested this and it seems to
work well for me.

4.2.1. A patch kit that adds Rose support and fixes some bugs.

The standard net-tools-1.33.tar.gz package has some small bugs that
affect the AX.25 and NetRom support. I've made a small patch kit that
corrects these and adds Rose support to the tools as well.

You can get the patch from: zone.pspt.fi
<ftp://zone.pspt.fi/pub/linux/ham/ax25/net-
tools-1.33.rose.tjd.diff.gz>.

4.2.2. Building the standard net-tools release.

Don't forget to read the Release file and follow any instructions
there. The steps I used to compile the tools were:

```
# cd /usr/src
# tar xvfz net-tools-1.33.tar.gz
# zcat net-tools-1.33.rose.tjd.diff.gz | patch -p0
# cd net-tools-1.33
# make config
```

At this stage you will be presented with a series of configuration
questions, similar to the kernel configuration questions. Be sure to
include support for all of the protocols and network devices types
that you intend to use. If you do not know how to answer a particular
question then answer `Y'.

When the compilation is complete, you should use the:

```
# make install
```

command to install the programs in their proper place.

If you wish to use the IP firewall facilities then you will need the
latest firewall administration tool ipfwadm. This tool replaces the
older ipfw tool which will not work with new kernels.

I compiled the ipfwadm utility with the following commands:

```
# cd /usr/src
# tar xvfz ipfwadm-2.0beta2.tar.gz
# cd ipfwadm-2.0beta2
# make install
# cp ipfwadm.8 /usr/man/man8
# cp ipfw.4 /usr/man/man4
```

4.3. The AX.25 user and utility programs.

After you have successfully compiled and booted your new kernel, you
need to compile the user programs. To compile and install the user
programs you should use a series of commands similar to the following:

```
# cd /usr/src
# tax xvfz ax25-utils-2.1.42a.tar.gz
# cd ax25-utils-2.1.42a
# make config
# make
# make install
```

The files will be installed under the /usr directory by default in
subdirectories: bin, sbin, etc and man.

If this is a first time installation, that is you've never installed
any ax25 utilities on your machine before you should also use the:

```
# make installconf
```

command to install some sample configuration files into the /etc/ax25/
directory from which to work.

If you get messages something like:

```
gcc -Wall -Wstrict-prototypes -O2 -I../lib -c call.c
call.c: In function `statline':
call.c:268: warning: implicit declaration of function `attron'
call.c:268: `A_REVERSE' undeclared (first use this function)
call.c:268: (Each undeclared identifier is reported only once
call.c:268: for each function it appears in.)
```

then you should double check that you have the ncurses package
properly installed on your system. The configuration script attempts
to locate your ncurses packages in the common locations, but some
installations have ncurses badly installed and it is unable to locate
them.
5. A note on callsigns, addresses and things before we start.

Each AX.25 and NetRom port on your system must have a callsign/ssid
allocated to it. These are configured in the configuration files that

will be described in detail later on.

Some AX.25 implementations such as NOS and BPQ will allow you to configure the same callsign/ssid on each AX.25 and NetRom port. For somewhat complicated technical reasons Linux does not allow this. This isn't as big a problem in practise as it might seem.

This means that there are things you should be aware of and take into consideration when doing your configurations.

1. Each AX.25 and NetRom port must be configured with a unique callsign/ssid.

2. TCP/IP will use the callsign/ssid of the AX.25 port it is being transmitted or received by, ie the one you configured for the AX.25 interface in point 1.

3. NetRom will use the callsign/ssid specified for it in its configuration file, but this callsign is only used when your NetRom is speaking to another NetRom, this is not the callsign/ssid that AX.25 users who wish to use your NetRom `node' will use. More on this later.

4. Rose will, by default, use the callsign/ssid of the AX.25 port, unless the Rose callsign has been specifically set using the `rsparms' command. If you set a callsign/ssid using the `rsparms' command then Rose will use this callsign/ssid on all ports.

5. Other programs, such as the `ax25d' program can listen using any callsign/ssid that they wish and these may be duplicated across different ports.

6. If you are careful with routing you can configure the same IP address on all ports if you wish.

5.1. What are all those T1, T2, N2 and things ?

Not every AX.25 implementation is a TNC2. Linux uses nomenclature that differs in some respects from that you will be used to if your sole experience with packet is a TNC. The following table should help you interpret what each of the configurable items are, so that when you come across them later in this text you'll understand what they mean.

Linux	TAPR TNC	Description
T1	FRACK	How long to wait before retransmitting an unacknowledged frame.
T2	RESPTIME	The minimum amount of time to wait for another frame to be received before transmitting an acknowledgement.
T3	CHECK	The period of time we wait between sending

| | a check that the link is still active.

N2 | RETRY | How many times to retransmit a frame before
| | assuming the connection has failed.

Idle | | The period of time a connection can be idle
| | before we close it down.

Window | MAXFRAME | The maximum number of unacknowledged
| | transmitted frames.

5.2. Run time configurable parameters

The 2.1.* and 2.0.* +moduleXX kernels have a new feature that allows you to change many previously unchangable parameters at run time. If you take a careful look at the /proc/sys/net/ directory structure you will see many files with useful names that describe various parameters for the network configuration. The files in the /proc/sys/net/ax25/ directory each represents one configured AX.25 port. The name of the file relates to the name of the port.

The structure of the files in /proc/sys/net/ax25/<portname>/ is as follows:

FileName Meaning Values Default
ip_default_mode IP Default Mode 0=DG 1=VC 0
ax25_default_mode AX.25 Default Mode 0=Normal 1=Extended 0
backoff_type Backoff 0=Linear 1=Exponential 1
connect_mode Connected Mode 0=No 1=Yes 1
standard_window_size Standard Window 1 <= N <= 7 2
extended_window_size Extended Window 1 <= N <= 63 32
t1_timeout T1 Timeout 1s <= N <= 30s 10s
t2_timeout T2 Timeout 1s <= N <= 20s 3s
t3_timeout T3 Timeout 0s <= N <= 3600s 300s
idle_timeout Idle Timeout 0m <= N 20m
maximum_retry_count N2 1 <= N <= 31 10
maximum_packet_length AX.25 Frame Length 1 <= N <= 512 256

In the table T1, T2 and T3 are given in seconds, and the Idle Timeout is given in minutes. But please note that the values used in the sysctl interface are given in internal units where the time in seconds is multiplied by 10, this allows resolution down to 1/10 of a second. With timers that are allowed to be zero, eg T3 and Idle, a zero value indicates that the timer is disabled.

The structure of the files in /proc/sys/net/netrom/ is as follows:

FileName Values Default
default_path_quality 10
link_fails_count 2
network_ttl_initialiser 16

obsolescence_count_initialiser 6
routing_control 1
transport_acknowledge_delay 50
transport_busy_delay 1800
transport_maximum_tries 3
transport_requested_window_size 4
transport_timeout 1200

The structure of the files in /proc/sys/net/rose/ is as follows:

FileName Values Default
acknowledge_hold_back_timeout 50
call_request_timeout 2000
clear_request_timeout 1800
link_fail_timeout 1200
maximum_virtual_circuits 50
reset_request_timeout 1800
restart_request_timeout 1800
routing_control 1
window_size 3

To set a parameter all you need to do is write the desired value to
the file itself, for example to check and set the Rose window size
you'd use something like:

```
# cat /proc/sys/net/rose/window_size
3
# echo 4 >/proc/sys/net/rose/window_size
# cat /proc/sys/net/rose/window_size
4
```

6. Configuring an AX.25 port.

Each of the AX.25 applications read a particular configuration file to
obtain the parameters for the various AX.25 ports configured on your
Linux machine. For AX.25 ports the file that is read is the
/etc/ax25/axport file. You must have an entry in this file for each
AX.25 port you want on your system.

6.1. Creating the AX.25 network device.

The network device is what is listed when you use the `ifconfig'
command. This is the object that the Linux kernel sends and receives
network data from. Nearly always the network device has a physical
port associated with it, but there are occasions where this isn't
necessary. The network device does relate directly to a device driver.

In the Linux AX.25 code there are a number of device drivers. The most
common is probably the KISS driver, but others are the SCC driver(s),
the Baycom driver and the SoundModem driver.
Each of these device drivers will create a network device when it is
started.

6.1.1. Creating a KISS device.

Kernel Compile Options:

```
General setup --->
[*] Networking support
Network device support --->
[*] Network device support
...
[*] Radio network interfaces
[*] Serial port KISS driver for AX.25
```

Probably the most common configuration will be for a KISS TNC on a serial port. You will need to have the TNC preconfigured and connected to your serial port. You can use a communications program like minicom or seyon to configure the TNC into kiss mode.

To create a KISS device you use the kissattach program. In it simplest form you can use the kissattach program as follows:

```
# /usr/sbin/kissattach /dev/ttyS0 radio
# kissparms -p radio -t 100 -s 100 -r 25
```

The kissattach command will create a KISS network device. These devices are called `ax[0-9]'. The first time you use the kissattach command it creates `ax0', the second time it creates `ax1' etc. Each KISS device has an associated serial port.

The kissparms command allows you to set various KISS parameters on a KISS device.

Specifically the example presented would create a KISS network device using the serial device `/dev/ttyS0' and the entry from the /etc/ax25/axports with a port name of `radio'. It then configures it with a txdelay and slottime of 100 milliseconds and a ppersist value of 25.

Please refer to the man pages for more information.

6.1.1.1. Configuring for Dual Port TNC's

The mkiss utility included in the ax25-utils distribution allows you to make use of both modems on a dual port TNC. Configuration is fairly simple. It works by taking a single serial device connected to a single multiport TNC and making it look like a number of devices each connected to a single port TNC. You do this before you do any of the AX.25 configuration. The devices that you then do the AX.25 configuration on are pseudo-TTY interfaces, (/dev/ttyq*), and not the actual serial device. Pseudo-TTY devices create a kind of pipe through which programs designed to talk to tty devices can talk to other programs designed to talk to tty devices. Each pipe has a master and a slave end. The master end is generally called `/dev/ptyq*' and the slave ends are called `/dev/ttyq*'. There is a one to one relationship between masters and slaves, so /dev/ptyq0 is the master end of a pipe with /dev/ttyq0 as its slave. You must open the master end of a pipe

before opening the slave end. mkiss exploits this mechanism to split a single serial device into seperate devices.

Example: if you have a dual port tnc and it is connected to your /dev/ttyS0 serial device at 9600 bps, the command:

```
# /usr/sbin/mkiss -s 9600 /dev/ttyS0 /dev/ptyq0 /dev/ptyq1
# /usr/sbin/kissattach /dev/ttyq0 port1
# /usr/sbin/kissattach /dev/ttyq1 port2
```

would create two pseudo-tty devices that each look like a normal single port TNC. You would then treat /dev/ttyq0 and /dev/ttyq1 just as you would a conventional serial device with TNC connected. This means you'd then use the kissattach command as described above, on each of those, in the example for AX.25 ports called port1 and port2. You shouldn't use kissattach on the actual serial device as the mkiss program uses it.

The mkiss command has a number of optional arguments that you may wish to use. They are summarised as follows:

-c enables the addition of a one byte checksum to each KISS frame. This is not supported by most KISS implementation, it is supported by the G8BPG KISS rom.

-s <speed>
sets the speed of the serial port.

-h enables hardware handshaking on the serial port, it is off by default. Most KISS implementation do not support this, but some do.

-l enables logging of information to the syslog logfile.

6.1.2. Creating a Baycom device.

Kernel Compile Options:

```
Code maturity level options --->
[*] Prompt for development and/or incomplete code/drivers
General setup --->
[*] Networking support
Network device support --->
[*] Network device support
...
[*] Radio network interfaces
[*] BAYCOM ser12 and par96 driver for AX.25
```

Thomas Sailer, <sailer@ife.ee.ethz.ch>, despite the popularly held belief that it would not work very well, has developed Linux support for Baycom modems. His driver supports the Ser12 serial port, Par96 and the enhanced PicPar parallel port modems. Further information about the modems themselves may be obtained from the Baycom Web site <http://www.baycom.de/>.

Your first step should be to determine the i/o and addresses of the serial or parallel port(s) you have Baycom modem(s) connected to. When you have these you must configure the Baycom driver with them.

The BayCom driver creates network devices called: bc0, bc1, bc2 etc. when it is configured.

The sethdlc utility allows you to configure the driver with these parameters, or, if you have only one Baycom modem installed you may specify the parameters on the insmod commmand line when you load the Baycom module.

For example, a simple configuration. Disable the serial driver for COM1: then configure the Baycom driver for a Ser12 serial port modem on COM1: with the software DCD option enabled:

```
# setserial /dev/ttyS0 uart none
# insmod hdlcdrv
# insmod baycom mode="ser12*" iobase=0x3f8 irq=4
```

Par96 parallel port type modem on LPT1: using hardware DCD detection:

```
# insmod hdlcdrv
# insmod baycom mode="par96" iobase=0x378 irq=7 options=0
```

This is not really the preferred way to do it. The sethdlc utility works just as easily with one device as with many.

The sethdlc man page has the full details, but a couple of examples will illustrate the most important aspects of this configuration. The following examples assume you have already loaded the Baycom module using:

```
# insmod hdlcdrv
# insmod baycom
```

or that you compiled the kernel with the driver inbuilt.

Configure the bc0 device driver as a Parallel port Baycom modem on LPT1: with software DCD:

```
# sethdlc -p -i bc0 mode par96 io 0x378 irq 7
```

Configure the bc1 device driver as a Serial port Baycom modem on COM1:

```
# sethdlc -p -i bc1 mode "ser12*" io 0x3f8 irq 4
```

6.1.3. Configuring the AX.25 channel access parameters.

The AX.25 channel access parameters are the equivalent of the KISS ppersist, txdelay and slottime type parameters. Again you use the sethdlc utility for this.

Again the sethdlc man page is the source of the most complete information but another example of two won't hurt:

Configure the bc0 device with TxDelay of 200 mS, SlotTime of 100 mS, PPersist of 40 and half duplex:

```
# sethdlc -i bc0 -a txd 200 slot 100 ppersist 40 half
```

Note that the timing values are in milliseconds.

6.1.3.1. Configuring the Kernel AX.25 to use the BayCom device

The BayCom driver creates standard network devices that the AX.25 Kernel code can use. Configuration is much the same as that for a PI or PacketTwin card.

The first step is to configure the device with an AX.25 callsign. The ifconfig utility may be used to perform this.

```
# /sbin/ifconfig bc0 hw ax25 VK2KTJ-15 up
```

will assign the BayCom device bc0 the AX.25 callsign VK2KTJ-15. Alternatively you can use the axparms command, you'll still need to use the ifconfig command to bring the device up though:

```
# ifconfig bc0 up
# axparms -setcall bc0 vk2ktj-15
```

The next step is to create an entry in the /etc/ax25/axports file as you would for any other device. The entry in the axports file is associated with the network device you've configured by the callsign you configure. The entry in the axports file that has the callsign that you configured the BayCom device with is the one that will be used to refer to it.

You may then treat the new AX.25 device as you would any other. You can configure it for TCP/IP, add it to ax25d and run NetRom or Rose over it as you please.

6.1.4. Creating a SoundModem device.

Kernel Compile Options:

```
Code maturity level options --->
[*] Prompt for development and/or incomplete code/drivers
General setup --->
[*] Networking support
Network device support --->
[*] Network device support
...
[*] Radio network interfaces
[*] Soundcard modem driver for AX.25
[?] Soundmodem support for Soundblaster and compatible cards
[?] Soundmodem support for WSS and Crystal cards
[?] Soundmodem support for 1200 baud AFSK modulation
[?] Soundmodem support for 4800 baud HAPN-1 modulation
[?] Soundmodem support for 9600 baud FSK G3RUH modulation
```

Thomas Sailer has built a new driver for the kernel that allows you to use your soundcard as a modem. Connect your radio directly to your soundcard to play packet! Thomas recommends at least a 486DX2/66 if you want to use this software as all of the digital signal processing is done by the main CPU.

The driver currently emulates 1200 bps AFSK, 4800 HAPN and 9600 FSK (G3RUH compatible) modem types. The only sound cards currently supported are SoundBlaster and WindowsSoundSystem Compatible models. The sound cards require some circuitry to help them drive the Push-To-Talk circuitry, and information on this is available from Thomas's SoundModem PTT circuit web page <http://www.ife.ee.ethz.ch/~sailer/pcf/ptt_circ/ptt.html>. There are quite a few possible options, they are: detect the sound output from the soundcard, or use output from a parallel port, serial port or midi port. Circuit examples for each of these are on Thomas's site.

The SoundModem driver creates network devices called: sm0, sm1, sm2 etc when it is configured.

Note: the SoundModem driver competes for the same resources as the Linux sound driver. So if you wish to use the SoundModem driver you must ensure that the Linux sound driver is not installed. You can of course compile them both as modules and insert and remove them as you wish.

6.1.4.1. Configuring the sound card.

The SoundModem driver does not initialise the sound card. The ax25-utils package includes a utility to do this called `setcrystal' that may be used for SoundCards based on the Crystal chipset. If you have some other card then you will have to use some other software to initialise it. Its syntax is fairly straightforward:

setcrystal [-w wssio] [-s sbio] [-f synthio] [-i irq] [-d dma] [-c dma2]

So, for example, if you wished to configure a soundblaster card at i/o base address 0x388, irq 10 and DMA 1 you would use:
setcrystal -s 0x388 -i 10 -d 1

To configure a WindowSoundSystem card at i/o base address 0x534, irq 5, DMA 3 you would use:

setcrystal -w 0x534 -i 5 -d 3

The [-f synthio] parameter is the set the synthesiser address, and the [-c dma2] parameter is to set the second DMA channel to allow full duplex operation.

6.1.4.2. Configuring the SoundModem driver.

When you have configured the soundcard you need to configure the driver telling it where the sound card is located and what sort of modem you wish it to emulate.

The sethdlc utility allows you to configure the driver with these parameters, or, if you have only one soundcard installed you may specify the parameters on the insmod commmand line when you load the SoundModem module.

For example, a simple configuration, with one SoundBlaster soundcard configured as described above emulating a 1200 bps modem:

```
# insmod hdlcdrv
# insmod soundmodem mode="sbc:afsk1200" iobase=0x220 irq=5 dma=1
```

This is not really the preferred way to do it. The sethdlc utility works just as easily with one device as with many.

The sethdlc man page has the full details, but a couple of examples will illustrate the most important aspects of this configuration. The following examples assume you have already loaded the SoundModem modules using:

```
# insmod hdlcdrv
# insmod soundmodem
```

or that you compiled the kernel with the driver inbuilt.

Configure the driver to support the WindowsSoundSystem card we configured above to emulate a G3RUH 9600 compatible modem as device sm0 using a parallel port at 0x378 to key the Push-To-Talk:

```
# sethdlc -p -i sm0 mode wss:fsk9600 io 0x534 irq 5 dma 3 pario 0x378
```

Configure the driver to support the SoundBlaster card we configured above to emulate a 4800 bps HAPN modem as device sm1 using the serial port located at 0x2f8 to key the Push-To-Talk:

```
# sethdlc -p -i sm1 mode sbc:hapn4800 io 0x388 irq 10 dma 1 serio 0x2f8
```

Configure the driver to support the SoundBlaster card we configured above to emulate a 1200 bps AFSK modem as device sm1 using the serial port located at 0x2f8 to key the Push-To-Talk:

```
# sethdlc -p -i sm1 mode sbc:afsk1200 io 0x388 irq 10 dma 1 serio 0x2f8
```

6.1.4.3. Configuring the AX.25 channel access parameters.

The AX.25 channel access parameters are the equivalent of the KISS ppersist, txdelay and slottime type parameters. You use the sethdlc utility for this as well.

Again the sethdlc man page is the source of the most complete information but another example of two won't hurt:

Configure the sm0 device with TxDelay of 100 mS, SlotTime of 50mS, PPersist of 128 and full duplex:

```
# sethdlc -i sm0 -a txd 100 slot 50 ppersist 128 full
```

Note that the timing values are in milliseconds.

6.1.4.4. Setting the audio levels and tuning the driver.

It is very important that the audio levels be set correctly for any radio based modem to work. This is equally true of the SoundModem. Thomas has developed some utility programs that make this task easier. They are called smdiag and smmixer.

smdiag
provides two types of display, either an oscilloscope type display or an eye pattern type display.

smmixer
allows you to actually adjust the transmit and receive audio levels.

To start the smdiag utility in 'eye' mode for the SoundModem device sm0 you would use:

```
# smdiag -i sm0 -e
```

To start the smmixer utility for the SoundModem device sm0 you would use:

```
# smmixer -i sm0
```

6.1.4.5. Configuring the Kernel AX.25 to use the SoundModem

The SoundModem driver creates standard network devices that the AX.25 Kernel code can use. Configuration is much the same as that for a PI or PacketTwin card.

The first step is to configure the device with an AX.25 callsign. The ifconfig utility may be used to perform this.

```
# /sbin/ifconfig sm0 hw ax25 VK2KTJ-15 up
```

will assign the SoundModem device sm0 the AX.25 callsign VK2KTJ-15. Alternatively you can use the axparms command, but you still need the ifconfig utility to bring the device up:

```
# ifconfig sm0 up
# axparms -setcall sm0 vk2ktj-15
```

The next step is to create an entry in the /etc/ax25/axports file as you would for any other device. The entry in the axports file is associated with the network device you've configured by the callsign you configure. The entry in the axports file that has the callsign that you configured the SoundModem device with is the one that will be used to refer to it.

You may then treat the new AX.25 device as you would any other. You can configure it for TCP/IP, add it to ax25d and run NetRom or Rose over it as you please.

6.1.5. Creating a PI card device.

Kernel Compile Options:

```
General setup --->
[*] Networking support
Network device support --->
[*] Network device support
...
[*] Radio network interfaces
[*] Ottawa PI and PI/2 support for AX.25
```

The PI card device driver creates devices named `pi[0-9][ab]'. The first PI card detected will be allocated `pi0', the second `pi1' etc. The `a' and `b' refer to the first and second physical interface on the PI card. If you have built your kernel to include the PI card driver, and the card has been properly detected then you can use the following command to configure the network device:

```
# /sbin/ifconfig pi0a hw ax25 VK2KTJ-15 up
```

This command would configure the first port on the first PI card detected with the callsign VK2KTJ-15 and make it active. To use the device all you now need to do is to configure an entry into your /etc/ax25/axports file with a matching callsign/ssid and you will be ready to continue on.

The PI card driver was written by David Perry, <dp@hydra.carleton.edu>

6.1.6. Creating a PacketTwin device.

Kernel Compile Options:

```
General setup --->
[*] Networking support
Network device support --->
[*] Network device support
...
[*] Radio network interfaces
[*] Gracilis PackeTwin support for AX.25
```

The PacketTwin card device driver creates devices named `pt[0-9][ab]'. The first PacketTwin card detected will be allocated `pt0', the second `pt1' etc. The `a' and `b' refer to the first and second physical interface on the PacketTwin card. If you have built your kernel to include the PacketTwin card driver, and the card has been properly detected then you can use the following command to configure the network device:

```
# /sbin/ifconfig pt0a hw ax25 VK2KTJ-15 up
```

This command would configure the first port on the first PacketTwin card detected with the callsign VK2KTJ-15 and make it active. To use the device all you now need to do is to configure an entry into your /etc/ax25/axports file with a matching callsign/ssid and you will be ready to continue on.

The PacketTwin card driver was written by Craig Small VK2XLZ, <csmall@triode.apana.org.au>.

6.1.7. Creating a generic SCC device.

Kernel Compile Options:

```
General setup --->
[*] Networking support
Network device support --->
[*] Network device support
...
[*] Radio network interfaces
[*] Z8530 SCC KISS emulation driver for AX.25
```

Joerg Reuter, DL1BKE, jreuter@poboxes.com has developed generic support for Z8530 SCC based cards. His driver is configurable to support a range of different types of cards and present an interface that looks like a KISS TNC so you can treat it as though it were a KISS TNC.

6.1.7.1. Obtaining and building the configuration tool package.

While the kernel driver is included in the standard kernel distribution, Joerg distributes more recent versions of his driver with the suite of configuration tools that you will need to obtain as well.

You can obtain the configuration tools package from:

Joerg's web page <http://www.rat.de/jr/>

or:

db0bm.automation.fh-aachen.de

/incoming/dl1bke/

or:

insl1.etec.uni-karlsruhe.de

/pub/hamradio/linux/z8530/

or:

ftp.ucsd.edu

/hamradio/packet/tcpip/linux
/hamradio/packet/tcpip/incoming/

You will find multiple versions, choose the one that best suits the kernel you intend to use:

z8530drv-2.4a.dl1bke.tar.gz 2.0.*
z8530drv-utils-3.0.tar.gz 2.1.6 or greater

The following commands were what I used to compile and install the package for kernel version 2.0.30:

```
# cd /usr/src
# gzip -dc z8530drv-2.4a.dl1bke.tar.gz | tar xvpofz -
# cd z8530drv
# make clean
# make dep
# make module # If you want to build the driver as a module
# make for_kernel # If you want the driver to built into your kernel
# make install
```

After the above is complete you should have three new programs installed in your /sbin directory: gencfg, sccinit and sccstat. It is these programs that you will use to configure the driver for your card.

You will also have a group of new special device files created in your /dev called scc0-scc7. These will be used later and will be the `KISS' devices you will end up using.

If you chose to 'make for_kernel' then you will need to recompile your kernel. To ensure that you include support for the z8530 driver you must be sure to answer `Y' to: `Z8530 SCC kiss emulation driver for AX.25' when asked during a kernel `make config'.

If you chose to 'make module' then the new scc.o will have been installed in the appropriate /lib/modules directory and you do not need to recompile your kernel. Remember to use the insmod command to load the module before your try and configure it.

6.1.7.2. Configuring the driver for your card.

The z8530 SCC driver has been designed to be as flexible as possible so as to support as many different types of cards as possible. With this flexibility has come some cost in configuration.

There is more comprehensive documentation in the package and you should read this if you have any problems. You should particularly look at doc/scc_eng.doc or doc/scc_ger.doc for more detailed information. I've paraphrased the important details, but as a result there is a lot of lower level detail that I have not included.

The main configuration file is read by the sccinit program and is called /etc/z8530drv.conf. This file is broken into two main stages: Configuration of the hardware parameters and channel configuration. After you have configured this file you need only add:

```
# sccinit
```

into the rc file that configures your network and the driver will be initialised according to the contents of the configuration file. You must do this before you attempt to use the driver.

6.1.7.2.1. Configuration of the hardware parameters.

The first section is broken into stanzas, each stanza representing an 8530 chip. Each stanza is a list of keywords with arguments. You may

specify up to four SCC chips in this file by default. The #define MAXSCC 4 in scc.c can be increased if you require support for more.

The allowable keywords and arguments are:

chip
the chip keyword is used to separate stanzas. It will take anything as an argument. The arguments are not used.

data_a
this keyword is used to specify the address of the data port for the z8530 channel `A'. The argument is a hexadecimal number e.g. 0x300

ctrl_a
this keyword is used to specify the address of the control port for the z8530 channel `A'. The arguments is a hexadecimal number e.g. 0x304

data_b
this keyword is used to specify the address of the data port for the z8530 channel `B'. The argument is a hexadecimal number e.g. 0x301

ctrl_b
this keyword is used to specify the address of the control port for the z8530 channel `B'. The arguments is a hexadecimal number e.g. 0x305

irq
this keyword is used to specify the IRQ used by the 8530 SCC described in this stanza. The argument is an integer e.g. 5

pclock
this keyword is used to specify the frequency of the clock at the PCLK pin of the 8530. The argument is an integer frequency in Hz which defaults to 4915200 if the keyword is not supplied.

board
the type of board supporting this 8530 SCC. The argument is a character string. The allowed values are:

PA0HZP
the PA0HZP SCC Card

EAGLE
the Eagle card

PC100
the DRSI PC100 SCC card
PRIMUS
the PRIMUS-PC (DG9BL) card

```
BAYCOM
BayCom (U)SCC card

escc
this keyword is optional and is used to enable support for the
Extended SCC chips (ESCC) such as the 8580, 85180, or the 85280.
The argument is a character string with allowed values of `yes'
or `no'. The default is `no'.

vector
this keyword is optional and specifies the address of the vector
latch (also known as "intack port") for PA0HZP cards. There can
be only one vector latch for all chips. The default is 0.

special
this keyword is optional and specifies the address of the
special function register on several cards. The default is 0.

option
this keyword is optional and defaults to 0.

Some example configurations for the more popular cards are as follows:

BayCom USCC

chip 1
data_a 0x300
ctrl_a 0x304
data_b 0x301
ctrl_b 0x305
irq 5
board BAYCOM
#
# SCC chip 2
#
chip 2
data_a 0x302
ctrl_a 0x306
data_b 0x303
ctrl_b 0x307
board BAYCOM

PA0HZP SCC card

chip 1
data_a 0x153
data_b 0x151
ctrl_a 0x152
ctrl_b 0x150
irq 9
pclock 4915200
board PA0HZP
vector 0x168
escc no
```

```
#
#
#
chip 2
data_a 0x157
data_b 0x155
ctrl_a 0x156
ctrl_b 0x154
irq 9
pclock 4915200
board PA0HZP
vector 0x168
escc no

DRSI SCC card

chip 1
data_a 0x303
data_b 0x301
ctrl_a 0x302
ctrl_b 0x300
irq 7
pclock 4915200
board DRSI
escc no
```

If you already have a working configuration for your card under NOS, then you can use the gencfg command to convert the PE1CHL NOS driver commands into a form suitable for use in the z8530 driver configuration file.

To use gencfg you simply invoke it with the same parameters as you used for the PE1CHL driver in NET/NOS. For example:

```
# gencfg 2 0x150 4 2 0 1 0x168 9 4915200
```

will generate a skeleton configuration for the OptoSCC card.

6.1.7.3. Channel Configuration

The Channel Configuration section is where you specify all of the other parameters associated with the port you are configuring. Again this section is broken into stanzas. One stanza represents one logical port, and therefore there would be two of these for each one of the hardware parameters stanzas as each 8530 SCC supports two ports.

These keywords and arguments are also written to the /etc/z8530drv.conf file and must appear after the hardware parameters section.

Sequence is very important in this section, but if you stick with the suggested sequence it should work ok. The keywords and arguments are:

device
this keyword must be the first line of a port definition and
specifies the name of the special device file that the rest of
the configuration applies to. e.g. /dev/scc0

speed
this keyword specifies the speed in bits per second of the
interface. The argument is an integer: e.g. 1200

clock
this keyword specifies where the clock for the data will be
sourced. Allowable values are:

dpll
normal halfduplex operation

external
MODEM supplies its own Rx/Tx clock

divider
use fullduplex divider if installed.

mode
this keyword specifies the data coding to be used. Allowable
arguments are: nrzi or nrz

rxbuffers
this keyword specifies the number of receive buffers to allocate
memory for. The argument is an integer, e.g. 8.

txbuffers
this keyword specifies the number of transmit buffers to
allocate memory for. The argument is an integer, e.g. 8.

bufsize
this keyword specifies the size of the receive and transmit
buffers. The arguments is in bytes and represents the total
length of the frame, so it must also take into account the AX.25
headers and not just the length of the data field. This keyword
is optional and default to 384

txdelay
the KISS transmit delay value, the argument is an integer in mS.

persist
the KISS persist value, the argument is an integer.

slot
the KISS slot time value, the argument is an integer in mS.

tail
the KISS transmit tail value, the argument is an integer in mS.

fulldup
the KISS full duplex flag, the argument is an integer. 1==Full
Duplex, 0==Half Duplex.

wait
the KISS wait value, the argument is an integer in mS.

min
the KISS min value, the argument is an integer in S.

maxkey
the KISS maximum keyup time, the argument is an integer in S.

idle
the KISS idle timer value, the argument is an integer in S.

maxdef
the KISS maxdef value, the argument is an integer.

group
the KISS group value, the argument is an integer.

txoff
the KISS txoff value, the argument is an integer in mS.

softdcd
the KISS softdcd value, the argument is an integer.

slip
the KISS slip flag, the argument is an integer.

6.1.7.4. Using the driver.

To use the driver you simply treat the /dev/scc* devices just as you would a serial tty device with a KISS TNC connected to it. For example, to configure Linux Kernel networking to use your SCC card you could use something like:

kissattach -s 4800 /dev/scc0 VK2KTJ

You can also use NOS to attach to it in precisely the same way. From JNOS for example you would use something like:

- --- BEGIN Linux AX25 HOWTO part 3/3 ---

21.2. IPIP encapsulated gateway configuration.

Linux is now very commonly used for TCP/IP encapsulated gateways
around the world. The new tunnel driver supports multiple encapsulated
routes and makes the older ipip daemon obsolete.

A typical configuration would look similar to the following.

. . . . . .
--- .
| Network /---------\ . Network

/sbin/route add -net 44.34.9.0 netmask 255.255.255.0 tunl0 gw 174.84.6.17
/sbin/route add -net 44.13.28.0 netmask 255.255.255.0 tunl0 gw 212.37.126.3
...
...
...
```

/etc/ax25/axports

```
# name callsign speed paclen window description
4800 VK2KTJ-0 4800 256 2 144.800 MHz
```

Some points to note here are:

• The new tunnel driver uses the gw field in the routing table in place of the pointopoint parameter to specify the address of the remote IPIP gateway. This is why it now supports multiple routes per interface.

• You can configure two network devices with the same address. In this example both the sl0 and the tunl0 devices have been configured with the IP address of the radio port. This is done so that the remote gateway sees the correct address from your gateway in encapsulated datagrams sent to it.

• The route commands used to specify the encapsulated routes can be automatically generated by a modified version of the munge script. This is included below. The route commands would then be written to a separate file and read in using the bash source /etc/ipip.routes command (assuming you called the file with the routing commands /etc/ipip.routes) as illustrated. The source file must be in the NOS route command format.

• Note the use of the window argument on the route command. Setting this parameter to an appropriate value improves the performance of your radio link.

The new tunnel-munge script:

```
#!/bin/sh
#
# From: Ron Atkinson <n8fow@hamgate.cc.wayne.edu>
#
# This script is basically the 'munge' script written by Bdale N3EUA
# for the IPIP daemon and is modified by Ron Atkinson N8FOW. It's
# purpose is to convert a KA9Q NOS format gateways route file
# (usually called 'encap.txt') into a Linux routing table format
# for the IP tunnel driver.
#
# Usage: Gateway file on stdin, Linux route format file on stdout.
# eg. tunnel-munge < encap.txt > ampr-routes
#
# NOTE: Before you use this script be sure to check or change the
# following items:
#
# 1) Change the 'Local routes' and 'Misc user routes' sections
# to routes that apply to your own area (remove mine please!)
# 2) On the fgrep line be sure to change the IP address to YOUR
# gateway Internet address. Failure to do so will cause serious
# routing loops.
# 3) The default interface name is 'tunl0'. Make sure this is
# correct for your system.

echo "#"
echo "# IP tunnel route table built by $LOGNAME on `date`"

echo "# the end"
```

21.3. AXIP encapsulated gateway configuration

Many Amateur Radio Internet gateways encapsulate AX.25, NetRom and Rose in addition to tcp/ip. Encapsulation of AX.25 frames within IP datagrams is described in RFC-1226 by Brian Kantor. Mike Westerhof wrote an implementation of an AX.25 encapsulation daemon for unix in 1991. The ax25-utils package includes a marginally enhanced version of it for Linux.

An AXIP encapsulation program accepts AX.25 frames at one end, looks at the destination AX.25 address to determine what IP address to send them to, encapsulates them in a tcp/ip datagram and then transmits them to the appropriate remote destination. It also accepts tcp/ip datagrams that contain AX.25 frames, unwraps them and processes them as if it had received them directly from an AX.25 port. To distinguish IP datagrams containing AX.25 frames from other IP datagrams which don't, AXIP datagrams are coded with a protocol id of 4 (or 94 which is now deprecated). This process is described in RFC-1226.

The ax25ipd program included in the ax25-utils package presents itself as a program supporting a KISS interface across which you pass AX.25 frames, and an interface into the tcp/ip protocols. It is configured with a single configuration file called /etc/ax25/ax25ipd.conf.

21.3.1. AXIP configuration options.

The ax25ipd program has two major modes of operation. "digipeater" mode and "tnc" mode. In "tnc" mode the daemon is treated as though it were a kiss TNC, you pass KISS encapsulated frames to it and it will transmit them, this is the usual configuration. In "digipeater" mode, you treat the daemon as though it were an AX.25 digipeater. There are subtle differences between these modes.

In the configuration file you configure "routes" or mappings between destination AX.25 callsigns and the IP addresses of the hosts that you want to send the AX.25 packets too. Each route has options which will be explained later.
Other options that are configured here are

the tty that the ax25ipd daemon will open and its speed (usually one end of a pipe)

what callsign you want to use in "digipeater" mode

beacon interval and text

whether you want to encapsulate the AX.25 frames in IP datagrams or in UDP/IP datagrams. Nearly all AXIP gateways use IP encapsulation, but some gateways are behind firewalls that will not allow IP with the

AXIP protocol id to pass and are forced to use UDP/IP. Whatever you choose must match what the tcp/ip host at the other end of the link is using.

21.3.2. A typical /etc/ax25/ax25ipd.conf file.

```
#
# ax25ipd configuration file for station floyd.vk5xxx.ampr.org
#
# Select axip transport. 'ip' is what you want for compatibility
# with most other gateways.
#
socket ip
#
# Set ax25ipd mode of operation. (digi or tnc)
#
mode tnc
#
# If you selected digi, you must define a callsign. If you selected
# tnc mode, the callsign is currently optional, but this may change
# in the future! (2 calls if using dual port kiss)
#
#mycall vk5xxx-4
#mycall2 vk5xxx-5
#
# In digi mode, you may use an alias. (2 for dual port)
#
#myalias svwdns
#myalias2 svwdn2
#
# Send an ident every 540 seconds ...
#
#beacon after 540
#btext ax25ip -- tncmode rob/vk5xxx -- Experimental AXIP gateway
#
# Serial port, or pipe connected to a kissattach in my case
#
device /dev/ttyq0
#
# Set the device speed
#
speed 9600
#
# loglevel 0 - no output
# loglevel 1 - config info only
# loglevel 2 - major events and errors
# loglevel 3 - major events, errors, and AX25 frame trace
# loglevel 4 - all events
# log 0 for the moment, syslog not working yet ...
#
loglevel 2
```

```
#
# If we are in digi mode, we might have a real tnc here, so use param to
# set the tnc parameters ...
#
#param 1 20
#
# Broadcast Address definition. Any of the addresses listed will be forwarded
# to any of the routes flagged as broadcast capable routes.
#
broadcast QST-0 NODES-0
#
# ax.25 route definition, define as many as you need.
# format is route (call/wildcard) (ip host at destination)
# ssid of 0 routes all ssid's
#
# route <destcall> <destaddr> [flags]
#
# Valid flags are:
# b - allow broadcasts to be transmitted via this route
# d - this route is the default route
#
route vk2sut-0 44.136.8.68 b
route vk5xxx 44.136.188.221 b
route vk2abc 44.1.1.1
#
#
```

21.3.3. Running ax25ipd

Create your /etc/ax25/axports entry:

```
# /etc/ax25/axports
#
axip VK2KTJ-13 9600 256 AXIP port
#
```

Run the kissattach command to create that port:

```
/usr/sbin/kissattach /dev/ptyq0 axip
```

Run the ax25ipd program:

```
/usr/sbin/ax25ipd &
```

Test the AXIP link:

```
call axip vk5xxx
```

21.3.4. Some notes about the routes and route flags

The "route" command is where you specify where you want your AX.25 packets encapsulated and sent to. When the ax25ipd daemon receives a packet from its interface, it compares the destination callsign with each of the callsigns in its routing table. If if finds a match then

the ax.25 packet is encapsulated in an IP datagram and then transmitted to the host at the specified IP address.

There are two flags you can add to any of the route commands in the ax25ipd.conf file. The two flags are:

b traffic with a destination address matching any of those on the list defined by the "broadcast" keyword should be transmitted via this route.

d any packets not matching any route should be transmitted via this route.

The broadcast flag is very useful, as it enables informations that is normally destined for all stations to a number of AXIP destinations. Normally axip routes are point-to-point and unable to handle 'broadcast' packets.

21.4. Linking NOS and Linux using a pipe device

Many people like to run some version of NOS under Linux because it has all of the features and facilities they are used to. Most of those people would also like to have the NOS running on their machine capable of talking to the Linux kernel so that they can offer some of the linux capabilities to radio users via NOS.

Brandon S. Allbery, KF8NH, contributed the following information to explain how to interconnect the NOS running on a Linux machine with the kernel code using the Linux pipe device.

Since both Linux and NOS support the slip protocol it is possible to link the two together by creating a slip link. You could do this by using two serial ports with a loopback cable between them, but this would be slow and costly. Linux provides a feature that many other Unix-like operating systems provide called `pipes'. These are special pseudo devices that look like a standard tty device to software but in fact loopback to another pipe device. To use these pipes the first program must open the master end of the pipe, and the open then the second program can open the slave end of the pipe. When both ends are open the programs can communicate with each other simply by writing characters to the pipes in the way they would if they were terminal devices.

To use this feature to connect the Linux Kernel and a copy of NOS, or some other program you first must choose a pipe device to use. You can find one by looking in your /dev directory. The master end of the pipes are named: ptyq[1-f] and the slave end of the pipes are known as: ttyq[1-f]. Remember they come in pairs, so if you select /dev/ptyqf as your master end then you must use /dev/ttyqf as the slave end.

Once you have chosen a pipe device pair to use you should allocate the master end to you linux kernel and the slave end to the NOS program,

as the Linux kernel starts first and the master end of the pipe must
be opened first. You must also remember that your Linux kernel must
have a different IP address to your NOS, so you will need to allocate
a unique address for it if you haven't already.

You configure the pipe just as if it were a serial device, so to
create the slip link from your linux kernel you can use commands
similar to the following:

```
# /sbin/slattach -s 38400 -p slip /dev/ptyqf &
# /sbin/ifconfig sl0 broadcast 44.255.255.255 pointopoint 44.70.248.67 /
mtu 1536 44.70.4.88
# /sbin/route add 44.70.248.67 sl0
# /sbin/route add -net 44.0.0.0 netmask 255.0.0.0 gw 44.70.248.67
```

In this example the Linux kernel has been given IP address 44.70.4.88
and the NOS program is using IP address 44.70.248.67. The route
command in the last line simply tells your linux kernel to route all
datagrams for the amprnet via the slip link created by the slattach
command. Normally you would put these commands into your
/etc/rc.d/rc.inet2 file after all your other network configuration is
complete so that the slip link is created automatically when you
reboot. Note: there is no advantage in using cslip instead of slip as
it actually reduces performance because the link is only a virtual one
and occurs fast enough that having to compress the headers first takes
longer than transmitting the uncompressed datagram.

To configure the NOS end of the link you could try the following:

```
# you can call the interface anything you want; I use "linux" for convenience.
attach asy ttyqf - slip linux 1024 1024 38400
route addprivate 44.70.4.88 linux
```

These commands will create a slip port named `linux' via the slave end
of the pipe device pair to your linux kernel, and a route to it to
make it work. When you have started NOS you should be able to ping and
telnet to your NOS from your Linux machine and vice versa. If not,
double check that you have made no mistakes especially that you have
the addresses configured properly and have the pipe devices around the
right way.

22. Where do I find more information about .... ?

Since this document assumes you already have some experience with
packet radio and that this might not be the case I've collected a set
of references to other information that you might find useful.

22.1. Packet Radio

You can get general information about Packet Radio from these sites:

American Radio Relay League <http://www.arrl.org/>,

Radio Amateur Teleprinter Society <http://www.rats.org/>

Tucson Amateur Packet Radio Group <http://www.tapr.org/>

22.2. Protocol Documentation

AX.25, NetRom - Jonathon Naylor has collated a variety of documents that relate to the packet radio protocols themselves. This documentation has been packaged up into ax25-doc-1.0.tar.gz <ftp://ftp.pspt.fi/pub/ham/linux/ax25/ax25-doc-1.0.tar.gz>

22.3. Hardware Documentation

Information on the PI2 Card is provided by the Ottawa Packet Radio Group <http://hydra.carleton.ca/>.

Information on Baycom hardware is available at the Baycom Web Page <http://www.baycom.de/>.

23. Discussion relating to Amateur Radio and Linux.

There are various places that discussion relating to Amateur Radio and Linux take place. They take place in the comp.os.linux.* newsgroups, they also take place on the HAMS list on vger.rutgers.edu. Other places where they are held include the tcp-group mailing list at ucsd.edu (the home of amateur radio TCP/IP discussions), and you might also try the #linpeople channel on the linuxnet irc network.

To join the Linux linux-hams channel on the mail list server, send mail to:

Majordomo@vger.rutgers.edu

with the line:

subscribe linux-hams

in the message body. The subject line is ignored.

The linux-hams mailing list is archived at:

zone.pspt.fi <http://zone.pspt.fi/archive/linux-hams/> and zone.oh7rba.ampr.org <http://zone.oh7rba.ampr.org/archive/linux-hams/>. Please use the archives when you are first starting, because many common questions are answered there.

To join the tcp-group send mail to:

listserver@ucsd.edu

with the line:

subscribe tcp-group

in the body of the text.

Note: Please remember that the tcp-group is primarily for discussion of the use of advanced protocols, of which TCP/IP is one, in Amateur Radio. Linux specific questions should not ordinarily go there.

24. Acknowledgements.

The following people have contributed to this document in one way or another, knowingly or unknowingly. In no particular order (as I find them): Jonathon Naylor, Thomas Sailer, Joerg Reuter, Ron Atkinson, Alan Cox, Craig Small, John Tanner, Brandon Allbery, Hans Alblas, Klaus Kudielka, Carl Makin.

25. Copyright.

- --- BEGIN Linux HAM HOWTO part 1/2 ---

Linux HAM-HOWTO, Amateur Radio.
Terry Dawson, VK2KTJ, terry@perf.no.itg.telstra.com.au
v2.3, 1 April 1997

It is hoped that this document will assist Amateur Radio operators in
finding and trying the various amateur radio software that has been
written for or ported to Linux. It is also hoped that as a consequence
of this information being available that more amateur radio operators
will choose Linux as the platform of choice for their experimentation,
and that software developers will choose Linux as the platform for
their software development, further expanding the role of operating
systems like Linux in the Amateur Radio field.

1. Introduction.

This list was prompted by comments that had been expressed in the
various Linux newsgroups about the number of amateur radio operators
that were involved with Linux. It is now clear that Linux is becoming
a popular platform for Amateur Radio development work.

This list was originally called the RADIOLINUX list, but has been
moved into the Linux Documentation Project HOWTO collection, so it has
been renamed the HAM-HOWTO. I make no apologies for the name.

1.1. Changes from the previous version

Additions:
Added entry based last updated field.
bpf - filter calculator
BayBox - Packet BBS
digiinfo - digipeater information database
Contest logging program
Chirp contest logger
bip
```

pileup
twclock
DX Cluster watcher
F6FBB BBS

Corrections/Updates:
Changed all ftp: url's to point to the directory rather than the file.
CLX, and just about everything else.
Updated location of John Gotts mirror.

ToDo:
find a way of automating this, or find an alternate means of
presenting this information.

2. Where to obtain new versions of this document.

The Linux Documentation Project runs a Web Server and this document
appears there as The HAM-HOWTO <http://sunsite.unc.edu/mdw/HOWTO/HAM-
HOWTO.html>.

Dennis Boylan N4ZMZ dennis@nanovx.atl.ga.us makes it available at the
following three locations:

www.com <http://www.com/linux/radio/index.html>, www.hboc.com
<http://www.hboc.com/linux/index.html> and www.lan.com
<http://www.lan.com/linux/index.html>.

John Gotts N8QDW jgotts@engin.umich.edu makes it available at: www-
personal.engin.umich.edu <http://www-
personal.engin.umich.edu/~jgotts/linux/HOWTO/HAM/HAM-HOWTO.html>.

Dan Todd dantodd@fusilli.ucdavis.edu makes it available at the
following two locations: wheel.dcn.davis.ca
<http://wheel.dcn.davis.ca/~dantodd/Linux/HAM-HOWTO.html>, and
fusilli.ucdavis.edu <http://fusilli.ucdavis.edu/Linux/HAM-HOWTO.html>.

Alan Hargreaves VK2KVF alan@dap.CSIRO.AU makes it available in
Australia at: www.dap.csiro.au <http://www.dap.csiro.au/RadioLinux>.

The Tuebingen Radio Club has it available from their home page at:
DARC Home Page <http://www.neckar-alb.de/darc/welcome.html>

Please let me know if you'd like to make it available somewhere too.
I'd like to see it on some Web Servers that are accessible from radio.

3. Satellite Software.

The following software is for use in experimentation with Satellite
communication.

3.1. MicroSat Ground Station Software

Author
John Melton, G0ORX/N6LYT, g0orx@amsat.org and Jonathan Naylor
G4KLX, g4klx@amsat.org

Description
Microsat Ground Station software.

Status
BETA. Version 0.91 released.

Updated
01 Apr 97

System requirements
Alan Cox's kernel based AX.25 support ver 1.1.12 or better. X-Windows. The programs make use of the Athena Widgets and look much better with the 3D libraries.

Detail
This software allows you to use of a KISS tnc to directly communicate with the Microsat series of satellites. It provides an Athena Widgets based X-Windows interface, and allows you a comprehensive range of means of interacting with the satellite. The software should work with any window manager.

The software provides the following programs:

xpb:
broadcast monitor

xpg:
ftl0 file upload program, message upload program

xtlm:
telemetry display program

downloaded:
downloaded file list viewer
directory:
directory list viewer

message:
message preparation application

viewtext:
uncompressed ASCII text file viewer

viewlog:
display the contents of some log files

xweber:
special program for downloading webersat images

phs:
general purpose PACSAT header stripper

Where and How to obtain it.
John's software is available from: ftp.cs.nott.ac.uk <ftp://ftp.cs.nott.ac.uk/jsn/> or ftp.amsat.org <ftp://ftp.amsat.org/amsat/software/Linux/> or ftp.funet.fi

<ftp://ftp.funet.fi/pub/ham/satellite/pacsat/>. The version current at the time of writing was microsat-0.91.tar.gz. Please check for new versions.

Licensing/Copyright

3.2. SatTrack - Satellite tracking program

Name
SatTrack

Author
Manfred Bester, DL5KR, manfred@ssl.berkeley.edu, (510) 849-9922

Description
Satellite realtime tracking and orbit prediction program with X11 color graphics.

Status
Version 4.0 is a fully commercial release. Version 3.1.5 is the last freely available release.

Updated
01 Apr 97

System requirements
A vt100 terminal and or X11 server. A Maths Coprocessor is useful, but not essential, for good performance.

Detail
SatTrack is a satellite tracking program that has been written in 'C' language on a UNIX workstation. It provides two different live displays, for single or multiple satellites, and two different orbit prediction facilities. Cursor controls used in both live displays are compatible with the VT100 standard, which allows the program to be run basically from any terminal. An optional X Window graphics display shows the typical world map tracking chart. The orbit prediction can be run either interactively or in a batch mode. In the latter case all necessary parameters are specified on the command line. The program uses the NORAD/NASA two-line Keplerian element (TLE) sets directly.

The current version of SatTrack can track a single satellite and/or display multiple satellites for a single ground station. It also can control suitable ground station hardware, like antennas and radio equipment, and has an autotrack mode in which it switches automatically between a number of specified satellites. For calibration purposes tracking of the Sun and the

Moon are also provided. Future releases will provide more options. SatTrack requires about 5MB of disk space in the full distribution with eight different world maps (2 styles, with 4 different sizes each, to fit everyone's screen and taste) and less than 1.5 MB of memory at run time. More information can be obtained from the SatTrack WWW Home Page <http://www.primenet.com/~bester/sattrack.html>.

Where and How to obtain it.
The commerical version of SatTrack can be found at: SatTrack WWW Home Page <http://www.primenet.com/~bester/sattrack.html>.

The free version of SatTrack may be found at: ftp.jvnc.net <ftp://ftp.jvnc.net/priv/kupiec/sattrack/> or ftp.amsat.org <ftp://ftp.amsat.org/amsat/software/Linux/>.

Licensing/Copyright
The software is Copyright of Manfred Bester. It can be used without special permission for non-profit, non-commercial use. For commercial applications a license from the author is required. Version 4.0 is a fully commercially supported release.

Contributed by:
Manfred Bester, DL5KR

3.3. Predict

Author
John A. Magliacane, KD2BD, kd2bd@amsat.org

Description
A satellite orbital prediction program that also tracks the sun's position to predict visible satellite passes.

Status
Complete and working.

Updated
01 Apr 97

System requirements
predict is a screen-oriented program that utilizes the ncurses-1.8.5 (or later) library. A color terminal is a plus, but not a necessity.

Detail
Features of predict include azimuth and elevation headings of satellite passes, orbital phase, sub-satellite point locations, slant ranges, orbit numbers, and sunlight visibility as a function of date and time. The program is simple, fast, and easy to use. Predict maintains an orbital database for 21 satellites that can be updated by the user through the keyboard or by using files containing NASA 2-line orbital element data. Since this program operates under a multiuser environment, each user on the

system owns and maintains his or her own unique orbital data base.

This program has been compiled using the highest level of compiler optimization for high speed execution, and uses an a.out binary format for greatest compatibility.

To install the package use the following:

```
# cd /
# tar xvfz predict.tgz
```

Where and How to obtain it.
You can obtain predict.tgz from: amsat.org <ftp://amsat.org/amsat/software/Linux/>

Licensing/Copyright
This software is available free of charge and must be used for non-commercial purposes only.

Contributed by
John A. Magliacane, KD2BD

3.4. UO11

Author
John A. Magliacane, KD2BD, kd2bd@amsat.org

Description
A simple UoSAT-OSCAR-11 satellite telemetry decoding program.

Status
Complete and working.

Updated
01 Apr 97

System requirements
A 1200 baud UoSAT-OSCAR-11 FSK demodulator (Bell-202 is suitable), a VHF-FM receiver that can tune to 145.825 MHz, a small yagi antenna, and a communications program such as Minicom that can save 1200 baud ASCII telemetry data to a text file.

Detail
uo11 decodes ASCII telemetry data that has been captured through a terminal program, error checks the received data, and applies calibration equations to the received data to produce a report that can be easily understood and analyzed. uo11 comes pre-compiled (a.out format) with a man page entry for ease of use.

To install you should use the following commands:

```
# cd /
# tar xvfz uo11.tgz
```

Where and How to obtain it.
You can obtain uo11.tgz from: amsat.org
<ftp://amsat.org/amsat/software/Linux/>

Licensing/Copyright
This software is available free of charge and must be used for
non-commercial purposes only.

Contributed by
John A. Magliacane, KD2BD

3.5. Dove

Author
John A. Magliacane, KD2BD, kd2bd@amsat.org

Description
A simple DOVE-OSCAR-17 satellite telemetry decoding program.

Status
Complete and working.

Updated
01 Apr 97

System requirements
A terminal node controller (TNC), a VHF-FM receiver that can
tune to 145.825 MHz, a small yagi antenna, and a communications
program such as Minicom that can save 1200 baud ASCII telemetry
data to a text file.

Detail
dove decodes ASCII telemetry data that has been captured through
a terminal program and applies calibration equations to the
received data to produce a report that can be easily understood
and analyzed. dove comes pre-compiled (a.out format) with a man
page entry for ease of use.

To install Dove you should use the following commands:

```
# cd /
# tar xvfz dove.tgz
```

Where and How to obtain it.
You can obtain dove.tgz from: amsat.org
<ftp://amsat.org/amsat/software/Linux/>

Licensing/Copyright
This software is available free of charge and must be used for
non-commercial purposes only.

Contributed by
John A. Magliacane, KD2BD

3.6. Kepgen

Author
John A. Magliacane, KD2BD, kd2bd@amsat.org

Description
A simple, yet useful utility that generates Keplerian data files
in the NASA 2-line format from data entered through the
keyboard.

Status
Complete.

Updated
01 Apr 97

System requirements
kepgen is a screen-oriented program that utilizes the
ncurses-1.8.5 (or later) library. A color terminal is a plus,
but not a necessity.

Detail
kepgen allows the user to create checksummed Keplerian data
files in the NASA 2-line format using orbital data entered via
the keyboard. kepgen was created out of the need for generating
2-line orbital files from orbital data copied from WA3NAN audio
transmissions during Space Shuttle missions. The files created
can be read by virtually any satellite tracking or orbital
prediction program. kepgen comes pre-compiled (a.out format)
with a man page entry for ease of use.

To install kepgen you should use the following commands:

cd /
tar xvfz kepgen.tgz

Where and How to obtain it.
You can obtain kepgen.tgz from: amsat.org
<ftp://amsat.org/amsat/software/Linux/>

Licensing/Copyright
This software is available free of charge and must be used for
non-commercial purposes only.

Contributed by
John A. Magliacane, KD2BD

4. Shack Automation Software.

Software for simplifying tasks in the shack. Examples might include
software for controlling the newer breed of radios, logging programs,
QSL database, or antenna rotation.

4.1. FT-890 remote control

Author
Emarit Ranu, KG0CQ, drranu@holly.ColoState.EDU

Description
A simple program to control a Yaesu FT-890 transciever via its CAT port from linux.

Status
Working

Updated
01 Apr 97

System requirements
Yaesu FT-890, Yaesu FIF-232C interface converter or homebuilt equivalent (Feb 1993 "QST", page 37). Linux, serial cable.

Detail
The program is started with one parameter specifying the com port to use. Once started the program is menu driven. Future versions will support an X-Windows interface.

Where and How to obtain it.
The software is currently only available from the author by email.

Licensing/Copyright
You may copy this program millions of times, the only restrictions are:

- You may not charge ANYONE for the program itself.
- You may not distribute modified versions of the program.
- If you distribute the program, it MUST be the ORIGINAL tar file as received by the author. The README file has to be included.

Contributed by:
Emarit Ranu, KG0CQ

5. Packet Radio

Software for use in conjunction with, or for facilitating packet radio.

5.1. F6FBB Packet BBS

Author
Jean-Paul Roubelat, F6FBB, jpr@f6fbb.org

Description
Fully Features Packet Radio BBS system with X11 Windows interface

Status
Version 7.00b45 is Beta.

Updated
01 Apr 97

System Requirements
Kernel based AX.25/NetRom/Rose network configuration. X11 windowing system for the X11 version.

Detail
This is a port of the well known F6FBB Packet Bulletin Board system to Linux. The BBS supports connections from AX.25, NetRom, Rose and TCP/IP and offers all of the features you'd expect from the product. The optional X11 interface provides a nicely presented sysop interface.

A mailing list for F6FBB is available. To subscribe send a mail message to: majordomo@f6fbb.org with the line `subscribe xfbb' in the body of the message. The mailing list is archived at zone.pspt.fi <http://zone.pspt.fi/archive/fbb/>.

Where and how to obtain it
You can obtain the F6FBB package from its home site at: F6FBB Home Page <http://www.f6fbb.org/>.

Licensing/Copyright etc.
The F6FBB software is frelly available for non-commercial use.

5.2. DX Cluster Watcher

Author
Pierluigi Guerzoni, IZ4AKO, iz4ako@ing49.unife.it

Description
Displays DX information passively received from a DX Cluster Node.

Status
Version 4, stable.

Updated
01 Apr 97

System Requirements
Requires Kernel based AX.25 configuration.

Detail
The DX Cluster watchers listens to the DX Cluster traffic on your frequency, captures it and displays it in a coloured text window. It conserves traffic on the frequency by not requiring you to actually connect to the cluster node.

Where and how to obtain it
You can obtain the DX Cluster Watcher from the: DX Cluster Watcher Home Page <http://ing49.unife.it/~iz4ako/project_inglese.html>.

Licensing/Copyright etc.
GNU GPL

Contributed by
Pierluigi Guerzoni, IZ4AKO, iz4ako@ing49.unife.it

5.3. Digiinfo

Author
Ported by Mario Lorenz, DL5MLO, dl5mlo@vdazone.org

Description
A database of packet radio network information.

Status
Version 2.5.1 is stable.
Updated
01 Apr 97

System Requirements
No special requirements.

Detail
digiinfo was a program initially written for the Atari by
Karsten DC7OS. Digiinfo is a database program for displaying
information about the packet radio networks.

Where and how to obtain it
You can obtain the digiinfo package and database from its home
site at: www.vdazone.org
<http://www.vdazone.org/~dl5mlo/digiinfo/>.

Licensing/Copyright etc.
ALAS, Amateur only license

Contributed by
Mario Lorenz, DL5MLO, dl5mlo@vdazone.org

5.4. BayBox BBS

Author
Flori Radlherr, DL8MBT, flori@t-online.de

Description
A Packet Bulleting Board System for Linux.

Status
Version 1.38, stable.

Updated
01 Apr 97

System Requirements
Recommended hardware is 80486/33Mhz with 8MB RAM

Detail
Unfortunately the documentation is in German and I'm unable to
understand most of it. I get the impression though that this is
a BBS that supports all of the usual features on a packet radio

bbs, forwarding etc, but the documentation seems to suggest that the Linux version supports telnet access only. This isn't really a big constraint, as you can easily configure a session under the Linux ax25d program to accept AX.25/NetRom/Rose connections and connect the BBS via telnet.

If you're able to help by giving a better description, I'd appreciate it.

Where and how to obtain it
You can obtain the BayBOX from its home sites at:
members.aol.com <http://members.aol.com/baybox/>

Licensing/Copyright etc.
The BayCom-Mailbox software is intended for usage in amateur radio context only. Any usage outside of the amateur radio AX.25 network, especially commercial usage or distribution is prohibited. Within the scope of this limitation, usage and copying of the BayCom-Mailbox without fee is hereby granted. In any case of usage, the software is provided "as is" and comes with absolutely no warranty, neither implied nor expressed.
Contributed by
Iztok Saje, S52D, s52d@s55tcp.ampr.org

5.5. JNET

Author
Takeshi Shoji, JF2CEX, taka@myk.ilc.or.jp

Description
An enhanced version of KA9Q NOS for Linux and other platforms.

Status
Version 961210, Stable, released.

Updated
01 Apr 97

System Requirements
No special system requirements, requires KISS TNC.

Detail
This another actively maintained derivative of the KA9Q NOS package. This version has been ported to a wide range of alternative platforms and offers some enhancements not available in other NOS derivatives. A small catch is that most of the documentation is in Japanese.

Where and how to obtain it
You can obtain the latest version of JNET from its home site at:
www.myk.ilc.or.jp
<http://www.myk.ilc.or.jp/~taka/software.html#jnetcex>.

Licensing/Copyright etc.
I'm actually not sure. I suspect though that as a NOS derivative
it is freely usable by amateur radio operators.

Contributed by
Isao SEKI, http://www.prug.or.jp/people/jm1wbb

5.6. XNet

Author
Richard R. Parry, W9IF, rparry@qualcomm.com

Description
A traffic analyser for AX.25 networks.

Status
Stable, released.

Updated
01 Apr 97

System Requirements
TCL-7.5/Tk-4.1, KISS TNC.

Detail
The XNet software provides a variety of tools that an AX.25 lan
manager could use to analyze and manage traffic. The tools
present a graphical view of all of the traffic received at the
monitoring node allowing the observer to easily see where the
traffic flows normally and other information such as:
- Packet counts
- Node statistics
- Network Utilisation figures

The network is displayed with icons representing hosts and lines
between them representing the traffic flow. The graphical
display provides an instantly absorbable view of the traffic on
the network being monitored. Richard has more information and
sample displays at: www.qualcomm.com
<http://www.qualcomm.com/~rparry/xnet.html>.

Where and how to obtain it
You can obtain the software from: www.qualcomm.com
<http://www.qualcomm.com/~rparry/xnet/xnet-1.1.tar>

Licensing/Copyright etc.
XNET is a freeware program. It may be freely distributed.

Contributed by
Richard Parry, W9IF

5.7. monax25

Author
Skip Hansen, WB6YMH and Harold Price, NK6K.

Maintained by
Jonathon Naylor, jsn@cs.nott.ac.uk

Description
The monax25 provides a number of utilities for collecting
statistics on AX.25 channel usage.

Status
Version 1.11, Stable

Updated
01 Apr 97

System Requirements
KISS TNC.

Detail
The original ax25mon programs were written for MSDOS. This
package is a port of that software to Linux.

Where and how to obtain it
The `monax25' package may be obtained from: sunsite.unc.edu ham
applications directory
<ftp://sunsite.unc.edu/pub/Linux/apps/ham/>.

Licensing/Copyright etc.
Freely copyable, not GPL though.

5.8. splitscreen

Author
Dave Brown, N2RJT, dcb@vectorbd.com

Description
Split screen `ttylink' style program with scroll back and log to
file.

Status
Version 1.4.1, stable.

Updated
01 Apr 97

System Requirements
Requires the `ncurses' package.

Detail
The splitscreen is a unix implementation of the NOS ttylink
command. It provides a splitscreen display that makes user to
user chats much easier than the usual telnet interface. The
scroll back buffer and log to file features are useful when you
use the splitscreen program to access services like convers.

Where and how to obtain it
The `splitscreen' package is available from: sunsite.unc.edu ham applications directory
<ftp://sunsite.unc.edu/pub/Linux/apps/ham/>

Licensing/Copyright etc.
Public Domain

5.9. talk-ax25

Author
Dave Brown, N2RJT, dcb@vectorbd.com

Description
Berkeley `talk' client modified to support Linux AX.25

Status
Version 960426, working.

System Requirements
Requires the `ncurses' package.

Detail
The `talk-ax25' program is a modifed version of the conventional Berkeley `talk' program to support Linux AX.25 operation.

Where and how to obtain it
The `talk-ax25' program is available from: sunsite.unc.edu ham applications directory
<ftp://sunsite.unc.edu/pub/Linux/apps/ham/> or from:
ftp.ucsd.edu <ftp://ftp.ucsd.edu/hamradio/packet/tcpip/linux/>.

Licensing/Copyright etc.
Berkeley style. Freely distributable, copyright messages must be retained.

5.10. 7Plus for Linux

Author
Axel Bauda, DG1BBQ, DG1BBQ@DB0CL.#HB.DEU.EU

Description
Uuencode-like file coder for BBS Send and Forward of binary files.

System Requirements
none special

Detail
Provides the ability to 7Plus encode binary files to allow them to be transmitted within AX.25 BBS messages.

Where and how to obtain it
The `7pl217sr' encoder package is available from:
sunsite.unc.edu ham applications directory
<ftp://sunsite.unc.edu/pub/Linux/apps/ham/>.

Licensing/Copyright etc.
Hamware - Free for use by amateur radio use.

5.11. TNOS

Author
Brian A. Lantz, brian@lantz.com

Description
TNOS is a NOS derivative that is being actively supported and which is available for both DOS and Linux. It features many enhancements not found in other NOS versions.

Status
Version 2.21. Stable.

Updated
01 Apr 97

System Requirements
Kernel networking slip support if you want to link the normal Linux network facilities with TNOS. A kiss tnc.

Detail
Brian maintains a World Wide Web server which contains up to date information on TNOS, you can find it at www.lantz.com <http://www.lantz.com/tnos/tnos.html>.

Where and how to obtain it
The current version of TNOS is always available from: ftp.lantz.com <ftp://ftp.lantz.com/tnos/current/unix/>, sunsite.unc.edu <ftp://sunsite.unc.edu/pub/Linux/apps/ham/>, or ftp.ucsd.edu <ftp://ftp.ucsd.edu/hamradio/packet/tcpip/tnos/>.

Licensing/Copyright etc.
Free for use by amateur radio operators and educational oraganisations

5.12. N0ARY Packet BBS for UN*X

Author
Bob Arasmith, N0ARY, ported to Linux (and others) by Bob Proulx, KF0UW, rwp@fc.hp.com

Description
A packet bbs implemented under UN*X.
Status
ALPHA. Bob is running version ARY-0.9 on both Linux and HP-UX. The next version from N0ARY which is called 4.0 is in alpha test/development release. Bob has not been able to bring this online yet and is still running 0.9+kf0uw mods. Bob has about half it working with Alan Cox's AX.25 kernel which would be the desirable combination.

Updated
01 Apr 97

System Requirements.
Linux installation, C Compiler, plus HAM radio TNC hardware.

Detail
This bbs has an excellent packet user interface. It has a
compatible set of commands with the RLI bbs so users will be
familiar with it immediately. It then extends the command set
to be a very nice natural language style interface (e.g "list at
allus about KPC-3"). Many csh style bang commands are supported.
Also included is a mail interface to provide a packet to
internet gateway.

Currently you need to customize the source code for your
installation so you need some C programming proficiency.

Where and How to obtain it.
For a Linux version or for Linux information send mail to
rwp@fc.hp.com. For a SunOS version contact bob@arasmith.com.
This code is not packaged for distribution yet since it is not
past the alpha stage of development.

A version of the software is available from ftp.funet.fi
<ftp://ftp.funet.fi/pub/ham/unix/packet/n0ary/>

Licensing/Copyright
Copyright by Bob Arasmith, N0ARY, but freely redistributable.

Contributed by:
Bob Proulx, KF0UW

5.13. LBBS - Linux BBS message gateway

Author
Daryl L Miles, G7LED, dlm@frink.demon.co.uk

Description
A BBS package designed to operate with either the native AX.25
kernel code or with the Wampes package.

Status
In development, working.

Updated
01 Apr 97

System requirements
Kernel AX.25 support or the Wampes package. sendmail, CNEWS.

Detail
Daryl's aim was to build a platform on which amateurs could
build a Packet BBS to smtp gateway for Linux. I'm not sure what
the current status is as the last version I could find was dated

30 Jun 1995. The latest binary version supports:
• MBL, FBB batching, FBB compressed, FBB type 1 compressed forwarding with restart facility implemented, deferring, and rejection.

• various Linux transport mechanisms including TCP kernel, AX.25 kernel, Wampes NetROM, AX25 or TCP.

• Simple dialer, to allow connections through AX.25 or NetROM nodes.

• White Pages

• Transient handling of type A (ACK messages).

• SMTP/NNTP<>BBS gatewaying implemented heavily to the extent that the user front end will be accessing the NetNews spool to retrieve articles.

• Message filter mechanism

• Field swapping (like SWAPP.SYS in FBB).

• Multiuser/connect.

To install, I did the following:

```
# cd /usr/src
# mkdir LBBS
# tar xvfz LBBS-0.1.6A.tar.gz
# cd LBBS
# ./Install.sh
```

This created a /usr/lbbs directory. The README.Setup file suggest an order in which to configure the BBS.

Where and How to obtain it.
You can obtain the `LBBS' package from: ftp.ucsd.edu <ftp://ftp.ucsd.edu/hamradio/packet/tcpip/linux/>.

Licensing/Copyright
Freely distributable for any non-commercial Amateur Radio use only. No warranty. Will be changed to GPL when software is stable.

5.14. MBL/RLI message to NNTP and email converter.

Author
SM0OHI, pme@it.kth.se

Description
Software that will convert incoming MBL/RLI messages into either NNTP or RFC-822 formatted mail messages.

Status
Development, not yet released.

Updated
01 Apr 97

System requirements
Unknown.

Detail
This software would be ideally suited to those who want to establish a mail and news gateway between conventional tcp/ip networks and the amateur radio mail network.

Where and How to obtain it.
Not yet availale.

Licensing/Copyright
Unknown.

Contributed by:
SM0OHI

5.15. CLX Packet DX Cluster Program

Author
Franta Bendl, DJ0ZY, and Bernhard ("Ben") Buettner, DL6RAI, root@dl6rai.muc.de

Description
A PacketCluster like system running on Linux.

Status
Current version 2.07

Updated
01 Apr 97

System Requirements
Linux Kernel version 2.0 or greater, TCP/IP networking, SysV IPC. Also requires Perl and optionally Expect.

Detail
PacketCluster nodes have been available for about seven years. The original software was written by Dick Newell, AK1A, and is running under DOS. CLX is a system which clones a PacketCluster node. To the outside user commands and features are mostly identical. Remote PacketCluster nodes, which can be networked, don't see the difference between a generic PacketCluster node and CLX. So it fits well into an established network of PacketCluster nodes.

CLX is not a user application, it is network node software. As such it is not of much use for the individual amateur. SysOPs of PacketCluster nodes with some experience on both PacketCluster and Linux will find this application interesting.

Here are some of the features of CLX:

• It is fully compatible with the internal PCxx protocol and from a users point of view. It allows multitasking and different priorities.

• The software detects looping DX spots without generating endless messages. CLX filters out such duplicate information. We have implemented a concept which allows us to connect the network at multiple points, which would formerly have been called a "Cluster Loop". CLX knows of so-called "active" and "passive" links. The outcome is that more DX information is seen by CLX users.
• An interface for extending CLX with your own programs and applications.

• Extended connectivity through the use of connect scripts. CLX now can build up and maintain virtually any connection using TCP/IP, UUCP or any other communication programs.

• CLX uses modern programming concepts like shared memory for common data, lex and yacc to implement command language, shared libraries to keep binaries small, remote procedure calls for interprocess communication. It is strictly modularized with its own dedicated process for every major task.

• Comprises of several modules running as separate processes.

Where and How to obtain it
You can obtain the software from ftp.funet.fi
<ftp://ftp.funet.fi/pub/ham/unix/Linux/cluster>

There are five files that make up the package:

00Index
clx_206.tgz
clx.txt
README

Licensing/Copyright
CLX (c) by Franta Bendl (DJ0ZY) and is available for non-commercial use, but the authors want to keep track of who is using their product, so before you can actually use the software you have to ask for an encrypted callsign string to be placed in the configuration file. You must send mail to clx_us@dl6rai.muc.de to organise this.

Contributed by
Bernhard ("Ben") Buettner, DL6RAI

5.16. DPTNT Terminal and DPBOX BBS package.

Author
Mark Wahl, DL4YBG, DL4YBG@DB0GR.#BLN.DEU.EU,

wahlm@berlin.snafu.de and Joachim Schurig, DL8HBS,
DL8HBS@DB0GR.#BLN.DEU.EU, h0187akk@rz.hu-berlin.de

Description
A suite of programs that provide BBS and Terminal programs for
Linux.

Status
Stable and working.

Updated
01 Apr 97

System requirements
TNC supporting WA8DED hostmode or KISS protocols.

Detail
TNT is a full featured hostmode terminal program. Compiling it
on Linux is as difficult as untarring the source and typing
`make'. It provides both a `dumb' terminal and X11 version. It
comes with some comprehensive documentation which describes its
features in some detail. Its main features are:

Multiple sessions:
TNT supports multiple packet radio connections on virtual
screens that you can switch between. Each session window
provides split screen (seperate transmit and receive text)
operation with a status line. Commands can be entered in
either a command session, or in any terminal session using a
command key. Each of the virtual screens can be larger than
the physical screen and can be scrolled around.

Data capture, file transfer and logging:
A number of options are available for logging received text
to files. You can log transmit, receive or both to a log
file. You can overwrite or append received data to existing
files. You can use the `autobin' protocol to transmit or
receive binary files.

Remote Shell operation:
You can provide a shell to remote users so that they can
access other programs on your computer. You can also run a
program and direct its input/output to a channel so that
users can use it.

Redirection of devices to a channel:
TNT allows you to redirect input/output from a channel to a
device, a modem for example.

Umlaut conversion:
TNT provides umlaut conversion if necessary.

Remote mode:
Remote users can issue command themselves if allowed to do

so.

Socket mode:
You can configure tnt so that it opens a socket for users to telnet to that allows them operation just as you have from the console. This is useful where your linux machine is on an ethernet and you want other terminal on the net to have use of your radio.

New versions will support the Linux kernel AX.25 code.

DPBOX is a full featured BBS supporting the following features:

- F6FBB, W0RLI, TheBox style forwarding protocols.
- 8-bit transparent handling of messages using AutoBIN protocol.
- BBS data compressed to save space on disk, forwarding and downloading.
- "Live message capture" off BBS frequency, saves network traffic.
- PACSAT style bulletin broadcast transmitter and receiver.
- up to 200 simultaneous users.

Where and How to obtain it.
The `dptnt' package may be found at: ftp.funet.fi <ftp://ftp.funet.fi/pub/ham/unix/packet/dptnt/>, or ftp.tapr.org <ftp://ftp.tapr.org/pub/tapr/software_lib/Linux/>, or ftp.ucsd.edu <ftp://ftp.ucsd.edu/hamradio/packet/tcpip/incoming/>.

The Home Pages of the developers are at: DL4YBG <http://www.snafu.de/~wahlm/> and DL8HBS <http://hppool0.rz.hu-berlin.de/~h0187akk/>

Licensing/Copyright
The TNT and DPBOXT programs are covered by the GNU Public License. The TFKISS program is covered by ALAS (a german license for Amateur Radio use), and the DPBOX program is freely distributable for Amateur Radio use.

5.17. IPIP encapsulation daemon.

Name
Mike Westerhof's IPIP encapsulation daemon.

Author
Mike Westerhof KA9WSB (original code), then Bdale Garbee N3EUA (port to BSD), then Ron Atkinson N8FOW and John Paul Morrison (port to Linux), then Bdale rolled it all back together again.

Description
A daemon that will allow you to use your linux machine as an

IPIP encapsulating gateway. Note, this probably isn't necessary any more in most installations because recent kernel support a kernel device to perform encapsulation.

Status
Ron is running this code himself, and the other version have been run quite successfully.

Updated
01 Apr 97

System requirements
KISS TNC, any version of Linux supporting RAW sockets.

Detail
If you've ever used an internet gateway from your amateur packet radio you have probably been connected by an encapsulation gateway of some descpription. Most run KA9Q's NOS and DOS, but others run Unix and this daemon. It allows you to encapsulate IP within IP, so that you can 'tunnel' IP connections over the Internet. The software allows you to connect a KISS TNC to your linux machine and to have all datagrams received on it carried across the Internet to a similar gateway. Bdale has installation instructions in the package.

Where and How to obtain it.
This software is available from the col.hp.com <ftp:///col.hp.com/hamradio/packet/etc/ipip/ipip.tar.gz> ftp site.

Licensing/Copyright etc.
Freely distributable, though Bdale asks that if you use the code and like it you might send him a QSL card or a postcard.

Contributed by:
Ron Atkinson, N8FOW, and Bdale Garbee, N3EUA

Note:
You may want to consider using kernel based tunnel daemon now instead.

5.18. AXIP encapsulation daemon.

Name
Mike Westerhof's AXIP encapsulation daemon.

Author
Mike Westerhof KA9WSB, ported to Linux by Ron Atkinson N8FOW.

Description
A daemon that will allow you to use your linux machine as an AXIP encapsulating gateway.

Status
Not properly tested, but assumed to work ok.

Updated
01 Apr 97

System requirements
KISS TNC, any version of Linux supporting RAW sockets.

Detail
This daemon is the partner to the IPIP encapsulation daemon. It allows you to encapsulate AX.25 frames in IP to carry them across the Internet. This is useful for linking AX.25 networks in remote areas. Ron has supplied a Makefile for linux, and with it the software compiled without errors on my system running a recent version kernel. Ron has also written some README files which give you the detail necessary to compile the system and the original documentation describes how to configure it.

Where and How to obtain it.
This software is available in the sunsite.unc.edu ham apps directory <ftp://sunsite.unc.edu/pub/Linux/apps/ham/ax25ip.tar.gz>. An enhanced version of this software is included in recent versions of the Linux AX.25 utilities. Refer to the AX25-HOWTO <http://sunsite.unc.edu/LDP/HOWTO/AX25-HOWTO.html> for more information.

Licensing/Copyright etc.
Freely distributable so long as the original copyright notice is not removed.

Contributed by:
Ron Atkinson, N8FOW

5.19. Ping-Pong Convers Server

Name
Fred Baumgartens Convers Server for Linux.

Author
Fred Baumgarten, DC6IQ, dc6iq@insu1.etec.uni-karlsruhe.de, and Brian Lantz brian@lantz.com.

Description
This is a version of the convers server that allows multiple users to simultaneously chat with each other in a round-table style conversation. It is compatible with the NOS convers servers, but provides extra facilities such as saving/restoring of Personal Text and Chanel Topics. Brian Lantz has further enhanced the software with additional features.

Status
In use of a number of popular convers servers, appears very stable.

Updated
01 Apr 97

System requirements.
Linux, GNU make, C compiler.

Detail.
Complete installation instructions are included in the INSTALL
file that is included in the distribution.

Where and How to obtain it.
A distribution of this software is available at sunsite.unc.edu
<ftp://sunsite.unc.edu/pub/Linux/apps/ham/convers/>. The home of
the software is at insu1.etec.uni-karlsruhe.de ftp server
<ftp://insu1.etec.uni-karlsruhe.de/pub/hamradio/convers/convers>

Licensing/Copyright etc.
Presumably copyright Fred Baumgarten (not specifically stated),
but some portions appear to be free for non-commercial use and
copying provided the copyright notices stay intact.

5.20. RSPF Daemon

Name
RSPF - Radio Shortest Path First routing daemon for Linux

Author
Craig Small vk2xlz csmall@triode.apana.org.au

Description
An implementation of the Radio Shortest path First routing
protocol for linux. The daemon supports version 2.2 of the
protocol which corrects a lot of bugs and problems that were
present in version 2.1.

Status
Alpha - running, needs testing and bug reports. Current version
is 0.08

Updated
01 Apr 97

System requirements.
Requires Alan Cox's kernel based AX.25 code.

Detail
This program will allow Linux to become an RSPF router. It
addresses some of the quirks of RSPF v2.1, the version in NOS
which means that it is incompatible with the NOS version. It
will also allows remote/local queries via a tcp session for
debugging and diagnostic purposes.

Where and How to obtain it.
Current versions are always available from sunsite.unc.edu
<ftp://sunsite.unc.edu/pub/Linux/apps/ham/> or ftp.ucsd.edu

<ftp://ftp.ucsd.edu/hamradio/packet/tcpip/incoming> or from the
author.

Licensing/Copyright
GNU Public License vers 2.0

Contributed by:
Craig Small, VK2XLZ

5.21. Michael Westfall's TTYLINK Daemon

Name
ttylinkd - a ttylink daemon for Linux.

Author
Michael Westfall, N6KUY, mwestfal@.csci.csusb.edu

Description
A split screen terminal program that listens on the ttylink port
and accepts incoming connection requests.

Status
Seems to work fine.

Updated
01 Apr 97

System requirements
none special.

Detail
This is a standalone program that does require you to change the
configuration of your system at all. If you have root access on
your machine then you run the program in a VT or in an XTerm and
it will clear the screen and wait for an incoming connection on
port 87 (ttylink). When a connection is received it will provide
you with a split screen display with which to communicate with
the calling person.

Where and How to obtain it.
You can obtain ttylinkd from: sunsite.unc.edu
<ftp://sunsite.unc.edu/pub/Linux/apps/ham/ttylinkd.tgz> or
ftp.ucsd.edu
<ftp://ftp.ucsd.edu/hamradio/packet/tcpip/incoming/ttylinkd.tgz>.

Licensing/Copyright
Unknown, presumed freely distributable.

5.22. Craig Small's TTYLINK Daemon

Name
ttylinkd - a ttylink daemon for Linux.

Author
Craig Small, VK2XLZ, csmall@triode.apana.org.au

Description
A daemon to accept a ttylink (port 87) tcp/ip connection and convert it into a talk request for a user on the host machine. This may also be configured for use with the ax25d program so that AX.25 users may also make use of it to connect to you.

Status
Alpha, but working.

Updated
01 Apr 97

System requirements.
Kernel networking support with AX.25 support if desired.

Detail
Because the talk protocol is a non-standard, that is it isn't actually defined anywhere (except the source), the ttylink protocol from NOS has become the defacto standard, at least for amateurs, to provide keyboard to keyboard communication over tcp/ip. This daemon fills the need for something to answer ttylink requests to linux machines.

Where and How to obtain it.
You can obtain the latest version of ttylinkd from:
sunsite.unc.edu <ftp://sunsite.unc.edu/pub/Linux/apps/ham/> or
ftp.ucsd.edu
<ftp://ftp.ucsd.edu/hamradio/packet/tcpip/incoming>.

An slightly enhanced version of this software is now included in the Linux AX25 utilities package.

Licensing/Copyright
GNU Public License vers 2.0

6. Morse Code

Software for use in conjunction with, or for facilitating Morse communication.

6.1. Pileup

Author
Richard Everitt G4ZFE richard@babbage.demon.co.uk. Based on sccw by Steve Merrifield.

Description
CW pileup training program

Status
v1.0. Stable but extra development planned.

Updated
01 Apr 97

System requirements
Linux supported sound card

Detail
CW pileup trainer (similar to PED) based on sccw. Up to 9
stations calling at once with variable CW speed and tone/volume
to simulate a pileup. Callsigns are taken from the 1996 CQ WW
CW contest entry of M6A to add some realism.

I fed /usr/dict/words to the program and it was quite a chuckle.
So even if you aren't into Morse it is worth trying out just for
the giggle.

Where and How to obtain it.
You can obtain the pileup package from its home site at: Pileup
Home Page <http://www.babbage.demon.co.uk/pileup.html> or
sunsite.unc.edu <ftp://sunsite.unc.edu/pub/Linux/apps/ham/>

Licensing/Copyright
GNU GPL

Contributed by
Richard Everitt G4ZFE richard@babbage.demon.co.uk.

6.2. bip

Author
Marcin Skubiszewski, Marcin.Skubiszewski@inria.fr. 24 rue de
l'Oasis, 92800 Puteaux, France

Description
A program to learn Morse code (for various Unix-like platforms)

- --- END Linux HAM HOWTO part 1/2 ---

1984. Manual for Gonset Comm. III

Newsgroup: rec.radio.amateur.misc
Date: 1997-11-03 00:00:00 UTC
From: w6lac@webtv.net
Message-ID: <63m88f$n4t$1@newsd-113.bryant.webtv.net>
Source record: 187551

I ahve a Gonset Communicator III which works well on the a.c.cord, but I don't have a 12 volt
dc cord. I have a Jones Plug, and if I had a schematic or Manual, I could quite easily
assemble a dc cord. I need to know how to
jumper the pins inside the Jones plug. If you have this information, I will gladly pay your price. Thanks, w6lac@amsat.org (814)964-
2634, 311 Water St. Johnsonburg, PA 15845

- --- BEGIN Linux HAM HOWTO part 2/2 ---

Status
Production release

Updated
01 Apr 97

System requirements
Works on many Unix-like systems, including Linux. On linux it
works with or without X11 or a Soundcard.

Detail
bip offers a very wide range of options that make it very
suitable as a code practice program. It can send text from text
file or random character groups but it has a range of other
features. Some of these are
```

- Morse compliant with ARRL specification
- adjustable volume and tone
- adjustable speed, including Farenheit method
- Jitter feature to simulate hand sent morse

```
Where and How to obtain it.
Not available online, but anyone can write to
Marcin.Skubiszewski@inria.fr for a copy of the source code.

Licensing/Copyright
Shareware $10.

Contributed by
Marcin Skubiszewski, Marcin.Skubiszewski@inria.fr.

6.3. cw2hex
```

Author
G. Forrest Cook, WB0RIO, cook@stout.atd.ucar.edu

Description
cw2hex converts ascii text into Hex files for making keyer
EPROMS.
Status
version 1.1 is tested and ready to go.

Updated
01 Apr 97

System requirements
standalone textual program, requires gcc to compile

Detail
This program takes a textual input and converts it to morse
encoded characters in the form of a standard Intel HEX file. The
Hex file can be used to program an EPROM which can then be
connected to a simple circuit that generates canned messages.
Possible uses are CW calling machines and CW beacon transmitter
keyers. There is an accompanying schematic for a keyer circuit
that works with this software.

Where and How to obtain it.
You can obtain cw2hex from www.atd.ucar.edu
<http://www.atd.ucar.edu/homes/cook/software.html>

Licensing/Copyright
GNU Copyleft

Contributed by:
G. Forrest Cook, WB0RIO

6.4. SoundCard CW

Author
Steve Merrifield, VK3ESM, sjm@ee.latrobe.edu.au

Description
Morse Code practice for Linux, using a soundcard

Status
Completed

Updated
01 Apr 97

System requirements
Linux supported soundcard with FM support.

Detail
This program generates morse code characters using the
soundcard. It does not rely on the Linux virtual console sound
features and may therefore be used either with X11 or from a
virtual console. Its features include:

- adjustable frequency
- adjustable volume
- adjustable speed
- adjustable delay
- adjustable group count
- generation of random groups
- able to decode and play text files

Where and How to obtain it.
The software may be obtained from its home site at:
livewire.ee.latrobe.edu.au
<http://livewire.ee.latrobe.edu.au/~sjm/morse>.

Copyright/Licensing
Berkeley style copyright. The software may be freely used so
long as credit is given to the original author.

Contributed by:
Steve Merrifield, VK3ESM

6.5. GW4PTS Morse trainer.

Author
Alan Cox, GW4PTS, alan@lxorguk.ukuu.org.uk

Description
A Morse Code trainer that uses the PC internal speaker

Status
stable, works quite well, unfinished.

Updated
01 Apr 97

System requirements
Linux, any version

Detail
Alan wrote this small program in only an hour. It is quite neat,
and allows you to play morse at a range of speeds and
frequencies through the PC internal speaker. You can specify the
text to be played either from the command line, from a file, or
the program is capable of generating random character groups. As
it stands you must invoke the program from a Linux Virtual
Console, as it relies on certain kernel calls to produce the
sound, and these don't work as easily from an XTerm. As it
sounds each character it lists the character in verbal form (Di,
Dit, Dah etc.) to the screen. Alan is hoping that someone will
take the code and enhance it with the features he has listed in
the comments at the head of the source file.

Where and How to obtain it.
I've had a large number of responses from people seeking this code, so I've obtained Alan's permission to make it available. You can obtain it from sunsite.unc.edu <ftp://sunsite.unc.edu/pub/Linux/apps/ham/GW4PTS.morse.tar.z>.

Copyright/Licensing
GNU Public License 2, freely redistributable, no warranty.

6.6. morse (aka superiormorse)

Author
Joe Dellinger, joe@sep.stanford.edu, jdellinger@trc.amoco.com, joe@soest.hawaii.edu

Description
A morse-code practice program for UNIX workstations.
Status
Quite stable

Updated
01 Apr 97

System Requirements
Currently supports X11, Sun4, HP, Indigo, and Linux

Detail
Lots of features and options. Includes a utility for generating random content QSOs, similar to those used in the FCC exams.

Where and How to obtain it:
morse.tar.gz can be obtained from: sepftp.standford.edu <ftp://sepftp.stanford.edu/pub/UNIX_utils/morse/>.

Licensing/Copyright
Freely Redistributable

Contributed by:
Brian Suggs, AC6GV, and John Gotts

7. AMTOR Software.

Software for use in conjunction with, or for facilitating AMTOR.

8. PACTOR Software.

Software for use in conjunction with, or for facilitating PACTOR.

9. Slow Scan Television Software.

Software for use in conjunction with, or for facilitating Slow Scan Television.

10. Facsimile Software.

Software for use in conjunction with, or for facilitating Facsimile.

11. Design and Construction Software.

Software to assist in the design and construction of amateur radio related things. Antenna, Circuit Board, Filter, and QSL card design packages are all good candidates for this section.

11.1. oscope - Enhanced Software Oscillosope

Author
Tim Witham, twitham@pcocd2.intel.com

Description
`oscope' is a digital 44kHz oscilloscope for /dev/dsp. It is based on Jeff Tranter's original work described below but has been significantly enhanced.

Status
First production release.
Updated
01 Apr 97

System requirements
Requires a kernel supported sound card that can do 8800Hz - 44kHz, the `libsx' package to build the xoscope X11 client, the `svgalib' package to build console-based oscope, the `g3vga' package to add console text, and a mixing program to select input source and level.

Detail
Includes oscope for SVGA console display and xoscope, an X11 client. Features include 8-bit sampling of 2 channels at 44kHz, 5 us/div to 5 ms/div time scale, 5 automatic measurements, built-in and external math functions including sum, diff, avg, and FFT, 26 memory buffers, 8 simultaneous signal displays, and file save/load.

Where and How to obtain it.
The oscope package may be obtained from either www.bobsplace.com <http://www.bobsplace.com/~twitham/> or sunsite.unc.edu <ftp://sunsite.unc.edu/pub/Linux/apps/circuits/>.

Licensing/Copyright
GNU Public License, Freely redistributable, No warranty.

Contributed by:
Tim Witham

11.2. Software Oscilloscope

Author
Jeff Tranter, Jeff_Tranter@Mitel.COM

Description
Scope is a simple software emulation of an oscilloscope. It graphically displays voltage as a function of time.

Status
ALPHA. First release.

Updated
01 Apr 97

System requirements
Sound card with input capability supported by the kernel sound driver. SVGALIB is used to do the display work.

Detail
Scope uses the /dev/dsp device to take audio in from the soundcard and displays it on the screen in a manner similar to an oscilloscope. Jeff claims Scope was written more for amusement value than for any serious purpose.

Where and How to obtain it.
You can obtain source, makefile and man page for Scope in the scope package from: sunsite.unc.edu <ftp://sunsite.unc.edu/pub/Linux/apps/circuits/>

Licensing/Copyright
GNU Public License, Freely redistributable, No warranty.

11.3. Printed Circuit Board design tool.

Author
Thomas Nau, Thomas.Nau@rz.uni-ulm.de

Description
An X11 based interactive printed circuit board design tool.

Status
Vers 1.4.1, stable.

Updated
01 Apr 97

System requirements
X11 Windowing system and a recent flex program.

Detail
The pcb package comes with good instructions on how to compile and install the software. I compiled it without error under X11R6. It comes with package layouts for a range of popular components and the example layout nicely demonstrates the capabilities of the package.

Where and How to obtain it.
You can obtain the pcb package from: ftp.uni-ulm.de <ftp://ftp.uni-ulm.de/pub/pcb/current> or from: sunsite.unc.edu <ftp://sunsite.unc.edu/pub/Linux/apps/circuits/>

Licensing/Copyright
GNU Public License

11.4. Chipmunk circuit design and simulation tool

Author
Dave Gillespie daveg@synaptics.com and John Lazzaro
lazzaro@cs.berkeley.edu

Description
Schematic Entry and Digital or Analog Simulation tool suite.

Status
vers 5.10, stable.

Updated
01 Apr 97

System requirements
X11 windowing system and older (XFree86-2.x) libs, 8 bpp (256
color) only

Detail
I haven't tried this one out yet. It is a suite of tools for
circuit design and simulation.

Where and How to obtain it.
You can obtain the Chipmunk package from its home site at
www.pcmp.caltech.edu <http://www.pcmp.caltech.edu/chipmunk/>.

Licensing/Copyright
Modified GNU Public License, Caltech specifically disclaimed
from liability.

11.5. irsim

Author
Dmitry Teytelman, dim@leland.stanford.edu

Description
An event-driven logic-level simulator for MOS circuits

Status
Version 9.2, production.

Updated
01 Apr 97

System Requirements
X-Windows.

Detail
irsim is an X11 based simulator for MOS circuits. It has two
simulation modes, either switch where each transistor is
modelled as a voltage controlled switch, or linear where each
transistor is modelled as a resistor in series with a voltage
controlled switch, and each node has a capacitance.

Where and How to obtain it.
You can obtain the irsim package from: sunsite.unc.edu
<ftp://sunsite.unc.edu/pub/Linux/apps/circuits/>.

Licensing/Copyright
Freely Redistributable

11.6. Spice vers. 3f4

Author
University of California, Berkeley, port by
Jeff@RyeHam.EE.Ryerson.Ca

Description
Spice is an analog circuit emulator.

Status
Stable release.

Updated
01 Apr 97

System requirements
Unknown.

Detail
Spice allows you to design and test circuits in a computer
modelled environment to see how they will behave without having
to touch a soldering iron, or solder. A readme file comes with
the package. To install I did the following:

```
# cd /usr/src
# gzip -dc spice3f4.tar.gz | tar xvf -
# cd spice3f4
# ./utils/build linux
# ./utils/build linux install
```

Where and How to obtain it.
You can obtain version 3f4 of the spice package from:
sunsite.unc.edu
<ftp://sunsite.unc.edu/pub/Linux/apps/circuits/spice3f4.tar.gz>

Licensing/Copyright
Copyright held by University California, Berkeley. Freely
redistributable provided you are not unfriendly to the U.S.

11.7. svgafft - Spectrum analyser

Author
Andrew Veliath, veliaa@rpi.edu

Description
svgafft is a spectrum analyser for Linux.

Status
Alpha, but usable.

Updated
01 Apr 97

System requirements
F77, Linux supported sound card, svgalib, a 486DX33 or better.

Detail
svgafft uses the /dev/dsp device and currently supports 16-bit and 8-bit sample resolution on supported Linux soundcards. It's display is something akin to a high-end spectrum analyzer with falling peaks. Andrew is working on an X-Motif version to be released soon.

Where and How to obtain it:
You can find the svgafft package at tsx-11.mit.edu <ftp://tsx-11.mit.edu/pub/linux/ALPHA/svgafft/> and sunsite.unc.edu <ftp://sunsite.unc.edu/pub/Linux/apps/sound/freqs/>.

Licensing/Copyright
GNU Public License.

Contributed by:
Andrew Veliath

11.8. Audio Spectrum Analyser

Author
Philip VanBaren, phillipv@eecs.umich.edu

Description
An audio spectrum analyser for Linux SVGALIB or X-Windows.

Status
Alpha but usable

Updated
01 Apr 97

System requirements
Linux supported sound card, svgalib or X-Windows.

Detail
freq5a1 uses the /dev/dsp device, samples the incoming audio, performs a fast fourier transform on the data and displays the output in either 640x480 VGA or an X-Window.

Where and How to obtain it:
You can obtain freq5a1.tar.gz from: sunsite.unc.edu <ftp://sunsite.unc.edu/pub/Linux/apps/sound/freqs/> or by mail from the author.

Licensing/Copyright
GNU Public License vers 2.0.

11.9. ObjectProDSP

Author
Paul Budnik, Mountain Math Software, support@mtnmath.com

Description
ObjectProDSP is an object oriented tool for design, development and implementation of Digital Signal Processing. It allows you to design your DSP network, runs simulations with oscilloscope style plots and listings at any point in the network.

Status
Alpha version 0.2.

Updated
01 Apr 97

System requirements
XFree86 3.1.1 or better, g++ from gcc 2.6.3 or better, 32Mb of total memory (real+swap) recommended, 6Mb of disk space for minimum configuration, 40Mb disk for full installation.

Detail
There are a number of files that comprise the package. There is a binary only package for Linux which I recommend you start with. There is comprehensive documentation included from which you can obtain installation and operation instructions.

Where and How to obtain it.
You can obtain ObjectProDSP from: sunsite.unc.edu <ftp://sunsite.unc.edu/pub/Linux/devel/opd>, tsx-11.mit.edu <ftp://tsx-11.mit.edu/pub/linux/packages/dsp>, or ftp.funet.fi <ftp://ftp.funet.fi/pub/Linux/util/electronics/opd>. There are a number of files that comprise the package, some of the quite large so be prepared.

Licensing/Copyright
GNU Public License vers 2.0., Commercial licensing available.

11.10. bpf - bandpass filter calculator

Author
G. Forrest Cook, WB0RIO, cook@stout.atd.ucar.edu

Description
bpf assists in the design of two pole bandpass filters.

Status
Stable.
Updated
01 Apr 97

System requirements
standalone textual program, requires gcc to compile

Detail
bpf is a simple text interface program that offers you a menu of

options of different ways of inputting design data. After you've entered the data it presents a text based circuit diagram and a list of the appropriate component values. It sounds simple, and it is, but it's also quite cute, and bound to be useful.

Where and How to obtain it.
You can obtain bpf.tar.Z from www.atd.ucar.edu <http://www.atd.ucar.edu/homes/cook/software.html>

Licensing/Copyright
GNU Copyleft

12. Training/Educational Software.

Software to assist in education or training for amateur radio. Morse Code tutorials, technical examination database, Computer Based Training software, and the like are listed here.

13. Miscellaneous Software.

Software that didn't neatly fit into any other category.

13.1. twclock - World Time Clock for Hams

Author
Ted Williams, ted@bluestone.com

Description
A world clock designed for ham radio operators

Status
Version 1.0, stable.

Updated
01 Apr 97

System requirements
Motif libraries if you want to recompile it. Just X11 if you want to run the precompiled binaries.

Detail
Anyone who needs the time of day someplace else in the world, or anyone tired of the same old look of their clock will find this software of interest. It is implemented with Motif widgets, and will displays the current time in major cities around the world.

Where and How to obtain it.
You can obtain the twclock package from sunsite.unc.edu <ftp://sunsite.unc.edu/pub/Linux/apps/ham/>.

Licensing/Copyright
GNU GPL

13.2. Chirp - Contest Logger

Author
Kenneth E. Harker, N1PVB, kharker@cs.utexas.edu

Description
Contest logging program

Status
Active development

Updated
01 Apr 97

System requirements
Requires ncurses library and header files to compile.

Detail
A linux based contest logging program. Kenneth is writing it so
he can use it on his laptop while working VHF contests. He is
also writing it as an excuse to learn ncurses programming. His
goal is a general purpose contest logger that a user can specify
new contests in as they come about. It supports all bands and
modes.

Where and How to obtain it.
When version 1.0 is available, you should be able to find it
from the Chirp Home Page
<http://www.cs.utexas.edu/users/kharker/chirp/>

Licensing/Copyright
Probably GNU GPL.

Contributed by
Kenneth E. Harker, N1PVB, kharker@cs.utexas.edu

13.3. Contest - Contest Logging Program

Author
Carsten Wilderotter, carsten.wilderotter@student.uni-ulm.de

Description
A logfile program for Contest operation

Status
Version 0.0.1, Alpha

Updated
01 Apr 97

System requirements
No special requirements.

Detail
Linux contest logging program.

Where and How to obtain it.
You can obtain the contest package from: sunsite.unc.edu

<ftp://sunsite.unc.edu/pub/Linux/apps/ham/>

Licensing/Copyright
GNU GPL

13.4. Linux for HAMS CD-ROM

Author
Bruce Perens, bruce@pixar.com

Description
A complete linux distribution on CDROM specifically designed for Amateur Radio operators.

Status
Not yet available.

Updated
01 Apr 97

System requirements.
Linux compatible hardware, some software will obviously require specialised hardware to operate. No additional software should be required.

Detail
A complete Linux distribution specifically catering for Amateur Radio operators. It will include a fully featured Linux installationplus a range of amateur radio specific software such as those listed in this document. Bruce has detail and updated status report available at the LinuxForHams WWW page <http://www.rahul.net/perens/LinuxForHams>. Bruce has been extremely busy with the Debian project and this has reduced his available time to just about zero. He does still intend to pursue this. Why don't you help out by maintaining one of the software packages as Debian packages ? More information from the Debian Web Site <http://www.debian.org/>.

Where and how to obtain it:
It isn't yet available, details will be made available when it is released.

Licensing/Copyright
GNU Public License.

Contributed by:
Bruce Perens

13.5. SunClock

Author
John Mackin, john@cs.su.oz.AU

Description
A clock that will show you instantly what parts of the globe are

exposed by sunlight and what parts aren't.

Status
Released.

Updated
01 Apr 97

System requirements.
X-Windows.

Detail
sunclock is another of those desktop gadgets that most people think look nice but really don't have a lot of use for. I use sunclock to obtain an at-a-glance indication of the time anywhere in the world. In its iconic form it sits in a small Mercator projection. When maximised it produces the same image but obviously larger with slightly more detail. It also displays the date, local time and UTC. sunclock actually calculates mathematically what parts of globe are sunlit and which aren't, it seems quite accurate, so long as you assume the earth has no atmosphere.

Where and How to obtain it.
I haven't seen any precompiled sunclock binaries for Linux about, so check your nearest archie server. sunclock compiled straight out of the box for me.

Licensing/Copyright
Public Domain and may be freely copied as long as the notices at the top of sunclock.c remain intact.

13.6. Xearth

Author
Kirk Johnson, tuna@cag.lcs.mit.edu

Description
A rotating earth for X-windows root window. It has real life shading, and options for geostatic view, and non geostatic view. A prettier and more modern version of sunclock but requires a bit more processing power.

Status
Version 1.0.

Updated
01 Apr 97

System requirements.
X-Windows.

Detail
xearth is a sophisticated program which draws a colour picture

of the earth onto your X Windows display. It offers either an orthographic view as you would see from space or the map like mercator projection. You have a number of options in determining the behaviour of the view. The details are available from the xearth Home Page
<ttp://www.cs.colorado.edu/~tuna/xearth/index.html> and in the documentation which is supplied with the package.

Where and How to obtain it.
The source can be obtained from its home site at cag.lcs.mit.edu <ftp://cag.lcs.mit.edu/pub/tuna> or just about any X11/contrib directory.

Licensing/Copyright
Copyright (C) 1989, 1990, 1993 by Kirk Lauritz Johnson. The copyright notice included states that xearth is freely redistributable so long as the copyright notice is left intact, and be included in documentation.

Contributed by:
Kirk Johnson

14. How to contribute or update an entry.

I'd like for this list to be as complete and up-to-date as possible. So I'm keen to hear about any developments or products that I don't already know about, or that the entry is obselete or outdated for.

What I'd like as a minimum set of requirement would be something like the following:

Name
The name of the software in question.

Author
Who wrote, or ported the software. An email address, or some other means of contacting them is also essential.

Description
A single line description of what the software does.

Status
An indication of the software's status. Is it still in testing? Is it a production release? Is it still in the design stage?

System requirements
What does the software require to run? Does it require X-Windows? Does it need a soundcard? Does it need a certain version of kernel? Does it need other software to support it?

Detail
I'm not keen on including a large amount of detail on each piece of software as this would consume a lot of time reading and trying to keep up to date. So instead what I'd like to list is

what makes this software unique, anything special about it.
Perhaps its most outstanding features, that sort of thing.

Where and How to obtain it.
If the software is freely distributable then ftp details would
be great. If it is commercial software then the name of the
company distributing the software, and an address or telephone
number. If it is available only by some other means, say mail
order, then details on where and how to obtain it.

Licensing/Copyright
Is the software Copyleft? Copyright? Shareware? Public Domain?
Restricted in use in any way?

Don't worry if you don't know all of these details, just send me what
you do know and I'll list what I can. I'd rather have an incomplete
listing than no listing at all.

Please mail any contributions to:

terry@perf.no.itg.telstra.com.au

I'd list a packet radio address too but I'm still not properly
operational again yet after moving house.

15. Discussion relating to Amateur Radio and Linux.

There are various places that discussion relating to Amateur Radio and
Linux take place. They take place in the comp.os.linux.* newsgroups,
they also take place on the linux-hams list on vger.rutgers.edu.
Other places where they are held include the tcp-group mailing list at
ucsd.edu (the home of amateur radio tcp/ip discussions).
To join the Linux linux-hams mail list, send mail to:

Majordomo@vger.rutgers.edu

with the line:

subscribe linux-hams

in the message body. The subject line is ignored.

To join the tcp-group send mail to:

listserver@ucsd.edu

with the line:

subscribe tcp-group

in the body of the text.

Note: Please remember that the tcp-group is primarily for discussion
of the use of advanced protocols, of which tcp/ip is one, in Amateur
Radio. Linux specific questions should not ordinarily go there.

16. Copyright.

The HAM-HOWTO, an introduction to Amateur Radio software available for Linux and information on how to configure some of it. Copyright (c) 1995,1996 Terry Dawson.

This program is free software; you can redistribute it and/or modify it under the terms of the GNU General Public License as published by the Free Software Foundation; either version 2 of the License, or (at your option) any later version.

2 meter Campus Repeater

Here is the perfect inexpensive solution for establishing a
college campus repeater on 2 meters.

Package consists of the separate units.
VHF Receive & Transmit units link via UHF.
Use two dorms across campus and NO DUPLEXER is needed.

Each unit is a clean GE MVP (12vdc) Size 8x4x10

VHF Tx 25+ watts
UHF Tx 20+ watts (though you will probably only run 1 or 2 watts)

Fully converted for link operation and tuned to hams bands.
Basic keying circuitry included.
Ready to go into service. Only crystals are needed.

Includes: CG/PL tone board channel elements

$ 225 plus USA shipping

John K3NXU jlam@netrax.net

For more in depth info: http://www.netrax.net/~jlam/r-4sale.html

>I am looking for the wide RX
>software mod using the ADMS
>template file.

1. Make a .TPL (or .RDF file) from your FT50
2. Change with a HEX editor the Byte on Adress CE7 to be 06 (Freeband)
3. Upload it to the FT50, done.

Take a look at http:// members.aol.com/aeimn/ft50/index.htm to get the details.

Greetings, ...

Obviously I seem to be more out of touch than I thought I am. I was
reading about phase 3 serveral years ago. How come it is still not up
yet?
Perhaps someone could bring me up to date with my missing knowledge.

Why? This is the .policy newsgroup where such policy
questions are discussed.

>I hate CW. But, I wanted an extra class license. Thus, I toughed it out, spent
> the time and effort and passed the test. Not by much, but I passed back in the
> "good old days" with an FCC examiner. If I can do it, as much as I hate CW,
> then so can all of these "Morse code is obsolete", "HF is codeless in other
> countries", wannabees. This ain't Japan and it ain't Fiji or anything but the
> USA. We got rules here regarding CW and HF priviledges. If you like the rules
> elsewhere . . . . .

We're just working and talking here to change the
rules. Last time I checked, this was still the USA and such
efforts were not prohibited by any laws or otherwise.

>So, please, spend your time learning, practicing and passing OR go (quietly)
> away.

Well I've practiced enough to get to Advanced. If I want Extra
I'll learn 20wpm. If I prefer for now to argue in favor of changing
the licensing requirments I will do so...and I do choose to
continue to post such comments here.

> And quit wasting all this space bitching about a license requirement
> that you are unwilling to master.

In the same vain that you wish me and others to just go away, I'll
simply state that it is your option to quit reading this newsgroup
if you want to rid yourself of these posts. The choice, sir, is
yours.

> The Morse code ain't dead yet.

No one said it was. Use it all you like. It should, however,
be dead as a requirment. THAT is the issue, not the use
of morse.

>However, the
> horse you have been beating died over a month ago.

Did I miss some profound happening a month ago to which
you refer?

>Eat it or bury it, but
> whatever you do, please just get it the heck outta here.

Nah, just too much enjoyment here for me to stop.

Apparently Lee can't think of any reason an amateur might do experimentation
except to further some commercial interest. Does that sound like Lee might
be an appliance operator? Yup.

You were arguing for a relaxation of the code requirement in the USA weren't you? So, why is it unfortunate? And, what do hams in other countries have to do with it? (Other than, if they are wise, being against it)

>Seems to me that our license hierarchy is predominently based on your ability
>to pass theory examinations -- getting an "Extra" class license requires you
>to take and pass five different theory examinations, but it only requires you
>to pass a single 20wpm code test

This is also nonsense. The time spent by most hams to become proficient
at 20 wpm well exceeds the time required to pass easily the 5 theory tests
presently available. I also note that until the FCC split the tech test away
from the general test, there were only 4 tests. Acquiring morse skills may
demonstrate a certain level of dedication, but it's a skill, one that has
little justification except some people love the concept of international
morse code even if they never use or rarely use it.

You might be in for a hell of a surprise, MD. It took me a lot less time to become proficient in IBM 704 machine language programing than it did to become proficient in Morse. And I had to learn it out of the IBM manuals because nobody wanted to take the time to teach a kid to program in it.

It impressed the old guys that I figured out on my own how to optimize the code placement on the drum so that it was just coming under the read heads when the processor was ready for it too. I knew the number of T cycles every instruction took without even thinking about it.

Lest the above sound like a brag, I know several kids today who are better programmers than me. And I've been at it a very long time. Kids seem to find it very easy to think in terms of the machine. They grasp right away that the machine does exactly what they tell it to do, and not what they really meant it to do. That's something adults often have a hard time really accepting. Programming is just a form of Simon Says, and Simon is very literal minded, as are most kids.

Wireless digital breaks that umbilical. It could have been wireless digital
pioneered and developed by amateurs, but it will be done instead by
the likes of Iridium, Teledesic, Nextel, and poor old AT&T. The BOCs
have lost their monopoly, and their copper web will become "quaint",
just as Morse Code has become quaint.

Well, the wireless telcom revolution will sap amateur radio
of its appliance operators (already they have awards for working
100 countries via the internet, and internet "dxpeditions" are being
planned to godforsaken rocks to supply the "rare ones"). But you
can't tinker with the networks of the commercial boys. They call it
"hacking" and take a very dim view of it. But amateur radio calls it
"advancing the SOTA" and names it as a charter purpose. As long
as there are those who wish to experiment, develop, and innovate,
there will be people who wish to be amateur radio operators. Lets
just hope there will always be an amateur radio for them.

And discussed and discussed and discussed and discussed.

And this ain't .policy it is rec.radio.amateur.MISC !

If you would/could keep the no-code discussion on .POLICY, I would shake your hand AND buy your lunch! But, these posts continue to show up on .scanner (both), .misc and others. I made my original and only post here in response to the numerous other posts in .misc, .scanner, etc on the no-code subject. I am willing to bet that you folks have no intention or desire to keep the "discussion" to .policy. But, it is a bet I would like to lose.

>We're just working and talking here to change the
>rules. Last time I checked, this was still the USA and such
>efforts were not prohibited by any laws or otherwise.
>
>

No one said anything to keep you from doing so. However, is it really necessary to do it every day, day after day after day? And in groups where it is ill-suited?

> If I prefer for now to argue in favor of changing
>the licensing requirments I will do so...and I do choose to
>continue to post such comments here.

Why here in .misc?
Sure it is your right to do so, but why must everyone else have to be burdened with sorting through dozens of posts a day on a subject which is of no interest to them? Wouldn't you be better able to muster the no-code troops some other way?

> I'll
>simply state that it is your option to quit reading this newsgroup
>if you want to rid yourself of these posts. The choice, sir, is
>yours.

Yep, and it is also my choice to be sick of you folks beating a dead horse. By now, I am confident that everyone on the newsgroups knows your position. So, why continue to bang the drum and risk alienating any friends of your "cause"?

By the way, up to now, I have not read ANY of the code/no-code posts, just tripped over them again and again.

>The Morse code ain't dead yet.

>No one said it was. Use it all you like.

Maybe you missed it the first time: I hate CW!!!!!!!!! I hated it during all those lunch breaks, nights and weekends I spent putting that requirement behind me. I am not a fan of CW. But, I do think it serves to separate those who are serious about increased privileges from those who are not. And, what is wrong with that? This is the USA, land of opportunity. Not land of 'everybody has to have Extra class privileges', comrade.

>It should, however,
>be dead as a requirment. THAT is the issue, not the use
>of morse.

Who says so? You? A bunch of folks who can't or won't (more likely) put forth the effort required to reach the license level they desire? There is no reason to change this requirement unless and until there are no CW sub-bands and it is agreed to internationally.
Which, I guess, is what you are trying to do? This issue seems to have many parallels to the other flawed social engineering causes.

>Did I miss some profound happening a month ago to which
>you refer?
>
>

Yep, the horse died. It held up for a while, then it croaked. Which horse, you ask? The no-code horse you folks have been beating daily for so long. If you can't smell it by now, you might want to consider starting a "No Nose International".

>Nah, just too much enjoyment here for me to stop.
>
>

Yep, I was right again. Another crusader. You speak Greenpeace?

. >Bill Sohl K2UNK
>ARRL Local Gov't Liaison, Mt. Olive Township, NJ
>No Code International, member - 1007

Oh no, an Amnesty International for all the di-dah prisoners of the world. What will they think of next? No License International? Oh yeah, we already did that with citizen's band. And all they had to do was fill out a form. Way too much trouble.

OK, I'm out of zings.

Seriously though, you seem to be very dedicated to your cause. I can't say I wish you luck with it becasue I simply don't agree with you. But, it would seem to me that your efforts are better suited to .policy and not the other

amateur and scanner newsgroups.

Why not consider encouraging your members to use .policy and not use so much space on those groups for which such posts are ill-suited. I would appreciate such a jesture and I'll bet others would also.

Then I could use the time I would save (by not getting involved in this issue) to make a few contacts on those much-sought-after Extra class sub-bands. And you could work on your code speed! Hi Hi, oops, just can't seem to shake that CW lingo. Some how that darned stuff has really gotten ingrained, hasn't it?

73,

Bill

Probably the part where eliminating the morse test would somehow
increase the numbers on *two meters* and increase baud rates on
packet. Last I *KNEW* there was a "NO-CODE* TECH LICENSE" available
that allowed operation on two meters and packet *NOW* (11/3/97)
without the *CODE* test.

DUHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHHH

Awaiting for your CYA response about how the millions who charge into
ham radio after the code test is eliminated are going to *discover*

two meters and packet. As *if* it weren't already available sans code testing.

Well, cool. But I demand to be able to transmit Blue Oyster Cult, Iron Butterfly, and the Doors. Of course in the bottom 25 kHz of each HF band, only Jerry Vale records can be played. :-)

yeah !! otherwise, we don't have anything to discuss !!

>>The Morse code ain't dead yet.
>
>>No one said it was. Use it all you like.

yeah, open up HF bands to no coders... and make the license such that
you have to have CW in order to use CW.

> This is the USA, land of opportunity.

you are right.....................................

>>It should, however,
>>be dead as a requirment. THAT is the issue, not the use
>>of morse.

yeah, but I think it makes sense if you say, "no coder licensees are
not allowed to transmit CW without passing CW qualifications."
in North America, the no coders CAN transmit CWs, say above 30 MHz by
technician... which doesn't make sense.

>Who says so? You?

me too. millions of others too.

> A bunch of folks who can't or won't (more likely) put forth
> the effort required to reach the license level they desire?

I know I can get to the level that I desire. I can send 35 wpm + I
can receive up to 12 wpm. I do make contacts by using CWs on
6m+2m, but I don't have CW qualifications yet. I don't bother to
take the exam while I am busy for school so by the end of christmas, I
will get it. I will get CW qualifications, but I will

complain against it. I really don't understand why no coders
don't have pridilege to HF bands. NO MAKE SENSES.
I have advanced license here in Canada, but I am also against it.... I
don't understand why you have to have "advanced" to operate the
repeaters or to operate club stations. Building the equipment ?
sure. it make senses.

> There is no reason
> to change this requirement unless and until there are no CW sub-bands and it

> CW lingo. Some how that darned stuff has really gotten ingrained, hasn't it?

by the way... here in Canada... you only have to have 12 wpm to use US
extra subbands... 5 wpm actually has prodivilege for some US extra
subband portions. in Japan ? only 9 wpm for all US extra
privilege !! Good luck on your contacts !!

You are right. The stuff on this web page is pure
hate.
I am surprised that KV4FZ would give his approval
to stuff like this. It certainly tends to confirm what the
other side has been saying about them.

Well, thats two and one probably has less than 100 licensed amateurs.
Does one
country and one small island count as 'several'?

If your above information is correct then I suppose the amateurs in
Japan are whining about not being able to run 1KW unless they can copy
12 wpm.

I see. So, your real complaint isn't the fact that there are 5 theory
tests, just that the time involved to pass the morse test hinders your
ability to obtain "instant gratification" WRT an amateur license. Got it.

The spoken word often has accents that makes it difficult to understand
the exact word, regardless of whether or not the speaker is "pronouncing"
(i.e. writing) it correctly. Code has no accents. Check.

To some degree, I am rather surprised you didn't allow the morse code
to be part of the classroom study.
With morse code the kids would learn the art of communications. How
to organize their thinking before having to communicate something.
When I was a new amateur, I found that before I made the effort to
send my thought, via the telegraph key, I had to arrange my thinking
so it would make sence to him.
I terms of dx, the fellow at other end would not, necessarily, know
canadian figures of speach etc, so I had to stop and think and try to
make sure he understood what I was sending.
One value of morse code is that there is no accent, as long as you can
spell reasonably well the idea gets across.

> one or the other.

'Reading the mail' I think the TCP/IP v AX25 discussion had a lot to
with the gating of AX25 BBS bulletins to NNTP. Not all AX25 BBS > NNTP
gateways gate *all* of the available material, and this had some relevance
to those AX25 BBSs were not passing all bulletins offered to them (e.g. 7+)

There's a bit of a dilemma in that quite a few members of the DCC are
active on TCP/IP, and we all know that TCP/IP frames are carried on the
back of AX25 packets over the air. Add that to the possibility that
should the new NOV ever appear, quite a few TCP/IP gb7 sysops (especially
the linux based ones) will almost certainly have to run FBB to comply with
the new rules, and I think you'll find that both networks are reasonably
safe from the DCC for a few years to come !

> Regulation is killing amateur radio in the UK.

It's making life as a packet radio user or sysop more difficult, certainly,
but I don't think that the old fogeys on those 80m 'gardening nets' have
much to fear - yet.

The bummer is that a small few of those who use and supply packet radio
services are quite happy to go off and moan directly to the RA if they
get upset by something which could be quite trivial, and then the RA have
to turn round to the DCC and say "what are we going to do about this ?"

Hey Presto .... another 'new NOV'

73, Gareth.

No, Howard ... only pro-coders raise that red herring ... the theory
and rules/regs tests will remain. The point is that in today's world
few but the incumbent, coded hams give a rat's ass about Morse code.
Most people in the US view it as something that was used in the old
west in the days stagecoach, not something that is "interesting" and
"useful" today.

Please stop trying to perpetuate the FUD-based "specter of CB" scenarios.
They don't have wings, so they don't fly.

All we want is to have reasonable rules and testing requirements that
are justifiable and relevant to today's world, not the late 1800s or
early 1900s.

> >I have no doubt in my mind that this is the ultimate aim of you and

> >right ... free for the taking.

No, the point is that most prospective hams have little or no use for
Morse and refuse to waste their valuable time which could be far better
spent becoming more technically competent, as opposed to the idiot gamers
who don't give a damn about radio, except as a "playing field."

> Actually, Walt, I think there is a valid point waiting to g out here. I
> don't think that today's young people *do* find Morse, keys, and the rest

> don't think we quite want that!).

Right ... and if I could convince the public that pig dung was wonderful,
I could sell a lot of that, too. Convincing the public that Morse is
"wonderful"
is about as likely.

> Convince ourselves that the hobby is
> dying, and consists of old men wittering into the sunset about their
> carrots, and that is just what the public will believe.

The public doesn't need any help to come to that conclusion ... it's glaringly
obvious to anyone with eyes and the remnants of their wits. I'll have to be
generous and assume you must be blind.

>3
>self-diagnostic. :-)

To whom it may concern:

The term "no-code" refers to the movement to reduce or eliminate Morse code TESTING as a requirement for access to the HF (< 30 MHz) amateur bands.

A "no-coder" is a person who supports the concept of reducing or eliminating Morse code TESTING as a requirement for access to the HF amateur bands.

In any case, the concept of the TESTING as the requirement is understood. All posts from me on this issue will be structured with the above understandings in mind. I assume the postings of most others in this newsgroup follow the same logic.

I also understand and acknowledge that no-coders do not necessarily support the elimination of the USE of the Morse code as a message encoding/decoding technique in the ARS. A person who did that would be more accurately described as an "anti-coder."

Kevin:

A "Real Ham" is a licensee in the Amateur Radio Service (ARS) who acknowledges the requirement for testing for proficiency in the use of the International Radiotelegraph Code (a.k.a. the Morse code) as necessary and essential. Knowledge of the Morse code gives an amateur radio operator a uniquely practical, effective, efficient and universal means of communicating with his fellow radio amateurs using simple equipment and low power. "Real Hams" acknowledge the benefits of this skill and willingly pursue it, and support the requirement. A "Complete Communicator," is a "Real Ham" who also applies the same attitude toward all the other modes available as a radio amateur, and who is willing to learn to use these modes and invest in the hardware/software to make them work for him. You cannot be a "Complete Communicator" without being a "Real Ham." I hope this clears it up for you.

73 de Larry, K3LT
A "Real Ham;" perhaps not yet a "Complete Communicator," but I'm working on it!

Hi Ralph,
Please don't invent history to suit your argument. At no time in the
history of amateur radio was there a (government) requirement to build
one's equipment. I've a large collection of history books to back up my
statement.

2023. Possible geomagnetic storm November 6 ++

Newsgroup: rec.radio.amateur.misc
Date: 1997-11-04 00:00:00 UTC
From: janalv@robin.no
Message-ID: <MPG.ec8eab61b99f557989681@news.robin.no>
Source record: 187472
Cross-posted to: rec.radio.amateur.misc,rec.radio.shortwave

Solar region 8100 was the origin of 3 M class flares on November 3. The two major ones occurred at 09 and 10h UTC and were associated with earth directed CMEs (coronal mass ejections). This has been confirmed by SOHO/LASCO observations as a halo event. Earth can expect impacts from the CMEs probably on November 6 after 12h UTC. The geomagnetic field is likely to become active with major storm intervals probable.

Another CME was observed early on November 2. This particular CME is not thought to have been significant, however, it had its origin near the centre of the visible solar disk. Any impact from it can be expected on November 5 after 06h UTC. If it impacts the geomagnetic field is likely to become unsettled to minor storm.

Region 8100 is currently very complex and has so far today produced 2 M flares and 1 X flare. These events may have been associated with CMEs. Further X flares are very likely and there is an increasing possibility of a proton flare. Region 8100 will rotate off the visible disk in about 5 days.

For updates on region 8100 and geomagnetic activity, take a look at http://www.dxlc.com/solar/

A Major X-Class Protno Flare has been observed. Protons are currently producing enhanced Polar Cap Absorption which is degrading polar and high-latitude signal paths by increasing absorption levels.

Protons are currently running above 50 particle flux units and are beginning to level off now.

This flare has resulted in a coronal mass ejection which should impact the Earth on 06 November.

Associated Auroral Activity and Geomagnetic Storm Warnings will be issued within the next 24 hours.

Additional major M and X-class flares are expected over the next 72 hours. Another major proton flare is also highly probable.

Complete details can be found at: http://solar.uleth.ca/solar, including daily summaries of activity, the latest warnings and alerts, and forecasts for the next 72 hours.

Follow solar, geomagnetic, ionospheric, and auroral activity conditions in REALTIME using one of three software packages at: http://solar.uleth.ca/solar/www/swarm.html.

No body of knowledge worth having is easily aquired.

Nintendo knowledge = easy

Radio amateurs exam + 12 wpm CW = not nearly so easy.

Plus the knowledge that Nintendo, computer games, etc, are designed to appeal to the wants and desires that live in the Id (the unconscious mind), and amateur radio isn't so designed.

So Radio Amateurs are on a loser. You have to decide on an individual basis what it is that attracts you to Amateur Radio, because you are not being impelled (by advertising and peer pressure) to "consume" it. Differences of opinion in this case are bound to arise. In your differences lie individuality, not blind conformity.

Just a thought.

>anyone who has NO interest in ever using Morse) ARE a major barrier to
>the recruitment of new hams, at least here in the US ... and PARTICULARLY
>amongst the technical professionals who we need to attract the most.

These days in the UK most peoples first experience of amateur radio is a
VHF station of some description. Not really surprising as the majority
of active licencees in the UK are no code operators. I qualify active
as those who are in the first flush of the hobby and fill the majority
of the seats at any radio club meeting. These are the guys who operate
special event stations, use their handheld radios around town and
generally get amongst the general public.
The most common form of amateur radio in public view is the 2m/70cm FM
mobile station.
The areas of amateur radio that generate most public interest are
digital modes and amateur television.
The point I am trying to make is that none of the above requires a code
licence and that it is my contention that interest in the HF bands comes
along after the radio bug has bitten.
I should point out that although a keen morse operator I have no
argument with those who wish to replace code with something more
appropriate. I do not, however, believe that code is the sole or even a
significant reason for any decline in numbers for the reasons stated
above.

Newsgroup: rec.radio.amateur.misc
Date: 1997-11-04 00:00:00 UTC
From: aci6@aol.com
Message-ID: <19971104091401.EAA18022@ladder02.news.aol.com>
Source record: 187478

Hello to All:

I am posting this to rec.radio.amateur.misc only at this time. It may be posted to the scanner groups later for informational purposes.

According to Deja News, since October 18, 1997 (i.e. in the last 16 days) Student @ McGill University, AKA Webmaster@RadioTelephone.net, has made 74 posts to the radio related newsgroups.

Of those 74 postings, 18 have been original posts.

Of those 18 originals, 17 have been cross-posted! (94.44 percent) With:

2 cross-posted to 3 newsgroups,
5 cross-posted to 4 newsgroups,
9 cross-posted to 5 newsgroups and
1 cross-posted to 6 newsgroups

Not to mention a reply that was cross-posted to 4 newsgroups when the original post was only in rec.radio.scanner!

In addition, a great number of these were cross-posted to inappropriate groups.

For instance,

* Ham radio policy matters were posted in: rec.radio.amateur.misc, alt.radio.scanner and rec.radio.scanner.
* A question about an Icom 706 was posted in both .scanners
* An announcement about a fee for Canadian hams was also posted in both .scanners.

And so on.

The Guide to the Personal Radio Newsgroups has this to say about cross-posting:

"Please do not crosspost messages to two or more groups unless there is a GENUINE interest in both groups in the topic being discussed, . . ." (emphasis is mine)

Two? Would you believe SIX.

What can be done to discourage this type of behavior?

And, quoting from the Guide again:

"The group rec.radio.amateur.policy was created as a place for all the discussions that seem to drag on interminably about the many rules, regulations, legalities, and policies that surround Amateur Radio, both existing and proposed."

Is rec.radio.amateur.policy not the PERFECT newsgroup for the No Code 'discussions' ?!!!!!!!!!!

And, it further states about rec.radio.amateur.misc: "Any message that's not more appropriate in one of the other groups belongs here . . ."

Please note that it says MORE appropriate in ONE of the other groups!

I have spent a lot of time researching this. Probably way too much time, considering the nature of this prolific Canadian poster (pCp). But I am trying to convince this person that what they are doing is inappropriate and unwelcome (in my opinion.)

I do not want or intend for this to be the start of another 6 month long thread.

So, if you have a suggestion as to the best and most appropriate way to discourage this "pCp", please reply to me DIRECTLY and let's not take up any more space in this group than necessary with this. Please.

Regards,

Bill

Ah, but you *can* order a pizza by autopatch (though having the
Dominos guy chasing you down the road is a pretty funny picture).
It is now acceptable to conduct occasional personal business by
amateur radio. This is a recent change in the rules.

Besides, I think the quoted example patch is a true emergency
communication. It probably prevents multiple homicides every
year because it allows the wife enough warning to get her lover
out of the house before the husband gets home. I can't think of
any other good reason for it.

>It could have been worse. He could have got his wife licensed and
>bought her an HT and you could have been forced to listen to them for
>30-45 minutes while they say on the radio what they should be saying in
>the living room. No wait, that IS what we hear on the repeaters
>nowadays...

Even funnier is to hear the intimate activities that go on in cars when one party is unknowingly sitting on the microphone. That seems to be a fairly frequent occurance today too. One recent example went on for over 45 minutes. That's entertainment. It is also proof that not all VHF+ hams are over the hill. You *never* hear that on HF.

2032. Digest of Articles - QST Aug 97 (Long - 33k)

Newsgroup: rec.radio.amateur.misc
Date: 1997-11-04 00:00:00 UTC
From: wvanho@infinet.com
Message-ID: <63n3td$a5b@news1.infinet.com>
Source record: 187481
Cross-posted to: rec.radio.amateur.misc,rec.radio.info

Following are digests of articles printed in the August, 1997 issue of QST. Such digests are being prepared for each issue of QST, and posted periodically. They are archived, beginning with the January, 1993 issue, and available by ftp from:

(in USA) oak.oakland.edu/pub/hamradio/arrl/infoserv/digests
(in Europe) ftp.funet.fi/pub/ham/arrl/infoserv/digests

They also can be gotten by E-Mail from the ARRL Info Server at: info@arrl.org. For detailed instructions, send an E-Mail message containing the following:

HELP
INDEX
QUIT

Another access route is via the ARRL HIRAM bulletin board. It can be accessed by a direct telephone call at any speed from 1200- to 28,800-baud. The number is: (860) 594-0306.

The major value of digests is to give readers sufficient information to decide whether to obtain a copy of the full text. If any U.S. reader wants a copy of an article in QST, please inquire of other hams in your own neighborhood. Many have collections of back issues. Anyone who is unsuccessful in finding a fellow ham with a collection should try every library in the area, especially those at universities and technical colleges. If all else fails, a copy can be obtained from the ARRL Technical Department, 225 Main St., Newington, CT 06111-1494 USA for a fee of $3.00 per copy for ARRL members; $5.00 for non-members. Remember, it is both cheaper and quicker to obtain one locally.

Readers in most other countries can obtain copies from their own national ham organizations, sometimes translated into their own languages.

TECHNICAL ARTICLES (TA)

Title>TA1:Home Brew Your Own Inductors!
Author>Johns, Robert H. - W3JIP
Source>QST Aug 97, pp. 33-35
Abstract>Shows how to make inductors at home. The key is a removable coil form, made from PVC pipe. Coil is wound and ribs cast on it, made of epoxy resin. After hardening, coil form is removed.

Digest>W3JIP, in this article, shows how he makes multi-turn inductors using all sizes of conductors from No. 20 wire to quarter-inch (6-mm.) copper tubing. The end results are very effective and present a professional appearance.

The coils are wound tightly on a coil form, and supporting ribs are cast in place using epoxy cement, after which the form is removed. The key to success is the form which is made of PVC pipe. Pipe comes in a wide range of diameters, so it is easy to make coils with diameters from a

half-inch to several inches (1-inch = 25.4-mm).

To make it possible to remove the form easily after the coil is tightly wound and the ribs dried and hardened, two slots are cut lengthwise in the sides of the form from one end to within an inch of the other end. The slots are on opposite sides of the tubing and are cut simultaneously by sawing across the diameter. Two saw cuts are made a fraction of an inch apart so that, when the strips of PVC between them are removed, open slots about three-eighths of an inch wide (9-mm.) are left.

To support the form so that it does not collapse under the tension of the wire wound on it, a strip of 3/4-inch thick (18-mm.) wood is cut to a width equal to the inside diameter of the PVC tubing and a length equal to that of the form. The edges of the strip are rounded with a block plane so that the strip fits snugly inside the form. The wood is used to support the form during winding and removed when the coil is finished. With the slotted form, it is easy to squeeze the two sides of the form together enough to allow the coil to be removed.

Before the coil is wound, pieces of electrical tape are placed inside the slots to form troughs into which the epoxy will be poured to make the ribs. Standard epoxy with a setting time of some 4- to 6-minutes should be used, not the quick-set nor the long working-time types. Pour one side first and let it cure, then turn the core over and pour the rib on the opposite side.

To anchor the wire at each end, holes should be drilled in the form at the locations of the two ends of the coil, slightly larger in diameter than that of the wire to be wound. At the beginning of the winding process, the end of the wire should be pushed into the hole and the wire bent tightly against the form. When the coil is finished, the free end should also be pushed into the hole. Then if one uses long-nose pliers, grasps the end of the wire inside the form and rotates the pliers, the wire will be put under considerable tension thereby tending to straighten any remaining bends.

To space the windings uniformly, use a spacing line approximately the same diameter as the wire being wound. Wind the wire and the spacing line side-by-side for the full length of the coil. Each turn should be forced tightly against the previous one. When the winding is complete and before pouring the ribs, remove the spacing line. Magnet wire should be used because the epoxy forms a solid bond with the enamel coating; bare wire can be used, but the bond is not as good.

An approximation of the inductance of a single-layer coil can be calculated from the formula:

L = (D^2 * N^2) / ((18 * D) + (40 * L))

in which:
L is the inductance in uHy.
D is the coil diameter from wire center-to-center in inches
L is the coil length in inches

N is the number of turns
1-inch = 25.4-mm.

Insulating supports can be added to the coil by gluing flat-head Nylon bolts to the ribs as they are being poured.

Title>TA2:An Easy Way to Copy the Weather Satellites
Author>Ruperto, Eugene - W3KH
Source>QST Aug 97, pp. 36-39
Abstract>Anyone with a 137-mHz. receiver and a Windows computer containing certain accessories can copy images from weather satellites. Necessary software can be downloaded, free, from the World Wide Web.

Digest>In past years, many hams have gone to considerable trouble and expense to equip their stations to receive weather satellite pictures. Now it has become very much easier and less expensive for any amateur who has a computer and a radio capable of receiving 137-mHz. signals to capture such signals in real time. In fact, if they have a Windows PC with 4-megabytes of RAM, an 8-bit monaural sound card or better, and a VGA graphics card, they can capture such signals for no additional cost, at all. All that is required is a software package that can be obtained free.

There are three satellites in low-earth orbit that are usable in the continental USA. These are the American NOAA-12, NOAA-14, and the Russian Meteor 3-5. They operate on 137.5-, 137.62-, and 137.85-mHz., respectively. The software required is the program inst230e.exe, authored by Christian Bach, in Germany. It is available for downloading on the World Wide Web on http://ourworld.compuserve.com/homepages/hffax/toc6.htm. It can also be downloaded by FTP from: http://ftp.barc.org:8080/pub/hamradio/arrl/qst-binaries/

To know when each satellite will make a pass overhead, the operator should have a satellite-tracking program. Several good ones are available from various sources. One is predict.exe, written by KD2BD. It can be obtained, free, from http://www.njin.net/~magliaco/

To insure good reception throughout an overhead pass of the satellite, a superior antenna is a quadrifilar helix, as described by W3KH in the article: "The W3KH Quadrifilar Helix Antenna", QST Aug 96.

Title>TA3:A Remote Antenna Selector Switch
Author>Rosenthal, Herbert M. - W5AN
Source>QST Aug 97, pp. 40-43
Abstract>Describes a straightforward relay switching system for connecting a single feedline to any one of six antennas remotely, controlled from the hamshack.

Digest>This article describes a switching system for remotely connecting a single coax feedline to any one of six different antennas. Electrically, the system is a straightforward use of six single-pole,

double-throw relays controlled by a six-position rotary switch. The rotary switch is mounted in a desktop box at the operator's desk, connected the weatherproof switchbox at the base of the antennas by a 9-conductor shielded control cable.

The antenna relays are all wired so that each antenna is grounded when the relay is in the "Normal" (off) position, and connected to the feedline in the "On" position.

The major part of the article is comprised of the author's description of the mechanical aspects of the weatherproof cabinet, the heavy-duty relays used, and the safety features he used throughout the system.

PRODUCT REVIEW
Conductor: Rick Lindquist - N1RL
Sr. Asst. Technical Editor

Title>PR1:Cushcraft R-7000 Multiband Vertical Antenna
Author>Lindquist, Rick - N1RL
Source>QST Aug 97, pp. 59-60
Abstract>Performance review of the R-7000 antenna that covers seven bands: 40-, 30-, 20-, 17-, 15-, 12-, and 10-meters.

Digest>The Cushcraft R-7000 is a trap vertical antenna that covers seven bands: 40-, 30-, 20-, 17-, 15-, 12-, and 10-meters. It is a new model that replaces the older R-7 that covered the same bands. It is 24-feet high (7.3-m.) and the only base radials used are four 4-foot long (12.2-cm.) spring-steel whips located at the base of the antenna just above a weatherproof plastic box that contains the matching circuit that matches the 50-ohm feedline to the high impedance load. The base of the antenna presents a high-impedance on all bands because the traps at the top of the radiator cause it to resonate in a half-wavelength mode. However, on the lower frequencies, the antenna is far from a half-wavelength and presents a radiation resistance far lower than that of a full size half-wave dipole.

The antenna is rated at 1500-watts output for CW and SSB; for high duty-cycle modes like RTTY, power is limited to 1000-watts. Operating bandwidths over which the SWR is 2:1, or less, are: 1700-kHz. on 10-meters; the entire bands on 12-, 15-, and 30-meters; 250-kHz. on 20-meters; and 150-kHz. on 40-meters.

The reviewer verified that the antenna gave excellent performance on all seven bands. He spent a total of some 90-minutes assembling the antenna, and had no difficulties. Since it weighs only 18-pounds (8.2-kg.), he easily mounted it atop an 8-foot (2.4-m.) mast, working alone. Its performance on both stateside and DX QSOs was excellent. He found that, on a few occasions, his signal report was actually stronger when using the R-7000 than with his 260-foot (79-m.) multiband center-fed dipole.

The manufacturer's list price is $510.

Title>PR2:A Portable Short Shortwave Receiver Roundup
Author>Ford, Steve - WB8IMY
Source>QST Aug 97, pp. 60-64
Abstract>Performance review of four small, portable radio receivers designed for Short Wave Listening (SWL). They are: Grundig "Yacht Boy" 400; Panasonic RF-B45; Sangean ATS-909; and Sony ICF-2010.

Digest>This is a performance review of four small, portable radio receivers suitable for listening to broadcast radio, as well as ham bands and other commercial stations, from very low frequencies to very high frequencies. The four are: Grundig "Yacht Boy" 400; Panasonic RF-B45; Sangean ATS-909; and Sony ICF-2010. All these radios except the Sony are about 5-inches high (13-cm.), 8-inches wide (20-cm.) and 1-1/2-inches thick (4-cm.), weighing about 2-pounds (0.9-kg.). The Sony ICF-2010 is appreciably larger: 6-1/2-inches high (16.6-cm.), 11-inches wide (28-cm.) and 1-3/4-inches thick (4.5-cm.), and weighs 3-1/2-pounds (1.6-kg.).

All four cover a wide range of frequencies in the long wave, medium wave, short wave and FM broadcast bands. All operate from internal batteries or external AC adapters. All will demodulate AM, CW, and FM signals. All have built-in speakers and signal-strength indicators. All contain memories that can be programmed, retrieved, and scanned. All can also be used as alarm clocks, since the time is constantly displayed on the LCD panels and a timer can be set to turn on the radio at the desired time.

Radio performance of all the tested models proved that reception is quite adequate for all forms of radio listening. The selectivity is appropriate for listening to broadcasts; not surprisingly, it is much too broad for optimal ham radio use.

Grundig "Yacht Boy" 400
This radio, in addition to its loudspeaker, comes equipped with miniature headphones that provide stereo listening on the FM broadcast band. It does a decent job of receiving SSB and CW on the ham bands. There is a fine-tuning wheel that gives a bandspread of plus/minus 1-kHz. It contains an LCD panel that displays two clocks; they can be set independently so that, for example, one can display both local time and UTC simultaneously. A bar-graph S-meter is displayed in the lower corner of the LCD. A typical discounted selling price is $178.

Panasonic RF-B45
The RF-B45 is the least expensive of the four radios evaluated. After the tests were made, it was learned that the manufacturer has discontinued this radio.

It can be tuned in two ways: its frequency can be entered directly via a keypad; or else one can set it to the low end of a range to be scanned and actuate the "Autotune" control. This will cause it to scan up the

band, stopping on audible signals. A "Fine Tune" control is provided for channel tweaking.

A phone jack and miniature headphones are supplied, but the rig does not produce stereo reception from FM stations. A typical selling price was about $170.

Sangean ATS-909

The ATS-909 is a more expensive radio, with many more features than the first two. It provides 306 memory channels that hold not only the frequency, but also the mode; in addition, one can add an alphanumeric label to each channel. In contrast, the other three radios only provide from 27 to 40 channels of limited memory capacity.

It provides an automatic tuning system (ATS) that will search out, and store, the locations of the strongest signals in each band. If one is in a strange town, a press of the FM button will cause the radio to scan and store the 18 strongest stations on the air at the time. It will do the same on the AM broadcast band, storing the 9 strongest; but the ATS does not work on shortwave.

It has a convenient manual tuning knob with two step settings (one kHz. for "Fast" and 40-Hz for "Slow"). It is the only one of the four that decodes the Radio Data System (RDS) on FM stations. RDS comprises sub-carriers that many FM stations use to "piggy-back" digital channels on their broadcast signal. When the radio is tuned to one such station, its callsign will appear on the display within a few seconds. Also, some stations use RDS to transmit weather, or other information.

The unit contains three separate standby timers and a "Sleep" timer. An average street price for the ATS-909 is $263.

Sony ICF-2010
The ICF-2010 is the most complex and expensive receiver in the group. Its larger size puts it almost in the "table top" class. Its tuning range covers all the bands tuned by the others, plus the aeronautical band from 116- to 136-mHz.

It is the only radio in the group to offer AM synchronous detection. This is very important for shortwave listeners because it eliminates the extreme distortion that comes and goes when selective fading causes the signal carrier to drop out. Synchronous AM means that the radio provides a beat frequency oscillator that is synchronize with the received carrier so that, even if the received carrier drops out completely, there is plenty of carrier power available at the detector to do a perfect job of demodulation.

The typical street price is about $355.

Title>PR3:Radio Shack "Probe-Style" Oscilloscope
Author>Wolfgang, Larry - WR1B

Source>QST Aug 97, pp. 65-66
Abstract>Describes a Radio Shack hardware/software package that turns a computer into an oscilloscope for analyzing waveforms and measuring signals at frequencies up to 5.0-mHz.

Digest>A probe style oscilloscope is a hand held probe that plugs into a computer. A floppy disk containing software comes with the unit and, when it is loaded into the computer, the combination becomes a respectable single-channel oscilloscope capable of measuring and analyzing waveforms at frequencies up to 5.0-mHz. There are ten push-button selectable sampling rates from 50-nanoseconds to 1-millisecond.

The probe has a needle-like metal tip about 3/4-inch long (19-mm.) for contacting the test points in a circuit. The case of the hand-held probe holds all of the electronics required to generate the sampling pulses and manipulate the samples to measure their amplitudes and waveforms, and transmit them in digital form to the computer for processing. It plugs into a serial port (RS-232) in the computer. It can be used with computers running either DOS or any version of Windows, but Windows 95 provides the most versatility.

Built into the case of the probe is a small LCD display that shows a miniature version of the raw waveform. The reviewer found the LCD display to be of limited use because of its very small size.

The reviewer used the device with his Windows computer and got excellent results in testing a variety of electronic circuits. When he checked his measurements against a laboratory-grade Hewlett-Packard unit, he was surprised to find that the measurements made by his setup matched those of the professional unit to the last digit. In both frequency and voltage measurements. The wave forms displayed on the computer monitor were of relatively large scale, easy to interpret in showing every detail of the waveform.

The Radio Shack list price for the complete unit is $100.

TECHNICAL CORRESPONDENCE (TC)
Conductor: Paul Pagel - N1FB
Associate Technical Editor

Title>TC1:Balloon Skyhooks
Author>Hughes, Jack M. - WB6SOI
Source>QST Aug 97, p. 69
Abstract>Describes "Aerostats", very large balloons used as semi-permanent support for radio antennas. They are far too costly for amateur use.

Abstract>The author is an employee of the TCOM Company that builds "Aerostats". These are very large helium-filled balloons that are used to support semi-permanent antennas for low-frequency radio

communication.

In this letter, he describes the balloons and the associated equipment the company offers. They are sufficiently rugged to survive in winds up to 70-knots (124-km./hour) and can stay up continuously, although they need to be refilled with gas about every three weeks. They also are very expensive, well over $100,000 each! Consequently, not many amateurs will want to buy them.

Title>TC2:Amateur Radio Software Traps
Author>Galpin, Ian - G1SMD
Source>QST Aug 97, pp. 69-70
Abstract>Describes the "Year 2000" problem in computer software; and also misunderstandings that may occur due to the American practice of writing dates as: month, day, year vs. other nations' day, month, year.

Digest>In this letter, G1SMD addresses the "Year 2000" problem that was the subject of a letter by W2XY in Technical Correspondence, QST Jun 97. This refers to the fact that much computer software has been written to express years in only two digits; i.e. "1997" is often stored as "97" and the first two digits are understood as "19". In such programs, problems will arise when the year 2000 arrives. If it is expressed as "00", the computer is apt to interpret that as 1900.

The author broadens the subject by pointing out that other problems arise because of the different conventions between the USA and Europe: in the USA 1/12/96 means January 12, 1996; but in Europe, it means 1 December 1996, since the day number always precedes the month.

The best solution for both problems is for the ham world to follow the practice that was established as International Standard ISO-8601 twenty-five years ago. It requires all dates to be written in the order: year-month-day (using hyphens, not slash marks). It should contain a four-digit year and two digit days and months, including leading zeroes ahead of single-digit numbers.

The international standard was officially adopted in the USA and made ANSI Standard X3.30-1985 and X3.51-1994. German, British, and other countries' standard associations also officially accepted the format and common sense verifies that its use is the best way to obviate misunderstandings.

HINTS AND KINKS (HK)
Conductor: Bob Schetgen - KU7G
Asst. Technical Editor

Title>HK1:Yaesu FT-840/KAM-Plus Interconnection
Author>Schultz, Scott A. - AA0ZS
Source>QST Aug 97, p. 67
Abstract>Describes the author's system for switching his Yaesu FT-840

and KAM TNC between voice, CW, and digital operations.

Digest>AA0ZS uses a Yaesu FT-840 on digital modes. The rig does not provide FSK, so it operates AFSK with audio tones inserted through the microphone jack. To enable convenient switching between voice and digital operations, he uses an MFJ-manufactured switchbox containing connectors for the microphone, the KAM, and the cable leading to the transceiver.

This arrangement left no provision for connecting to the CW keying line, so he used a cable with a quarter-inch phone plug molded on its end and connected it inside the KAM box to the keying-line lead in the multi-conductor main cable that runs to the transceiver. That cable contains eight conductors, one of which is the keying line and attaches to the transceiver through an 8-pin DIN connector. For entry into the KAM box, he drilled a small hole, inserted a protective grommet, and ran the lead from the key through the hole.

Title>HK2:Reverse-a-Probe
Author>Edwards, A. W. - K5CN
Source>QST Aug 97, pp. 67-68
Abstract>How to modify a VOM probe so that its polarity can be switched by push-button, allowing easy polarity checks of diodes, etc.

Digest>One of the most useful tests used in trouble-shooting solid-state equipment is a polarized ohmmeter check to verify that diodes and other semiconductors show a high resistance in one direction and low in the other. Typically, a probe is used that has an alligator clip on the ground lead and a pin for contacting leads on the circuit board or on components. Such a setup makes it very unhandy to reverse leads.

To make his probe much easier to use, K3CN added a small DPDT push-button switch inserted inside the shell of the probe and wired to reverse the leads. Now he can make the forward-reverse check instantly by simply pushing the button.

Title>HK3:Mike-Switch Cures
Author>Goshay, D. K. - W6MMU
Source>QST Aug 97, p. 68
Abstract>How the author used a pulse of heavy current to clean the switch contacts in a microphone.

Digest>N5SAN had problems with intermittent operation of the push-to-talk switch on his mike housing. He theorized that, since the switch contacts carry almost no current in normal operation of his high-impedance mike, a resistive film of some sort may have built up on the contacts. Since it was not possible to clean them directly, he decided to try to burn it off by passing relatively heavy current through the switch.

After making sure that the switch was disconnected from the microphone element, he wired a 60-watt light bulb in series with it and connected them across the 120-volt power main. After actuating the switch a few times, he found that the light flashed on and off cleanly and indicated that the switch was working perfectly. Since then, he has had no more problems with it.

NEW HAM COMPANION (NHC)

Title>The Doctor is IN
Author>Various
Source>QST Aug 97, pp. 50-51
Abstract>Questions and answers on subjects of primary interest to newcomers to amateur radio.

Digest>Questions discussed in this issue include: periscope antennas for use with microwaves; fusing of positive or negative leads in mobile installations; recording digital audio from a Soundblaster computer card; nonlinearity in S-meters; "grandfathering" to General Class licenses for those who held Technician licenses prior to 1987; differences between shortwave radio receivers and ham receivers; and other subjects.

Title>NHC2:Height Really Does Matter!
Author>Lehman, Jeffrey J. - KD6DHB
Source>QST Aug 97, pp. 52-54
Abstract>Operating in the January VHF Sweepstakes from the top of a 10,000-foot mountain.

Digest>The author and two other hams operated the 1996 January VHF Sweepstakes from the top of Rogers Peak in the Death Valley National Park. Their elevation was more than 10,000-feet (3050-m.) above sea level and on the first day they were very successful more than 200 stations on four bands.

On the second day, the weather changed drastically. The temperature dropped well below freezing and wind speeds rose to dangerous levels. Nevertheless, they succeeded in packing up all equipment and antennas, and safely got down the mountain.

Title>NHC3:The Adventure of Ham Radio
Author>Gay, Michael - KC7NOG
Source>QST Aug 97, p. 55
Abstract>How mother, father, and two children all became hams within one year.

Digest>The author is 14-years old, has a 17-year old sister and two brothers, aged 7 and 3. Both parents and all of the siblings, except the youngest, became hams within a one-year period. Their father had inherited their grandfather's ham gear.

This article relates the way that each member became interested and got their licenses. It also tells of the excitement and pleasure all have gotten from the hobby.

Title>NHC4:Radios in the Kitchen
Author>Elliott, Jock - KB2GOM
Source>QST Aug 97, pp. 56-57
Abstract>Organizing and controlling a "Commuter's Assistance Network" on 2-meters. The goal is to report highway hazards to authorities, and to share traffic information with hams.

Digest>For a number of years, a "Commuter's Assistance Network" has been operating on 2-meters in the Albany-Schenectady-Troy area of New York state. The net is active during the morning commuting hours from 6:00 to 8:15 AM, to serve two main objectives: to report highway hazards to proper authorities, and to share traffic information to participants.

The net uses the Niagara Mohawk Radio Club's repeater, WA2OQE. The net controller also operates a similar network on Citzens Band, Channel 9. In late 1996, the author became Net Controller. In this article, he describes how his two coordinated nets operate.

A person who decides to organize a Commuter's Network is making a major commitment. It should not be made lightly. But if one wants to help people who are in distress, it can be very gratifying.

To be successful, one must obtain the approval of the person or organization that owns and controls the repeater to be used, and the controller's station must put out a strong enough signal to cause full quieting in it. Next, they must become very familiar with the streets, roads, and highways within range and have detailed maps available for instant use. Then they must have the telephone numbers for all emergency departments in the area, both for emergency calls and for non-emergency reports.

The author also offers many hints regarding the information that is necessary to collect from accidents or other incidents to be reported, and what information not to include, so that the reports are both complete and concise.

GENERAL INTEREST ARTICLES (GI)

Title>GI1:Celestial Fox Hunts
Author>Cox, Donald - AA3EK
Source>QST Aug 97, pp. 44-46
Abstract>Describes worldwide satellite-based search-and-rescue systems operated by cooperating governments both before and after the disappearance of the Iron Curtain.

Digest>This article describes several systems of satellite-based search-and-rescue systems. All have come into being through

international cooperative efforts to create systems capable of locating people in distress who need help. Even during the height of the Cold War, the USSR and the USA developed systems that operated separately but cooperated by exchanging information freely.

All such systems require that people or vehicles must carry emergency beacons that, in an emergency, automatically or by manual activation emit radio signals. Satellites that are continuously in orbit detect these signals and, by analyzing the Doppler shift of frequency as they pass over the transmitting beacon, calculate its location and automatically transmit the information to ground stations around the world.

Systems that have been in operation for some years use 121.5- or 243.0-mHz. Now the 121.5-mHz. system is considered obsolete and is being phased out. A newer, more sophisticated system, operating on 406-mHz. is coming into use.

The first people who were rescued by any of these systems were three individuals who were stranded when their light plane crash-landed in Canada in 1982. Since then, more than 6000 lives have been saved worldwide. Rescues made in 1996 included passengers from a plane that crashed near Guam, the crew of a ship that sank north of Cuba, and snowmobilers lost in the Alaskan wilderness.

2033. Digest of Articles - QST Sep 97 (Long - 38k)

Newsgroup: rec.radio.amateur.misc
Date: 1997-11-04 00:00:00 UTC
From: wvanho@infinet.com
Message-ID: <63n4a5$a61@news1.infinet.com>
Source record: 187482
Cross-posted to: rec.radio.amateur.misc,rec.radio.info

Following are digests of articles printed in the September, 1997 issue of QST. Such digests are being prepared for each issue of QST, and posted periodically. They are archived, beginning with the January, 1993 issue, and available by ftp from:

(in USA) oak.oakland.edu/pub/hamradio/arrl/infoserv/digests
(in Europe) ftp.funet.fi/pub/ham/arrl/infoserv/digests

They also can be gotten by E-Mail from the ARRL Info Server at: info@arrl.org. For detailed instructions, send an E-Mail message containing the following:

HELP
INDEX
QUIT

Another access route is via the ARRL HIRAM bulletin board. It can be accessed by a direct telephone call at any speed from 1200- to 28,800-baud. The number is: (860) 594-0306.

The major value of digests is to give readers sufficient information to decide whether to obtain a copy of the full text. If any U.S. reader wants a copy of an article in QST, please inquire of other hams in your own neighborhood. Many have collections of back issues. Anyone who is unsuccessful in finding a fellow ham with a collection should try every library in the area, especially those at universities and technical colleges. If all else fails, a copy can be obtained from the ARRL Technical Department, 225 Main St., Newington, CT 06111-1494 USA for a fee of $3.00 per copy for ARRL members; $5.00 for non-members. Remember, it is both cheaper and quicker to obtain one locally.

Readers in most other countries can obtain copies from their own national ham organizations, sometimes translated into their own languages.

TECHNICAL ARTICLES (TA)

Title>TA1:Build a Return Loss Bridge
Author>Ford, Jim - N6JF
Source>QST Sep 97, pp. 34-36
Abstract>Introduces the concept of return loss and provides construction details for making a return-loss bridge, as well as an RF voltage detector for use with it.

Digest>Return Loss is a concept that is unknown to many hams, but it is useful in many circumstances and is easy to understand. However, the terminology is unfortunate in some respects because it reverses the normal implication of the word "loss". We normally think of loss as something bad, but in this usage it is good!

Think of the concept of Standing Wave Ratio. This is a measure of the relationship between forward power and reflected or returned power. The amount of power that flows through the transmission line to the antenna is not returned; it is lost to the return, therefore is "return loss".

A return-loss bridge is a very simple circuit comprised of a transformer made of a few turns of fine wire on a small ferrite core, and three 50-ohm resistors. Using it with a signal generator and an RF voltmeter, one can measure return loss directly. From it, one can calculate SWR. When return loss is zero, the SWR is infinite, and when the SWR is 1:1, the return loss is infinite.

Using return loss greatly simplifies calculations of a circuit in which there are two or more lossy components in tandem. For example, with a transmitter feeding power through a feedline to an antenna, if the return loss at the transmitter is known and the loss in the coax feedline is also known, the coax loss can be doubled and subtracted from the transmitter return loss to obtain the return loss at the antenna input, directly. (The coax loss is doubled because the power returned by the mismatch moves through the line twice, forward and returned).

The article provides a schematic diagram and parts list for building the bridge, and also for a simple RF voltage detector using a Schottkey diode and a few other parts. Included is a calibration curve for the voltage detector.

The 1997 ARRL Amateur Radio Handbook contains more information about return loss bridges and their applications.

Title>TA2:The CycleMaster
Author>Richey, Lee - WA3FIY
Source>QST Sep 97, pp. 37-42
Abstract>Build a frequency-control system for use with receiver, or other gear having a voltage-tuned VFO. Provides RIT, memories, and other features of sophisticated receivers.

Digest>In this article, WA3FIY provides full construction information for building a general-purpose frequency control system that can be used with almost any receiver, transceiver, signal generator, converter, or piece of test gear that is equipped with a voltage-tuned VFO. It provides two VFO registers, 32-memories, a four-digit frequency display, RIT, and a smooth, variable-rate shaft encoder. It provides crystal-like long-term stability and tunes in steps of 10-Hz. It provides 10-Hz. tuning resolution over a range from VLF to 50-mHz. It can be used at higher frequencies by the addition of prescalers or frequency-mixing systems.

The overall system is built in three subassemblies: the display and control unit, the integrator, and the VCO. The control and display unit is made up almost entirely of digital logic components, including the 7-segment LED display.

The integrator converts the up- and down-pulses from the shaft encoder to a DC control voltage fed to the VCO. It provides the RIT function by shifting the output voltage proportional to the RIT offset. The VCO can be any well-designed unit. Best performance is obtained when the control-voltage-to-frequency characteristic is approximately linear. A change of tuning sensitivity of no more than 2:1 over the entire range provides excellent performance.

The author has used his unit in a number of receivers and transceivers. One required a high-resolution VFO over the range: 5.0- to 5.5-mHz. He set up the CycleMaster to cover 40- to 44-mHz. with the standard plus/minus 10-Hz. resolution. Then, dividing the output by 8 gave the 5.0- to 5.5-mHz. span with plus/minus 1.25-Hz. resolution. This scheme also reduced the 40-mHz. oscillator phase noise by 18-dB!

Partial, as well as complete kits are available from Radio Corporation, RD 4, Box 240, Summit Dr., Franklin, PA 16323; E-mail: lee@radioadv.com. The complete kit is priced at $83.70, including shipping in the USA and Canada. Shipping costs to other destinations will be established at the time of the order. Payment can be made by MasterCard or Visa.

Title>TA3:The K9AY Terminated Loop - A Compact Directional Receiving Antenna
Author>Breed, Gary - K9AY
Source>QST Sep 97, pp. 43-46
Abstract>Describes a directional receiving antenna for low band use which is smaller than an EWE but provides equal performance. It is switchable through four quadrants.

Digest>From the earliest days of radio, low-band operators have valued directional receiving antennas, such as the Beverage, for their ability to reduce both QRM and QRN arriving from the back side. Beverages require lots of real estate, so the EWE array described by WA2WVL in QST Feb 95 was a great step forward since it could be erected on a modest size lot. Now, K9AY has gone farther and describes an antenna that can be erected in almost any back yard and provides performance equal to that of a EWE.

The terminated loop, simply stated, is a vertical loop of wire, grounded at the bottom center. The loop is fed at the bottom, through a 9:1 transformer connected between a ground stake and one side of the loop. The other end of the loop wire is connected to the same stake through a load resistor. The optimum value of the resistor is between about 390-ohms and 560-ohms, depending somewhat on ground resistance and also which band is in use. At the author's location, 390-ohms gives optimum front-to-back ratio on 160-meters, and 560-ohms is optimal for 80-meters. A value of 470 represents a compromise that is reasonably

effective on both bands.

The shape of the loop is not critical. The author's loop is essentially a triangle with a 30-foot (9.1-m.) horizontal base near the ground and an apex supported atop a 25-foot (7.6-m.) pole. Two of these loops are erected using the same pole and ground stake, oriented 90-degrees from each other. A switch box containing relays is mounted on the ground stake and a four-position selector switch in the shack allows the operator to switch the feedline between either side of either antenna, and the load resistor to the corresponding opposite side, so as to select azimuth quadrants. The direction of maximum gain is in line with the plane of the loop and toward the side containing the feedline.

The size of the loop is also not critical. Larger ones capture greater signal voltage, but also more noise, so the signal-to-noise ratio is unchanged. If the loop is too small, a low-noise preamplifier may become necessary. The author's antenna provides ample signal strength on both the 160- and 80-meter bands without a preamplifier.

The author ends the article with a suggestion that he has not tried. The terminated loops are sufficiently small that it would be easy to build a four-square array of them. This would greatly increase F/B ratio and also narrow the forward lobe substantially. One would have to remember to switch the direction of each component whenever that of the whole array is switched.

PRODUCT REVIEW (PR)
Conductor:Rick Lindquist - N1RL
Sr. Asst. Technical Editor

Title>PR1:A QST Roundup - Three Legal-Limit Linear Amplifiers
Author>Lindquist, Rick - N1RL
Source>QST Sep 97, pp. 72-75
Abstract>Reviews three amplifiers that provide 1500-watts output on all bands from 10- to 160-meters operating in all modes: the Alpha/Power 91B, Ameritron AL-800H, and QRO HF-2500DX.

Digest>This article reviews three high-power amplifiers for use on all bands from 10- to 160-meters: Alpha/Power 91B, Ameritron AL-800H, and QRO HF-2500DX. In deference to US law, they are shipped in configurations that do not allow them to operate on the 10- and 12-meter bands. If purchasers supply proof that they hold valid amateur radio licenses, the manufacturer will provide full instructions for modifying the units to cover the two highest bands. The conversion is simple in all cases.

All three can be operated on either 120- or 240-volt AC power, but 240-volt operation is recommended. Each can be driven to full-power output with drive of substantially less than 100-watts. They are all capable of doing an excellent job with power output up to 1500-watts in

all modes.

The differences between them reflect slight differences in the design goals pursued by the manufacturers. The Alpha/Power 91B emphasizes high-quality components and builds in a wide variety of safety features that protect the amplifier tubes from damage from improper operation. The QRO HF-2500DX aims for high-quality components and extreme ruggedness. The designers apparently feel that anyone using an amplifier of this sort should know a great deal about how to operate it and not need automatic safety shutoffs to save them from operating it in an improper manner. Consequently, almost none are included, not even an output wattmeter. The Ameritron unit represents something of a compromise that offers adequate quality and safety features consistent with minimum cost.

The 91B uses a pair of GU74B tetrodes in grid-driven Class AB1 operation. That tube is a military version of the 4CX800A. The amplifier provides QSK operation (break-in) as a standard feature and is rated for 1500-watts output in all modes. However, if continuous operation in high duty-rate modes is contemplated for longer than 5-minutes at a time, an optional heavy-duty blower is recommended. A 4-year warranty is included. The manufacturer's list price is $2798.

The QRO HF-2500DX uses two 4CX800A tetrodes in grid-driven AB1 configuration. It provides protection against excess screen current only, no other safety features are provided. QSK operation is standard. It is rated for full power operation in continuous, high duty-rate modes for up to 30-minutes at a time. For longer operating times, additional auxiliary cooling is recommended. The manufacturer's warranty is two years. The list price is $2895.

The Ameritron AL-800H uses a pair of 3CX800A7 triodes in grounded-grid Class AB2 operation. QSK operation is available with the purchase of an external auxiliary unit, at extra cost. Shut down is provided for both high temperature and excess grid current. A one-year warranty is provided and the manufacturer's list price is $2295.

Title>Raibeam RB-206B 2-Element Six Meter Beam
Author>Jahnke, Bart J. - W9JJ
Source>QST Sep 97, pp. 77-78
Abstract>Describes a small, light-weight beam antenna for 6-meters. It uses two elements driven 180-degrees out of phase. One is longer than the other, so the radiation pattern is monodirectional.

Digest>The RB-206B is made of two half-wave dipoles driven 180-degrees out of phase, with one element longer than the other, so it acts like a reflector to make the radiation pattern monodirectional. Computer analysis shows that such design will provide the same forward gain, but much higher front-to-back (F/B) ratio than a 2-element Yagi on the same size boom. The manufacturer claims an operating bandwidth of 400-kHz. for SWR of 2:1, or less.

The turning radius is slightly more than 10-feet and the whole antenna only weighs 3-pounds, so can be easily turned by a TV-type rotator. It is designed for use between 50.0- and 50.4-mHz. It cannot be easily modified to operate in other portions of the 6-meter band. The manufacturer's list price is $150, which includes domestic shipping.

Title>PR3:TimeWave DSP-59Y Audio Noise Reduction Filter
Author>Danzer, Paul - N1II
Source>QST Sep 97, pp. 78-79
Abstract>Review of a digital signal processing (DSP) audio filter. It is electrically identical to the DSP-599ZX, previously reviewed in QST, but modified to fit into the cabinet of a Yaesu loudspeaker.

Digest>In QST Dec 96, the TimeWave DSP-599ZX was reviewed. It was described as a digital signal processing (DSP) filter that does an excellent job in noise-reduction and narrow-band filtering for general-purpose use.

Now, TimeWave is offering an identical unit physically modified so that it will fit into the cabinet of a Yaesu SP-5 or SP-6 loudspeaker. For a review of its operation, refer to the digest of the earlier article.

TECHNICAL CORRESPONDENCE (TC)
Conductor: Paul Pagel - N1FB
Associate Technical Editor

Title>TC1:Checking Power Strips
Author>Mandelkern, Mark - K5AM
Source>QST Sep 97, p. 82
Abstract>Power strips that carry the Underwriters Laboratory labels are not necessarily safe to use!

Digest>K5AM reports that when he checked a multi-outlet power strip such as those commonly sold in hardware stores, he got a nasty surprise. The third openings in each socket for the ground pins were not connected to anything. Yet the strips all carried the Underwriters' Laboratories label certifying that they have been approved by that body. He subsequently checked a number of others, all with UL labels, and found several more ungrounded in this way.

This is one more manifestation of the fact that UL approval has little, if anything, to do with the safety of the apparatus approved. For a discussion of what UL approval does and does not mean, see a recent edition of the ARRL Handbook.

The author carefully soldered a heavy wire lead from the ground wire on the input cable to each ground connection on the sockets. He recommends that all hams check their own power distribution setup to be sure that the ground leads on all equipment are adequately grounded.

Title>TC2:Headset-Microphone Feedback
Author>Fechter, Bill - W9NRJ
Source>QST Sep 97, p. 82
Abstract>Microphone and earphone leads must be completely separate; the ground shields must not be connected outside of the transceiver cabinet.

Digest>In this letter, W9NRJ describes a problem that he encountered with his Kenwood TS-940S when he tried to use a headset that combines earphones and microphone in the same assembly. He found that the receiver audio

W9NRJ adapted an ICOM HS-10 headset with an electret microphone to work with his Kenwood TS-940S. A small metal utility box was used for the battery, level control and interface between the headset and transceiver. Leads from both the mike and the ear phones were bundled in one cable that plugged into a socket on the box. Separate leads ran from the box to the microphone jack and headphone jack, respectively. His initial circuit did not work because of feedback; the received audio got into the microphone circuit to the extent that it activated the VOX.

Although the headphone and microphone leads were individually shielded, the shields came together at the plug, and he discovered that connecting the two together anywhere outside the transceiver caused excessive feedback. To solve the problem, he isolated the two shields all the way to the separate plugs on the '940, and had no further difficulty.

Title>TC3:Choke the OCFD
Author>Gaudier, Dale - M0AOP/K4DG
Source>QST Sep 97, pp. 82-83
Abstract>An off-center-fed dipole as described by K1POO in QST Oct 96 did not work on 40-meters until the author wrapped a few turns of feedline into a coil at the antenna, forming an RF choke that solved the problem.

Digest>Mr. Gaudier relates his experience in calculating and constructing an off-center-fed dipole in accordance with K1POO's letter in Technical Correspondence, QST Oct 96. It is a simple dipole made of No. 14 copper wire, about 68.5-feet (20.88-m.) long with feedpoints at 17.4- and 41-percent from one end, meant to operate on the 40-, 20-, 15- and 10-meter bands. Its input impedance is nominally 200-ohms, which is matched by a 4:1 balun fed by 50-ohm coax cable.

When the antenna was erected, the author found that it performed well on 20-, 15-, and 10-meters, but showed no sign of resonance on 40-meters. He discovered that he could solve the problem by winding some of the feedline into a coil to form an RF choke at the feed point. The coil was 5.5-turns, about 9.5-inches (24-cm.) in diameter. The choke apparently eliminated the differential currents flowing on the cable shield that had destroyed the operability of the antenna on its fundamental frequency.

HINTS AND KINKS (HK)
Conductor: Bob Schetgen - KU7G
Sr. Asst. Technical Editor

Title>HK1:A Simple Voice Keyer
Author>Brock-Fisher, Tony - K1KP
Source>QST Sep 97
Abstract>Building a simple voice keyer from a module and a few small parts, all obtainable from Radio Shack. It records and replays up to 10-seconds of audio.

Digest>K1KP presents a very simple voice keyer that he makes from a module plus some small parts, all of which are obtainable from Radio Shack. The module is their stock number 276-1324: ISD VM1110A Voice Module. Two momentary push buttons are added, one for "Record" and the other for "Play". The module will record up to 10-seconds of audio and play it back on demand. The circuit diagram and parts list are included with the letter. It is connected in parallel with the microphone plugged into a transceiver. Its input and output flow on the same line.

Title>HK2:A Pause-Scan Circuit for the Alinco DT-100 and Other Radios
Author>Mindy, Jack - AA2CE
Source>QST Sep 97, pp. 80-81
Abstract>Build a scan controller for the Alinco DT-100 so the user can control it by a push button in the microphone housing.

Digest>AA2CB's letter shows a circuit that causes his DT-100 to scan across the dial, stopping about 10-seconds on every strong signal, then continuing. It uses a single 555 timer chip plus a few passive components, so it can be made very small. He built his and put it inside the microphone housing. A miniature push-button switch is also mounted on the housing that can be pushed to make the scan start and stop.

Title>HK3:Replacing the Memory Battery in the Yaesu FT-2400
Author>Klocko, Bill - N3MPV
Source>QST Sep 97, p. 81
Abstract>How to replace the batteries in the Yaesu FT-2400.

Digest>The Yaesu FT-2400 radio contains a 3-volt lithium battery that maintains the contents of the memory channels. It is apparently installed permanently when the rig is built with no provision for the user to replace it easily. In this letter, N3MPV gives detailed, step-by-step instructions of how to remove the old battery and replace it with a battery holder available from Radio Shack. Once the replacement is made, it will be easy to replace dead batteries. Actually, there is sufficient room to install two battery holders, wired in parallel. With that arrangement, a user can replace a battery before it is completely dead by plugging in the new one in parallel with it. Then, when the old one is removed, the contents of the memory are not lost.

FEEDBACK (FB)

Title>FB1:Product Review, QST Jul 97
Author>Anonymous
Source>QST Sep 97, p. 79
Abstract>In Product Review, QST Jul 97, p. 58, the Standard C-508A includes CTCSS tone decoding as a standard feature. Table 1 should show a "Y" for that item in the listing below C-508A.

Title>FB2:"CW With Your H-T", QST Jul 97
Author>DuBon, Donald J.
Source>QST Sep 97, p. 83
Abstract>In the schematic diagram on p. 53, capacitor C2 shows as 0.1-mF. In the parts list it is listed as 0.01-mFd. The latter is correct.

Title>FB3:"A Remote Antenna Selector Switch", QST Aug 97
Author>Dellinger, Robert - KG8GG
Source>QST Sep 97, p. 83
Abstract>Corrections to the schematic diagram.

Digest>In W5AN's article, pp. 40-43, Figure 1 shows two diodes and two capacitors connected to pin P1. The second diode and capacitor should connect to pin P2, not P1. Also, the cathode of the second diode (the center of the three shown) should connect to the coil of K7, just like the other two diodes, not to J2 pin 3. Thus, for P1, pins 3, 4, and 5, each pin connects through a capacitor to J2 pin 3 (ground) and each pin connects through a diode to the coil of K7, with the diode's cathode toward K7.

NEW HAM COMPANION (NHC)

Title>NHC1:The Doctor is IN
Author>Various
Source>QST Sep 97, pp. 51-52
Abstract>Questions and answers on subjects of primary interest to newcomers to amateur radio.

Digest>Questions considered in this issue include: replacing NiCd batteries in H-Ts with alkaline cells; crimping coax cable; "memory cloning between H-Ts; large vs. small mobile antennas; ways to improve one's chances of receiving QSL cards; the author of the Amateur's Code; and Oscar 10.

Title>NHC2:Getting Started With Slow Scan Television
Author>Glidden, Ramon L. - W5NOO

Source>QST Sep 97, pp. 53-55
Abstract>How an amateur equipped with a receiver and a computer containing a sound card can receive SSTV signals with no extra hardware. Necessary software can be downloaded, free of cost.

Digest>Slow scan TV is actually more like FAX than television because it is a process that sends one picture at a time by radio. It is an analog process and at the receiving end, the picture can be displayed on a normal, analog TV set. Also, the analog signal can be sampled and digitized for display in digital form on a computer monitor. In fact, the latest models of computers come equipped with sound cards, which are primarily digital-to-analog and analog-to-digital (d/a and a/d) converters, that can be made to do the job.

This article describes how anyone having an HF transceiver and a computer containing a sound card can receive and display SSTV images with no additional hardware. All that is required is software, some of which can be obtained, free.

Sending one's own pictures is only slightly more involved. There are several sources of pictures that can be sent. One is a camcorder, or a VCR. Video digitizers can be used to freeze and capture video images from a VCR or TV set, and feed them into a computer where they will be digitized and/or transmitted. Existing photographs can be scanned and digitized by scanners, many of which are now on the market. Or else, one can buy a digital camera for less than $300 which will record pictures in digital form, without film. Another source is to create artwork directly on the computer using software like "Paintbrush".

Most SSTV activity is on 14.230- and 14.233-mHz. in the 20-meter band, but there is also activity on 3.845-, 7.171-, 21.340- and 28.680-mHz., especially on weekends.

Title>NHC3:A Phase 3D Jump Start
Author>Kelly, Jim - KK3K
Source>QST Sep 97, pp. 57-58
Abstract>How one ham has equipped his station to utilize the coming Phase 3D satellite in mode L/S; i.e. with uplink on 1.2gHz. and downlink on 2.4-gHz.

Digest>In spite of the disappointing delays and problems, the Phase 3D satellite still promises to become a reality sometime in the not too distant future. KK3K already has satellite antennas on the 2-meter, 70-cm., and 2.4-gHz. bands, and he wanted to add equipment for Mode L/S, which requires uplink on 1.2-gHz. and downlink on 2.4-gHz. His satellite transceiver is a Yaesu FT-736, and he invested in a 1.2-gHz. transmitter module that will transmit 10-watts on that band. For the antenna, he bought a 35-element M(2) Enterprises Yagi and 50-feet (15-m.) of Belden 9913 coax cable. Figuring a 3-dB. loss in the cable, he calculated 5-watts at the antenna will be sufficient for the purpose, considering the antenna's 18-dB. gain.

For his 2.4-gHz. reception, he bought a 2- x 3-foot (61- x 91-cm.) dipole-fed grid dish made by Conifer, through the R. Myers Communications Company in Fountain Hills, AZ. He mounted both antennas on a rooftop tower with a 2-axis rotator.

Since he lives in Philadelphia, the author is surrounded by a good deal of UHF and microwave ham activity, so he had no difficulty testing his installations. It works fine, and he is awaiting the launch of the Phase 3D with enthusiasm.

Title>NHC4:The MRX-40 Mini Receiver
Author>Bornstein, Steve - K8IDN
Source>QST Sep 97, pp. 59-60
Abstract>Building a tiny receiver, 1-inch x 2-inches (2.5- x 5-cm.) that gives respectable reception on the 40-meter band.

Digest>This article gives construction for "A 40-Meter Receiver You Can Build in a Single Evening!", as the sub-title declares. It is tiny and designed to be used with a very low power CW transmitter.

The receiver is comprised of two IC chips, a crystal, a voltage regulator chip and about a dozen passive components. The entire assembly is built on a circuit board that is 1-inch x 2-inches (2.5- x 5-cm.) in size.

Included is a photograph of the author's tiny station made up of a transmitter, receiver and miniature key, each of which appears to be no larger than 1-inch x 2-inches x 1-inch (2.5- x 5- x 2.5-cm.).

A complete kit of parts, less crystal, for building the transmitter is available from Dave Ingram - K4TWJ, 4941 Scenic View Drive, Birmingham, AL 35210 for $17.00, including domestic shipping. A complete kit for the MRX-40 receiver can be obtained from the author of this article, whose address is: 475 E. North Broadway, Columbus, OH 43214 for $18.00.

GENERAL INTEREST ARTICLES (GI)

Title>GI1:The 1997 VK0IR Heard Island Expedition
Author>Schmieder, Robert W. - KK6EK
Source>QST Sep 97, pp. 28-33
Abstract>Describes the largest, most sophisticated and most expensive DXpedition in history It went to Heard Island in the south Indian Ocean and made more than 80,000 amateur radio contacts.

Digest>The Heard Island expedition was the largest, most sophisticated, and probably the costliest DXpedition in history. In all, twenty men went to that remote, barren island and spent nearly three weeks making amateur radio contacts. They spent upwards of a half-million dollars in the endeavor. They made a total of more than 80,000 amateur radio contacts throughout the world.

The project took about three years to complete, partially because of a false start that was costly in both time and money. They initially signed a contract to charter a vessel, the owner of which absconded with $100,000 of their money.

The island is in the south Indian Ocean, about as remote from civilization as it is possible to be on the surface of the Earth. But unlike some other DXpeditions, the participants were not exposed to much physical danger in getting themselves and their equipment ashore on the island, and back. The expedition was made on a chartered ship that carried a helicopter, and all transport between the ship and the island was by air. During their stay, the weather was not severe.

Title>GI2:The NCDXF/IARU International Beacon Project
Author>Troster, John G. - W6ISQ and Fabry, Robert S. - N6EK
Source>QST Sep 97, pp. 47-48
Abstract>Describes the international beacon system now in operation, covering the whole world. Transmissions are made continuously on five bands: 14-, 18-, 21-, 24-, and 28-mHz.

Digest>The first HF radio beacons, that were established by the Northern California DX Foundation (NCDXF) and the International Amateur Radio Union (IARU), were described in QST in the October and November issues of 1994. This is an update and a status report of the world-wide beacon network, the plans for which were previously described.

Now an almost complete beacon network is operating on 14-, 18-, 21-, 24-, and 28-mHz. By listening to them, any amateur in the world will be able to judge propagation on all those bands to every other part of the world.

The original beacon network was made up of several stations on 14.100-mHz. In the end, it grew to eight stations throughout the world. Now the network has been upgraded to be comprised of 16 beacons, each of which operates on five bands. It is hoped that there will soon be two more beacons added to the net, in China and Russia.

When all 18 stations are active, each beacon will transmit in sequence for 10-seconds on each of the five bands, every three minutes. Each transmission will consist of the callsign sent at 22-words per minute, followed by four 1-second dashes. The callsign and the first dash is sent at 100-watts output power, and the other three dashes at stepped down power of 10-, 1-, and 0.1-watts output, respectively. Those who cannot copy CW will still be able to identify which station is transmitting if they have accurate clocks, since the distribution will be timed through each 3-minute period, repeating continuously. The schedule is as follows:

- - - - - - Frequencies - - - - - - -
Slot Country Call 14.100 18.110 21.150 21.930 28.200

Title>GI3:BARC Juniors
Author>Casler, Dave - KE0OG
Source>QST Sep 97, pp. 49-50
Abstract>Describes a program for youths conducted by the Boulder, CO Amateur Radio Club that has successfully licensed 80 new hams in six years. Other clubs might find the program useful.

Digest>The Boulder, Colorado Amateur Radio Club organized a junior division in 1991. It has become a great success, and through its activities, more than 80 youths have been licensed in six years. Several of them have achieved Amateur Extra Class.

Originally, a retired teacher, Ellie Van Winkle - N0QCX and her husband, Rip - NV0M, a retired electrical engineer, taught a Novice class to a few young students in their home. The pupils were so enthusiastic that the word spread and more and more kids clamored to be included. Soon, the Van Winkles had to ask for help and finally junior program evolved that averages about thirty pupils taught by twelve to fourteen "Elmers". Their goals are: "To teach, understand, practice, socialize, and enjoy Ham Radio activities". They meet every Saturday, beginning with a general meeting that soon breaks up into a number of classes, including code at several different speed levels, and theory classes separated into Novice, Technician, General, Advanced, and Extra levels.

Periodically, the pupils are taken to visit local repeater sites, the Municipal Safety Communication Center, the Ham Radio Museum in Genoa, Colorado, the United Airlines communication facilities at the Denver airport, and other such interesting radio installations. They also have conducted junior Field Day installations, junior Fox Hunts, and other ham radio activities. They even send junior club representatives to the Dayton Hamvention where they participate in the Youth Forum.

The author believes that many other clubs could have similar results and would be happy to consult with them to share experiences. He can be contacted by writing: Dave Casler - KE0OG, 1991 W. Centennial Drive, Louisville, Colorado 80027; E-mail: KE0OG@mfn.com.

Boy, the above was written by a Complete Communicator and a
Realle Hamme, and one who possesses, apparently, the
Knowledge of the Ages.

Most people join a hobby and THEN decide whether it is for
them. The code requirement reverses this, and deters many
valuable potential hams. This is quite simply killing our
hobby. As the ARRL watches its dues dry up, even it will
have to come around, and there are signs that it is doing
so.

Unlike the rest of society, which serves to
make MORE accessible to MORE PEOPLE,

HAM RADIO was NOT meant for everyone.
It requires a DESIRE to be a ham operator.

If you DO want to be a ham operator, you WILL.
If you DO NOT want to be a ham op, you WON'T.

No amount of pushing and prodding will make
this change for most people.

All you can do is show 'em. If it takes, then
it takes. If not, then it simply doesn't.

As for Carl's discussion of "professionals"
being melded into the fold, VHF IS AVAILABLE
WITHOUT CODE. The "foot in the door." Most people
get the taste of ham radio this way nowadays.

Professionals deserve NO special treatment,
no special consideration.

Professionals in the AMATEUR ranks are still
AMATEURs. So are kids, doctors, meatcutters,
cab drivers, auto mechanics, electricians,
housepainters, retirees and even (heaven forbid)
unemployed people.

Sorry, but if these "PROFESSIONALS" wanted in,

THEY'D HAVE BEEN IN LONG AGO.

If they're NOT "in," the desire just wasn't
great enough.

What gets me is that this guy relates these one-in-a-million
anecdotes as if they mean anything, or have any relevance to
code testing. They have none. And in a few years the ships
won't even have Morse Code rigs aboard, so we won't have to
listen to Dick's hoary anecdotes.

The problem with VHF and up only licenses (i.e. mine) is that people are less inclined to homebrew. It's not easy to build equipment for these frequencies, test gear is expensive and there are not as many designs available. Now take HF:
-many designs (at least one QRP morse xmitter per issue of any magazine!)
-test equipment required is in some cases only a multimeter
-layout is far less important
-there is always activity on HF (like 20m), the same cannot be said for VHF, thus without test gear it is sometimes difficult to see if the thing works at all!

Thus I think it would make more sense to open HF up to more licensees, possibly only certain sections and with, say, QRP power limits, but this would allow people to experience homebrew in the easy part of the em spectrum rather than blunting their teeth on 2m SSB or just buying a 2m FM rig.

Amputation des 430 MHz en France? Quand est-ce que ce s'est passe?
Et combien (quelle partie) de cette bande a-t-on coupe?
Est-ce qu'il y a une groupe des radioamateurs francais sur le
reseau usenet pour que j'en puisse lire plus?
Quels sont les indicatifs d'appel sur la bande de 50 MHz en France?

Je vous proposerai d'ecrire des lettres a votre administration
des services de telecommunication demandant la re-allocation
des frequences au service amateur. Le plus des amateurs ecrivent,
le mieux. Peut-etre l'IARU s'interesse aussi pour cette situation?
Est-ce qu'il y a des moyens juridiques (comparable au Bundes-
gerichtshof en Allemagne)?

En tout cas, je me souhaiterai plus d'information sur la
situation du radioamateurisme en France. Est-ce qu'on les
trouve sur une page dans le WWW?

Bonne chance, et 73 de DG0LFH, Jan-Martin

(The original poster wrote that part of the 430 MHz band in
France had been taken away from the amateur service, that
there are many intruders in the ham bands, that amateurs
who haven't passed a telegrahy exam don't get access to 10
meters, and that one has to wait 1 year before one is allowed
to use the 50 MHz band. He asked what to do, and I proposed
that as many hams as possible should write letters of complaint,
that the IARU be informed, and I asked whether there might be
means of legal action. Note that neither French nor English
is my native language.)

Site License puts Simulation & Synthesis on Every Desktop

For general analysis with noise capability, filter and structure
synthesis, and system and receiver engineering support, the
Webb Laboratories Professional Partnership Program is
unprecedented:

http://www.webblabs.com/pp.htm

The one-time $975 investment in the PP Program will drastically
reduce your annual software budget, freeing up dollars for
other needed equipment and analysis support tools. The
larger your company or organization, the lower the PP Program
cost on a per-user basis - the $975 licensing fee is for site-wide
use, and there are no annual fees! More information available
on request - free shipping worldwide!

Roger:

ROFLMAO!!! What, may I ask, do you suggest as an alternative
to a CW demonstration? 75-meter SSB? That ought to be an eye-
opener for prospective hams!!! How about a nice session on a
Packet BBS at 1200-baud? All those lovely YL and For Sale
messages, scrolling across the screen at about two lines per
minute...yummy! Talk about a "potent bore!" Ha! One half-hour
on the Internet will expose a prospective ham to more information
than they could acquire in a week on the fastest, highest-throughput
amateur digital system known!

Face it, Roger...compared to what the average high-school kid has
available on his desktop today, EVERYTHING about ham radio is a
"bore." That's why I don't believe in "selling" amateur radio at all.
Those with a real interest and desire to get involved will come to us,
we don't have to take it to them, and we really shouldn't try.

I've said it before, and I say it again...the ARS only needs public
awareness, not active recruitment, in order to survive. I don't think
we need "growth," just stability. Those clamoring for "growth" are
those with a financial interest in the ARS, pure and simple.

>learn the theory?

>How far are we going to go in reducing the level of the exam
>requirements?

>Purhaps some of you could answer that question for me?

Larry,
This argument (if code goes today, what next) is raised
only by the pro-code faction. Every nocode test advocate
in this debate has consistently called for AND made positive
suggestions to improving the current theory testing.

Does that mean that some bozo won't want to eliminate theory
testing? Of course not, but that bozo has no chance of
seeing that happen because there are valid reeasons for
theory (even if you don't repair or build your own equipment), while
the same is not at all true for code testing.

NOTE - I have crossposted this to the .policy newsgroup which
is where it should then be limited to.

PLEASE - Let's move all the code discussion off the .misc group.
I agree with those that have said it doesn't belong in .misc

Cheers

Yaesu has finally started to offer DPL tone on amateur equipment. I
think the only one so far though is the FT50 dual band radio.
Hopefully others will soon follow suit.

If you want a truely private repeater, DPL is, for now, the way to go.

IME if a non-amateur sees me talking into a handheld, they assume it
is CB. They certainly don't think "Ah, there goes an amateur radio
operator".
>The most common form of amateur radio in public view is the 2m/70cm FM
>mobile station.
I would agree, but I think that very few (even technically orientated)
members of the general public would recognise it as such. CB or PMR
are what my mobile station gets confused with. When you get chatting
with a non-amateur, the first thing people ask about is "How far can you
get with it?", shortly followed by "And don't you need morse to get
a license?".
>The areas of amateur radio that generate most public interest are
>digital modes and amateur television.
>The point I am trying to make is that none of the above requires a code
>licence and that it is my contention that interest in the HF bands comes
>along after the radio bug has bitten.
I am in agreement (well, ish, the HF interest still hasn't come along
for me), but the code test is still a barrier. Many people that I talk
to say that they are not interested in amateur radio as they don't want
to learn morse. The perception that morse is compulsory has stopped many
competent technical people that I know from even looking further into
radio (until I had explained otherwise).

This isn't an argument that the code test should be removed. Even if
it was scrapped tomorrow, the general public wouldn't realise this and
still would think of amateur radio as involving decoding bleeps. If
however many years of having a class B (no code) license has not got
the message out that you _don't_ need morse, then I sincerely doubt
that the actual removal of the necessity for HF access would make much
difference to the numbers entering the hobby.

Do it real breadboard style. Just use a length of plank, drive nails
partially into the plank, and use them as tie points for soldering the
resistors in place. The students can then use clip leads to make up
any combination of the resistors that they want, clipping to the nails.
You can even use a woodburning tool (an old soldering iron with
a tip that's lost its plating) to burn the component values into the
plank. Simple. Cheap. Historic.

Not true. I know several people who became hams after hearing Morse Code. They thought it was very impressive that you could communicate around the world with so little equipment and little power. I am not very good at code but I think it still has a place in the hobby. If you were to take the time to learn it (if you don't already) and communicate with the people on the cw part of the bands you will find young and old are enjoying it.

They make lots of us sick Walt but with the RSGB steering the ship into
their seas in the hope of securing some members what can we expect?
So much for Youth in Amateur Radio when some of the novices have got
more turns on their coils than you or I together.
Make the novice licence provisional, the provision being that they MUST
apply for a full A or B within 2 years.
Get rid of the parasites, the moaners and groaners and keep CW as a
requirement for the WARC Bands & 80 & TopBand. They can have the rest.

I'll take someone with great logic and reasoning, but slightly inferior spelling ANY day over someone with impeccable spelling and grammar who cannot make a sound case for his argument without resorting to ad hominem attacks and name calling.

It's not "laziness" to question and boycott a system that rewards irrelevant and unneeded knowledge. I have a 170 IQ and a university degree -- anything I put my mind to learning, I could learn. But I refuse to kowtow to senseless requirements and waste valuable time learning an unneeded, unwanted, and irrelevant skill, just to join the "old guard" elite. Some of us were brought up to question "why" instead of blindly following "tradition" like so many sheep.

If you don't want to learn to program, there is very little reason to do it,
even if you own a computer. Learning to program a computer requires
dedication, practice and to a certain degree, aptitude. The major
difference between Morse and programming is that nobody keeps you from using
your computer if you can't program it.

>> Also, after a program has been written most people don't want

That's patentedly untrue. There is a wide variety of very excellent
software that has been developed and released for free. Linux, FreeBSD,
the products of the Free Software Foundation, and many many others.

I'll let you in on another little secret: nobody gets rich off of shareware.

>substitute for the current practicum requirement (read morse).

Commercial gear has raised problems for amateur radio. years ago when
you had to build your own gear, you actually had to know what you were
doing, or have an elmer work with you to help you along. Today this
isn't a requirement -- you can just commit the questions and answers
to short-term memory, pass the test, buy a commercial radio, and get
on the air for the rest of your life -- a true appliance operator.
IMO, these people really contribute little to the amateur service,
sans a "body" to "protect our spectrum".

Eliminating the code test, and not revamping the licensing structure
in any other way, will do little if nothing to cure this problem.
The anti-morse contingent has not put forth a comprehensive proposal
to address this need.

>and moan about it as an excuse to insist on maintaining the Morse text.

Rote memorization is not the issue. I've publically stated before on
numerous occasions that I doubt anyone seriously "memorizes" the question
pools. They *DO*, however, drill sufficiently and memorize "cheat sheets"
in order to recognize the correct answer on the examination. Perhaps
increasing the question pools by an order of magnitude (10x) would
cure this problem. However, given that the larger the question pools
are the more time needed to maintain them, I believe a "critical mass"
will eventually be reached where the VEC structure doesn't maintain
any additional questions.

I can't believe that anyone seriously believes that the existing
question pool concept we use to license people in any way, shape, or
form really works. In the seven years I was in college, and five
years I've taught at the college level, I've only *once* seen a
professor give the exact questions and answers out prior to an examination--
and, that was for a senior-level advanced physics class, where the
students were expected to solve the problems and show all their work
(the "answers" were more of a way to "check" your work, to see if you
solved the problem correctly, than the actual item you received 'credit'
for answering correctly.)

>Why don't you just admit you want the Morse test for some real reason,

I just got my new bencher straight key in today, and I'm so looking forward
to using it this evening on 80 meter novice CW. What will you be doing
tonite amateur-radio-related, Carl, other than bitching on USENET? I'll
be hanging out around 3703 -- why not listen in and give me a call if you
can hear me?

I've already publically stated that if we could eliminate the question
pool concept, and replace it with some form of exam generation program

that eliminates the problems a question, then I have no objection to eliminating the existing morse code examination. I do have objections to eliminating the code exam without taking any form of comprehensive licensing-process overhaul, however.

I had to read the above several times to convince myself
that it is really there. There it is. Carrol's real agenda
is to restrict or lower the number of HF hams. I cannot
think of a surer way to drive a stake through the hear of
our hobby, thereby killing it.

Can you?

I literally cannot believe my eyes.

I have to go by my memory on the years but....

The cellular concept was developed the 40's or 50's. Bell worked on it
in the 60's and I believe AMPS was standardized in the mid 70's.

Let take 1979 for an example year. How many scanners wer available in
1979 that covered 800 MHz? Not many. In fact there was not much
consumer equipment available that operated that high except TV sets. In
the 70's even hams had to convert commercial gear to get on UHF
(420-450) in most cases. So, though it was pretty lame, there was an
inherent level of security because the average Joe didn't have, and
couldn't afford the hardware to eavesdrop.

I think it is really a case of the cellular industry underestimating
consumer technology. Sure they could have added voice inversion, or
something similar as you suggested, but what good would it have done?
Again, technology today allows anyone with a sound card in a PC to
decode that. Just like any schmo can buy a scanner that can be modified
to cover the cellular channels.

> Instead, we have a radio system which pretends to be part of the telephone

> the clear using a very common modulation. And when these security
> concerns are brought up, the response of the industry is not to acknowledge
> that the system is easy to listen to, nor to design in some security, but
> to push for laws making listening illegal.

Why not? It's cost effective. I have never heard any cellular provider claim there AMPS systems are secure. I do remember the claims about how cellular service was as clear as regular phone - that was the only big lie I remember <g>. And they did design security. Digital cellular is available almost everywhere. It's biggest marketing point is better security (followed closely by the lie about digital sound quality <g>).

> Now, these don't really seem to be technical issues. I find it extremely
> hard to believe that *all* of the engineers who designed AMPS were

> implausible to believe that privacy could not have been improved by
> technical means in (say) the last 5 years. But the decision to push
> legal methods of giving the illusion of privacy rather than just fixing
> the problem was certainly the decision of the cellular industry.

I would also find it hard to believe the engineers were unaware of it as well. I am sure they were aware of the privacy *issues* but probabaly didn't think it was a major problem considering the technology of the day.

I personally like the idea of cellular eavesdropping prohibitions. I don't buy the arguement that you shouldn't write laws you can't enforce. It *can* be enforced. You can't catch every person who is speeding on the freeway, but t doesn't mean we shouldn'thave speed limits. It get enforced if you get caught. I also don't consider such laws to be unconstitutional - I haven't seen a thing in Constitution that protects one's right to be invade other peoples' private conversations.

I am no idiot. I know that my cell phone calls can be monitored. But if I caught somebody doing it, I can take action against them because they are violating the law - the law is tool tht can be used when applicable. But if you do it in the privacy of your own home and don't make it known that you are doing it, I guess you can go through life getting away with it. I don't care. Just don't do anything dumb that gives the radiocops probable casue to kick your door in.

Law or not, I can't see why its such an issue. I asked the scanner NG a long time ago, "what is the facination with listening to cellphones and cordless phones?" I was amazed that people had the cajones to be honest and admit that they scan for scandalous conversations - guys calling hookers, lying to their spouses, talking dirty, people making drug deals, etc. And then these mouth breathers got pissed at me when I called them vouyers! AFAIAC they rate right up there with peeping toms that use telescopes to look through their neighbors' windows.

So even if it was perfectly legal to listen in on cell phone calls I would still say that those who practice it are in need of a real life or mental health care.

Regards

Hi Larry
Interesting. I thought that a no-coder was simply someone who had a
licence that did not have a code requirement. I have meet many
amateurs who get the no-code licence and then go on to upgrading to

the code licences as their knowledge increases.
I think a lot of prospective amateurs get the nocode licences simply
as an easier access to amateur radio bu,t within a reasonable time, do
upgrade.

Hello. Some one just gave me a radio, its a Yaesu FT-902DM. Its a very nice HF all band transciever. Being fairly new to ham radio, I cannot get this radio to pick up anything.

1. The mic has some broken connections. Untill I get this fixed, I would just like to listen. Does the mic need to be plugged in to listen? (I know it does on some CB radios).

2. So I just think some switch is in the wrong position. I've tried the squelch turned fully in both directions. When I flip the switch marked APF then a light by the APF freq knob lights up, and with the volume all the way up I get a soft radio like hiss. But this hiss stays constant, while tuning, changing bands and modes.

3. It has two antenna terminals, rec only and then a regular PL-259 jack marked ant. Then rec only is an RCA jack. I've tried both.

I hope someone might have some experience with this radio and be able to help me out. Anyone have a manual for one of these?

Should I order a manual?

Thanks so much for any help.

Ryan

But Mike, you claim that "anyone" can pass the theory exams ... even you.

While I admit that the written tests need some fixing and the question pools
need to be expanded to force learning principles, rather than simple
memorization,
the point is that Morse testing is required in order to obtain totally
unrelated
privileges ... on that alone it is TOTALLY arbitrary and unjustified.

> the internet is a bunch of porn-hungry pedophiles, and he'll believe you.

Baloney ... kids have minds of their own ... and more often than not, they
will reject something *because* the oldsters think it's "neat" ... after all,
the "fogies" don't know what's *really* "cool." You must never have been
a teenager, Mike ... I guess you went from rug-rat straight to olde farte in
one step.

No body's suggesting that technical types should "be the ruling class" ... just that they should be able to earn their privileges on the basis of technical competence along with everyone else and should not be "kept out" on the basis that they are not interested in beeping. We are simply talking about RELEVANT qualifications for access to HF, not the Morseodist cult worship that we now have.

What scientific study did you get that (non)"fact" from?

> You yourself stated that "many" engineers refuse to get a codeless tech
> license.

That has been my experience as one who works in the field. It has also been reported as Cecil's experience and that of many others.

[snipped ranting and raving that "no no-code tech has done anything for ham radio"]

> Your Anti-Morse propaganda is once again shown to be complete, utter
> fabrication.

My "propaganda" is anti-Morse-TEST, not really anti-Morse ... you very frequently try to place your little FUD spin on things in your attempts to (DISHONESTLY) allude that those of us who wish to eliminate the Morse TEST actually have some "hidden agenda" to ban the use of Morse, which is, like most of your assertions, TOTALLY false.

> morse test to gain access to HF.

Why do you find that hard to believe??? The Morse test and the forced
devotion of hundreds of hours of useless effort (and it IS useless to
anyone who has NO interest in ever using Morse) ARE a major barrier to
the recruitment of new hams, at least here in the US ... and PARTICULARLY
amongst the technical professionals who we need to attract the most.

> I think that the technical requirement
> of the licence has a large part to play in the JA numbers.

How's that? Japan is virtually crawling with techno-weenies who could
ace any theory test after a 3-day saki binge.

I submit that Japan's cultural bias towards the high-tech and the fact
that they have a no-code HF license are EXACTLY the reasons that they have
such a high number of hams relative to the population.

A decline in growth is still growth.

IMHO, a major problem in Amateur Radio today is the lack of sufficient Elmers to help the newcomers experience ham radio. Before we seek more growth, we need to get a better handle on what growth we have already seen.

Let's be careful, and right up front point out that "old" Metallica and
"new" Metallica aren't the same. I suggest setting aside 25KHz of the
902MHz band for transmitting "new" (wussed-out, wimpy, suck) Metallica,
and permit "old" Metallica on all amateur allocations. If Hetfield
gets his act together and starts writing *real* music again, this
could be reviewed.

> Well, cool. But I demand to be able to transmit Blue Oyster Cult, Iron
> Butterfly, and the Doors. Of course in the bottom 25 kHz of each HF

Add Black Sabbath, Megadeth and a little Corrosion of Conformity and
this would start to really rock...

Oh, I've got an original "Garage Days Re-revisited" CD.

Well, I doubt this is legit, but hey it's all for fun anyway.

The FACTS would appear to be that you cause malicious interferance on
the Maritime Mobile net and when they moved you followed. I don't give a
damn about your telephone fraud but the jamming is quite clear, I've
heard it and I hope to god they issue you the cease and disist order
that you clearly deserve.

Furthermore your licence is not regulated by public opinion, why are you
so compeled to state your case to everyone?

Tim

Exsqueeze me? You say that the requirement should be changed, and then
expect others to counter with an argument why it shouldn't?

The last time I looked, the agents of change are expected to present a
compelling reason (anecdotal evidence is simply not enough) why change
SHOULD be made.

It is not our responsibility to disprove your theory.

All the anti-code crowd has done is present a series of anecdotal
statements (followed by a series of ad hominem attacks) claiming that
there are gazillions of new, high-tech engineers just waiting to get
licenses if it wasn't for the nasty code test for HF privileges.

Direct evidence, in the form of observations from the effects of the
codeless VHF license, do not substantiate that claim. While the people
who got involved in amateur radio through the codeless VHF license
are just as much amateurs as everyone else, and are good people,
what the Anti-Code crowd suggests (that all these engineers are
out there, just waiting -- the same claim they made back in the
80's to justify the codeless VHF license) just doesn't hold water.

If it weren't for the years of discipline, service, and dedication of
the coders, you no-coders would have no VHF. As long as operators, code
or no-code, adhere to the principles and loyalty that surround amateur
radio, then let's all have fun.

What....I thought the the HF bands were part of the radio hobby same as CB, both radio, just diffrent aspects. I have been listerning to the Hams in my part of the world and I can say that they sound just like CB's, or is it that the CB's sound like Hams, they both talk about the same things over here, I do not know what goes on in the larger town and cities but in my neck of the woods on CB any person that does not support the same respect and manners as the Hams show on their bands soon finds that he/she has no one to speak to. As far as code goes, if it is dropped the bands will still be the same, I have heard very little CW being used, most Hams rather speak in plain language than send inpersonal dits and dahs. Yes that is one point that no one has brought into the fray for code or no code, even a SSB contact brings out the "personal" feeling that is not present in a CW contact it always leaves one with a feeling of not talking to a person but a machine.

>Internet access is now a lot cheaper, packet is in decline.

I don't believe this is so. Your Demon account is no cheaper now than it was when Demon started. Furthermore, the price of local calls has largely stayed static.

I think the opposite is the case. The widespread popularity of the Internet has attracted people who would otherwise have come to amateur radio. Additionally, established amateurs (like me and many others such as Walt) are spending more time on the Internet and less on the radio. This latter decline is not reflected in licence figures as we continue to maintain our licences.

Amateur radio TCP/IP has never been, and will never be, a viable alternative to the Internet and those amateurs who have spent money on amateur radio TCP/IP systems have wasted their money.

Ham radio has fallen behind and I do not believe it is possible to catch
up with the leading edge of commercial technology. Possibly the only
development area left is VLF and even there the scope for
experimentation is restricted by severe regulation.

The effect of regulation is observed in the form of a new pastime
amongst UK hams, debating on the wording of licence document BR68 and
whether it permits a particular activity. IMHO, it puts ham radio on
the same level as CB.

What about RAYNET? That organisation does nothing to improve our image
as, in the public's view, it puts us in the "anorak and glasses repaired
with sticking plaster" brigade!

Nick ... I see you've "got Walt's number" ... good for you.

Unfortunately, here in the states many (not all, but many) "higher
class" (a misnomer) licensees have the same attitude. They just want
to keep the playpen all to themselves.

On what the hell basis do you make that wild-assed claim??? I repeat,
the jerks on HF are your beeper cronies, Dick ... maybe you're one too?

[regurgitation of "The Specter of CB" deleted]

> The fact that today we have no enforcement makes it doubly
> important to screen new entrants in the most effective way,
> if at all possible.

The more reasonable view is that the lawless who don't give a crap
about rules could also not give a crap about whether they have a
license or not ... who's going to catch them before hell freezes
over? If the type of people that you claim are waiting actually
existed, they'd be using our bands now and wouldn't give a damn about
code, licenses, or anything else ... maybe your senile cronies buy
your garbage, but anyone with a lick of sense will see it as the
pure garbage that it is.

> > >Anyone who would
> > >let something as mundane as 5wpm Radiotelegraph code (It is *not* Morse
> > >code) should realize that this is a very minor obstacle and the insistance
> > >in eliminating it is much ado about *almost* nothing.

Been there, done that ... all it got me was a demand that I "go faster"
to get anything worth having. You're intellectual dishonesty is showing
REAL bad on this one Dick ... something far more demanding than 5wpm is
required to get useful HF privilege ... despite the fact that those
privileges have NOTHING to do with the code.

> > On the one hand, people say it's the only thing that keeps the godless
> > CB-ers out of the hobby because it is so difficult. On the other hand,
they

See above ... if they existed, they wouldn't give a crap about not
having a license ... those who stay away are the ones who are willing
to obey the rules, no matter how ridiculous the rules may be.

>
> I find it sad that when all other arguments are exhausted there

> Purhaps some of you could answer that question for me?
>
> larry ve3fxq

Larry ... most of us who advocate modernization and growth through
the elimination of outdated Morse forced learning/testing requirements
are also in favor of making the written exams better to assure that new
licensees are technically knowledgeable and competent (unlike so many
old-time beepers, who wouldn't know a MOSFET from a microcontroller if
one bit them on the ass)

There IS NO "move to eliminate all testing and give away licenses" ...
we just seek to make the requirements more relevant and in line with
the technological world we live in ... for the future survival of ham
radio ... ham radio is currently on technical par with horse and buggy
and needs to catch up or "be banned from the highway" spectrally-speaking.

There is also NO "move to ban Morse from the ham bands" ... many of us
have given our personal pledges to not seek or support any attempt to
ban the use of Morse in the ham bands ... some of us have even proposed
that modest "Morse only" sub-bands be established in the lower 25 kHz of
each HF band (where no Morse ONLY sub-bands exist at this time), just to
provide an enclave where Morse ops would not have to compete in any way
with other digital modes. (Morse would still be permitted on ALL ham
frequencies.)

SO, in short, we're not trying to "reduce the level of the exam requirements,"
we are simply trying to make them more relevant to the times.

HOME AUDIO AMP (Needs repair)

TOP LINE SANSUI G-5000 AM-FM HOME AUDIO AMP.

Was very expensive transistorized amp at one time.

METERS: Signal Meter & Tuning Meter

BUTTONS: Speakers A/B; Tone; Sub-sonic Filter; Audio Muting;
Loudness; FM Muting; Mode; Tape Monitor; 4 Channel
Line Adaptor, Source Tape.

KNOBS: Bass; Treble; Volume; Balance; Tuning; Selector of
Modes

MICROPHONE: Mic. Mixing Level Input; Input Phones/Mic.

This unit needs repair and is sold as is.

$75 or any reasonable cash offers considered

or swap for military or Hickok type tube checker.
Will also consider off-brand guitar or bass.
Also guitar or bass amp needing repair/running.

Thanks.

Read QST, either October or November issue, somewhere in it (possibly
editorial) had statistics on US and worldwide drop in amateur radio growth,
with a couple exceptions in small European and 3rd world nations.

You've obviously not been paying attention to what's been going on above 10 meters. We've lost many MHz of spectrum at 220MHz, 1.2 GHz, 3 GHz, 5 GHz, etc. They don't even come close to being balanced out by the few slivers of KHz given in the HF bands (WARC). (902-928MHz excepted, but we'll probably lose that anyway due to the large influx of control devices, computer links, and our lack of band usage here.)

> Code is here to stay.

do you think CWers are better qualified amateur operators ?

what a mistake... I know a bunch of coders with no knowledge of changing the frequencies by VFO. I know a bunch of Advanced without a code (Canada) who know how to change the frequencies by VFO... umm... sure.....

> So if you want access to the HF bands I suggest >you sit doiwn and learn the code. Other wise go buy a CB!

I know code and I use it for 6m + 2m. I just don't understand why it must be a requirement for HF bands.

To operate a club station here in Canada, you must have the Advanced license. I don't understand it either... Although I have Advanced, I don't see any problems with opening this kind of priviledge to basic operators.

I will work on CW to get full priviledge to HF. However, I will still complain today's licensing system after I get CW.

I guess you could call it good if you like foul language, dead carriers, and repeater jamming on almost every Net I try to participate in. I am currently a "no-coder", but I feel that the code is a very effective "Lid" filter. It should stay, and if those who are crying about it spent just half the time studying code as they do complaining about it, they would have their upgrade in no time.

True, there are some jerks on HF, but they are few and far between as compared to those on 11 meters, and the groups of CB'ers who now degrade the VHF spectrum.

Keep the HF spectrum a challenge to aquire. As with most things in life, the harder they are to achieve, the more they are valued and appreciated.

As the singing group The Eagles say, "Stop your whining, crying, and pitching a fit, and get over it"!

Hi Cole and Kathy,
Yes there is a difference. If you are considering using ctcss on your machine, and it is for general amateur consumption, then the only item to use would be a conventional "PL" board. The use of a ''DPL" board would all but eliminate the use of your repeater by most individuals. There are 1000 positive and 1000 negative going "DPL" codes to choose from. Some of the newer ham rigs now are equiped with "DPL." If you don't have a real "lid" problem then your best bet is going to be the use of the former.

Because morse code can only send letter by letter, it takes to long to get a message accross, so a lot of abreviations had to be made. Not only do you have to learn morse code, but you have to learn the Q signal codes as well. Very inefficient.

2100. AURORA WARNING: Middle Latitude Warning and Low Latitude Watch

Newsgroup: rec.radio.amateur.misc

/\

MIDDLE LATITUDE AURORAL ACTIVITY WARNING

WARNING ISSUED: 04:20 UTC, 05 NOVEMBER

/\

Refer to: http://solar.uleth.ca/solar/www/aurpred.html
For Supporting Graphics Forecasts

VALID BEGINNING AT: 00:00 UTC ON 06 NOV
VALID UNTIL: 19:00 UTC ON 08 NOV

HIGH RISK PERIOD: 07 NOV (UTC days)
MODERATE RISK PERIOD: 06 - 08 NOV

PREDICTED ACTIVITY INDICES: 15, 30, 60, 20 (05 NOV - 08 NOV)
(INPUT INTO THE PREDICTIVE AURORA SOFTWARE *)

POTENTIAL MAGNITUDE OF MIDDLE LATITUDE AURORAL ACTIVITY: HIGH

POTENTIAL DURATION OF THIS ACTIVITY: MAIN BELT=24 HOURS
MINOR BELT=24 TO 48 HOURS

ESTIMATED OPTIMUM OBSERVING CONDITIONS: NEAR LOCAL MIDNIGHT

EXPECTED LUNAR INTERFERENCE: NIL TO LOW

OVERALL OPPORTUNITY FOR OBSERVATIONS FROM MIDDLE LATITUDES: GOOD TO VERY GOOD

AURORAL ACTIVITY MAY BE OBSERVED APPROXIMATELY NORTH OF A LINE FROM...

SOUTHERN OREGON AND POSSIBLY EXTREME NORTHERN REGIONS OF CALIFORNIA
TO SOUTHERN IDAHO AND NORTHERN UTAH TO NORTHEASTERN COLORADO TO
NORTHERN KANSAS TO CENTRAL MISSOURI TO KENTUCKY AND POSSIBLY EXTREME
NORTHERN TENNESSEE TO NORTHERN NORTH CAROLINA. OBSERVATIONS WILL BE
POSSIBLE FROM THESE LOCATIONS UNDER A DARK SKY (NO MOON OR
SIGNIFICANT LIGHT POLLUTION) DURING THE PEAK PHASE OF THE AURORAL
STORM ACTIVITY.

ACTIVITY MAY ALSO BE OBSERVED APPROXIMATELY NORTH OF A LINE FROM...

EXTREME NORTHERN SPAIN TO CENTRAL FRANCE TO CENTRAL GERMANY TO
CENTRAL POLAND TO NORTHERN RUSSIA, INCLUDING ALL OF NORWAY, SWEDEN,
FINLAND, DENMARK, UNITED KINGDOM, BELGIUM AND ALL OTHER EXTREME
NORTHERN COUNTRIES IN EUROPE. SIGHTINGS ARE ALSO EXPECTED FROM MOST
OF NEW ZEALAND AND EXTREME SOUTHERN AUSTRALIA.

* Contact: Oler@Solar.Uleth.CA or COler@Solar.Stanford.Edu for more information regarding the Auroral Activity Prediction and Simulation Software.

SYNOPSIS...

A major auroral storm is expected to commence on 06 or 07 November in response to a large X-class proton solar flare observed on 04 November. Most of the storming is expected on 07 November. This is expected to be a significant event, with the potential of producing visible levels of auroral activity throughout all of the middle and many low-latitude regions, particularly after the moon sets (after approximately 12:30 am to 1:00 am local time). Near-optimum observing conditions are expected under dark moonless skies on 07 November.

Other less vigorous levels of activity are expected to be observed on 06 November following the arrival of another observed coronal mass ejection on 03 November. This activity (on 06 November) could produce widely visible levels of activity across many middle latitude regions. But the main event is expected to be observed late on 06 November and particularly on 07 November when the main shocked disturbance impacts the Earth. Activity should begin subsiding late on 07 November and on 08 November.

Observers interested in spotting auroral activity should keep in mind the following helpful observational hints:

1. Dark adapt your eyes before attempting to view activity. Walking outside after having submersed your eyes in bright light will considerably diminish your chances of viewing activity, particularly if it is weak.

2. Concentrate observations near local-midnight when auroral activity is statistically the strongest and the geometry of the auroral ovals is at its most equatorward location.

3. Best observations are made under dark moonless skies. The moon sets on 07 November after 12:30 am local time throughout most regions. Dark skies implies as little light pollution from city lights as possible. Travel to a dark country location away from city lights for the best observations.

4. Be patient. Auroral activity often comes and goes in waves called substorms. Although this could be a moderately intense event, there may be some periods (of perhaps several hours, particularly for those in the lower latitudes) where auroral activity is only visible as a glow along the northern horizon (or southern horizon for southern hemisphere observers). Within minutes, this activity can explode into a diverse array of shapes of curtains, rays and a variety of colors and brightnesses. Patience often pays off.

5. Current conditions can be found at: http://solar.uleth.ca/solar. We will be updating this page as soon as the disturbance arrives. Often, the main phase of the storm may take a few additional hours to begin after the main shock front of the disturbance impacts the

Earth. Refer to this page (and subpages thereof) for complete details.

6. If you need realtime access to current conditions, purchase the software known as SWARM (Solar Warning And Realtime Monitor). This software is the most sophisticated and elaborate software for alerting you (audibly, even verbally) of conditions condusive to observing auroral activity. It will become an invaluable asset to those who need to monitor conditions as the solar cycle picks up steam over the next few years.

7. If you observe auroral activity, we would appreciate receiving your observational reports. Include with your reports the time of your observation (preferably in Universal time, otherwise state what time-zone you are in), what you saw, estimate the brightness of the activity you observed, changes in color, pulsations, movements, or other useful observational features. Also include your estimated latitude and longitude and the duration of your observation. Send these reports to: COler@Solar.Stanford.Edu and we will incorporate as many quality observational reports as we can into our database.

This warning will remain in effect until 19:00 UTC on 08 November. It will then be updated or allowed to expire.

** End of Warning **

EXPECTED HF PROPAGATION CONDITIONS: POOR TO USELESS

POTENTIAL FOR HIGH LATITUDE HF DEGRADATION: VERY HIGH
POTENTIAL SEVERITY OF HF DEGRADATION: MAJOR
EXPECTED HF PROPAGATION CONDITIONS: VERY POOR TO FREQ. USELESS

POTENTIAL RISK FOR GEOSYNCHRONOUS MAGNETOPAUSE CROSSINGS: 60% PROBABLE

SUSPECTED SOURCE OF OBSERVED/EXPECTED ACTIVITY:
A series of coronal mass ejections. The last one observed on 04 November
that was associated with the major X-class proton flare is expected to
produce a major to severe geomagnetic storm on 07 November.

--------------------------------- ---------------------------------
EST. POTENTIAL GEOMAGNETIC IMPACT EST. POTENTIAL IONOSPHERIC IMPACT
--------------------------------- ---------------------------------
SEVERE STORM : 25 % LOW LATITUDES : STRONG MINOR

MAJOR STORM : 40 % MIDDLE LATITUDES : MAJOR
MINOR STORM : 30 % HIGH LATITUDES : MAJOR
ACTIVE OR LESS : 05 % POLAR LATITUDES : MAJOR
--- ---
PROBABLE SI ASSOCIATION : 90% ESTIMATED GLOBAL IMPACT: MAJOR

ESTIMATED FORECAST PEAK PLANETARY 24-HOUR A-INDEX DURING STORM: 55 TO 70
---- ---

COMMENTS:

Activity is expected to begin primarily on 06 November with the arrival of one of the coronal mass ejections related to one of the stronger minor M-class flares observed. This activity could result in periods of minor to major geomagnetic storming on 06 November. The largest disturbance is expected to arrive with a fairly vigorous shock-front on 07 November and produce periods of major to severe geomagnetic storming. Currently, the activity on 07 November is expected to reach or exceed major storm levels. A return to quieter levels of activity is not expected until later on 08 November, barring further solar outbursts.

A middle latitude auroral activity warning has been issued as well as a low latitude auroral activity watch for 06 and 07 November. Consult the web page at: http://solar.uleth.ca/solar/www/aurpred.html for supporting graphics forecasts.

** End of Warning **

Not that I care if anyone makes spelling or other errors, but since it is so important to you morse code fans, you are no better! (see above)

Now that we see that everyone on both sides can make a typo error, lets keep on topic, and not resort to picking out spelling errors when we can't find any thing wrong with the statement being made!

2103. Can you Triangulate on an Inmarsat Satalite phone?

Newsgroup: rec.radio.amateur.misc

I would like to know if portable satalite telephones, specifically those employing Inmarsat technology can be triangulated on or otherwise physically located. How big is the satalite 'footprint' of an Inmarsat satalite? How many are used to cover the continental US? If someone were to triangulate on a satalite phone, would it have to be done from the ground? or by using relative signal strengths from multiple satalites? Aren't the satalite antennas directional (they have parabolic dishes)?

PLEASE COPY YOUR REPLY TO MY EMAIL SINCE I DONT READ THIS GROUP!!

Thanks!!!

No, *MOST* prospective hams determine what the qalifications
are,and proceed to study and meet them. Their valuable time is
wisely and conservatively used in efficient learning sessions
with *NO* time out to bitch, blather and whine on internet
newsgroups about the "Screwing" they got and 25 years later
are still getting, by being "forced" to learn Radiotelegraph
code.
How in hades can your time be so valuable when you have
spent no less than the past 20 years of it doing *nothing*
but griping about the code requirement? And you say "you don't
want to waste your valuable time in learning the code". THAT's
the bullsh*t and there is no better word for it. You sure have
lots of "valuable time" to waste in bitching about it.

First, let me say, that MOST amateurs I know prefer talking to
experimenting (although some others are VERY keen experimenters). Having
said that, preferring experimentation does not necessarily mean that
there will be any less transmissions. I, for one, am not that keen on
talking on the radio, but do enjoy experimenting with things like remote
sensing and remote control using data transmissions. These things can
produce 24-hours-a-day, 7-days-a-week transmissions (well, in bursts,
anyway), far exceeding any time that I would be able to talk.

I will reply both to the grup and to your mail...

1.The answer is both yes and no. It depends on what kind of satelite
phone you are using.
There are currently 4 systems running on the Inmarsat satellites.
In Yes case, the Earth Station has necessary information received under
a call setup.
But the area region is not quite exact, reason : none like to be a
moving point on a big brother's map.

2.There are 4 satellites (at least officilly) and they cover the whole
world.
There is one over West Antlantic, East Atlantic, Pacific, and Indian
ocean.

3. The antennas are directive with a gain ragining between (14-20db) but
they are not only dishes, they can be
squer, rectangular or helio antennas.

If you order a NERA satelite phone you will be provided with more
information.

For system specific information call Inmarsat in London UK +44 171 728
1000, they will be glad to give
you some information.

To order a NERA satellite phone call +47 6684 4700 or ask your local
tele provider.
The NERA World Phone is also sold as MOBIQ and MAGELLAN. All of them
made in the same factory.

Best regards

I thought about doing the Novice license but as I am a Chemistry and Computer Science student I don't have all the time in the world, and I for one don't have the time to regularly go to a class to learn how to use a soldering iron and build a crystal set along with a group of 10 year olds.

Secondly the RSGB, of which I am a member, always seems to have the words Scout and Novice license in the same article which I find annoying (yes, I'm sure some people like the scouts but I never felt a need to become one).

For me the interest in radio is the homebrew aspect and although I'm sure people have designed and build 10GHz SSB gear with nothing more than a screwdriver, a pencil and an AVO, this is not the rule! One can however, get away with that sort of "test gear" on the HF bands. That is the point I'm trying to get across, the fact that the amateur spirit of building one's own equipment, essentially requires the learning of morse. In the 2m transverter I've build from an UKW Berichte article I have (literally) used 100,000 pounds worth of test equipment from the University and my summer employer, how many amateurs have access to that?

In response to Carl Stevenson, who says:
>Many have given our personal pledges to not seek or support...
>to ban Morse.

The ARRL gave us their personal pledge in 1989 that a no-code HF license would never come, that reaction a result of those who claimed a no-code VHF license would result in a no-code HF one. Pledges don't mean squat. What's needed is something on paper that carries a bit of legal weight. Talk is cheap. Or, to say it another way, money talks...and bullwhip walks.

In response to Steve Jones,
The common sense of the matter is that the Morse requirement,
at least in the US, represents a further easing of standards
with respect to exam requirements. The core issue has to do
with easing of requirements, not the usefulness of Morse per se.
That doesn't say Morse doesn't have uses: it has many, and is
especially of use to those who participate in QRP and the QRP
clubs. But the core issue revolves around further deregulation,
code and theory. There's plenty of common sense at work here,
as we've had experience with eased requirements and understand
what results from them.

>

Hey, I'm 28, and I think Metallica is pretty cool.

Of course, I know the rules of the Amateur Service in the US,
and transmission of music is strictly verboten. I'll have to
listen to either MW AM or 100 MHz FM or even HF Shortwave AM
to hear them...or pop in the CD...

They've gotten much less "angry" since they got fame and $$$.

We are currently investigating an interesting link between
employee(s) in the FCC's Compliance & Information Bureau
and the BARF. The BARF is an international Jew hating
group which spreads its messages of hate via amateur
radio and the internet.
Jewish microbroadcasters, amateur radio operators, and CB
operators should be alert to any harassment by officials from
the FCC's Compiance & Information Bureau. Jewish
microbroadcasters should be particularly alert if they are
intimidated or approached in any way by employees of the
FCC's Compliance & Information Bureau. Carefully document
ALL facts.
We will shortly be establishing a web page to expose
corrupt officials inside the FCC. In the meantime we are
using the services of the dirtball network , which is associated
with other groups conducting surveillance of corrupt government
officials and groups intent on harassing Jewish microbroadcasters.
Read about corrupt government officials inside the FCC at:
http://www.dirtball.com/fcc.html

2115. Re:MODS for TH79A(D)

Newsgroup: rec.radio.amateur.misc

From: Chris KH2PM <kh2pm@netpci.com>
Message-ID: <345FEEE1.D47@netpci.com>
Source record: 187443

I have a TH79A that does receive the 800mhz band (all of it). I will admit that it was not bought in the US. Therefore it does have that capability but I don't know how the US-spec units are modified by Kenwood to not recieve 800mhz freqs , ie. a processor mod or a hardware mod. Press the menu button. See if there are 21 menus. Menu 21 on my radio says "Prog VFO 800-999". Menu 20 is "Prog VFO 300-399". I have not seen a TH79 that will not receive the 800 band (or is it they will, but the "cell band" is blocked?)
When in the UHF VFO mode, press and release the F (function) button then press the LOW(LO/HI/EL) button. Doing that changes my UHF VFO from 440mhz to 800mhz band. Doing the same on the VHF side changes the recieve from 144mhz to 300+ mhz.
My radio picks up 800 freqs great! I bought it new and did not have to modify it to get the receive range that it has.
About the memory lockout: What exactly are you trying to do? I can lock out memory channels so when scanning they will not be heard. Or are folks
looking to "blank" the memory frequency so no one can see it? Please clarify....
Hope this clears some things up. If I hear of a mod I will post it.

Chris

Source record: 187444

In response to "norights,"
As I said in my last post, the no-code issue has to do with eased requirements. As long as we have a Morse requirement, there at least will be a holding of the status quo versus making entry into the Service easier. The dumbed down theory exams already achieve easier entry. There's a backlash in the ham community now about making entry easier. For once, that's in line with the country's suddenly-found quest to raise educational standards. It's only taken them a decade to wake up. It will take ham radio a bit longer, but better later than never.

Apparently the majority of the people who don't want Morse code as a
requirement are only able to try a belittle the ones that want to uphold a
higher standard of testing. The people that are for removing code will
also want to remove testing altogether because they can't pass those tests
either. Code is the easiest test in amateur radio so what is the fuss.

Most efficient? How are you measuring efficiency? When examing the
transmitter power, bandwidth and data rate, OOK Morse isn't the most
efficient.

> 2) Amateur Radio Operators should -> Be capable of utilizing it well!

Why? This sounds like an unscientific opinion, I'm interested in knowing
your objective scientific basis for this statement.

> 3) Every tool is an important tool -> A full tool box is the best box!

Again, there's little science in this statement and a great degree of
opinion. A toolbox cluttered with arcane tools is perhaps not as good
as a toolbox with a smaller set of commonly-used tools.

> I am by no means, a CW fan... BUT as a trained electronics technician, it
> is important to stress that CW has the best signal-to-noise ratio. That's
> reason enough to maintain our current requirements.

According to your web page, William, you seem to value science and the
search for knowledge; your statements regarding OOK Morse are surprising,
then, since they seem to replace objective science with traditionalism.

If you're interested, Phil Karn has a great deal of interesting
information (with demonstrations!) at:

http://people.qualcomm.com/karn/ham.html

Enjoy.

OK Bob, lemme see here... According to the book:
Pin 1 +12 V
Pin 2 Jump to Pin 9
Pin 3 Jump to Pin 4 and 11
Pin 5 N.C.
Pin 6 N.C.
Pin 7 - 12 V
Pin 8 N.C.
Pin 10 Jump to Pin 12

And that, as they say, should do it!

Perhaps if Morse were dropped from HF frequencies they could replace it
with practical hands on circuit building in a group environment. Lets say
put together a DSP kit or build a QRP rig and put into service to pass.
What do you think?

I'd like to know of your ideas on a dual band base station homebrew antenna. I want to make something with a LITTLE directivity. I don't want so much directivity as to reject all signals 180 degrees from the beam direction. I want it to handle about 50W. It should be vertically polarized. Any plans, URL's etc. are welcomed

Yeah, kids these days don't have any taste in music and probably
don't listen to Metallica. Sure, they listen to "new" Metallica
but that doesn't count. Must be Deignan's "decline of society"
or something.

> Of course, I know the rules of the Amateur Service in the US,
> and transmission of music is strictly verboten. I'll have to
> listen to either MW AM or 100 MHz FM or even HF Shortwave AM

Well, I'm sure we could find at least one FCC staffer that would
listen to "Master of Puppets" and decide it doesn't count as music ;-)

> They've gotten much less "angry" since they got fame and $$$.

Yeah, and it really shows in the sorry excuses for albums they've
released since 1990. I can't believe it; "... Justice ..." was so
outstanding, then "Metallica" was, um, well, not outstanding.

Maybe Hetfield needs to get pulled over and beaten, or something,
to help him get pissed off again.

>at those who maintain that code is "the only way to go."

So, do you really believe if there were N times as many amateurs that
the price for VHF radios would be current $ / N ? Sorry, it doesn't work
that way. Even if we doubled the number of amateurs, how many buy a new
VHF radio each year? 10%? 20%?

>But ham radio is a discipline. There are rules to follow and certain
>etiquets (sp?) to abide by. I would hate to see the hobby become
>another 11 meters, where there is no discipline at all.

Its getting that way, the more and more we lower requirements to appeal
to the "lowest common denominator" of society.

>It's bad enough now, even though the offenders have passed all the code tests.

That's really a value judgement. Most of the FCC's enforcement activities
are centered on HF, where (surprise) everyone has passed a code test. We've
seen some VHF-related enforcement activity, but it usually has to do with
interference with another service.

>I don't think that full privileges should be
>granted because someone has passed a test by rote memorization. So
>what's the answer? I don't know.

Neither do I. However, I don't think merely eliminating the code test,
for the sake of eliminating it, is the answer.

>But should we allow relaxation of
>regulations just for sheer numbers in the amateur radio population?

Absolutely not.

In response to Bill Sohl,
Again, you've missed the point entirely, as usual (common for a politician such as you). With respect to the issue of the ARRL pledge regarding NO no-code HF, the entire idea was to open up that door via VHF first, on the way to eased requirements.

Which is precisely why no-code HF isn't getting through via soft, soothing words this time. That is to say, hams learned their lesson. If the powers-that-be want no-code HF, they're going to have to FORCE it through by proclamation. After all, you fellows "have to protect our phoney-baloney jobs, gentlemen!" (Mel Brooks, Blazing Saddles, 1974).

Regards,
Vince, WB2EZG

In response to YL Shih,
I see you also miss the point, professor. The entire idea of the "pledge" from ARRL was to open that door, eventually, to a no-code HF license.

Hams took that bait, once. The proof in the pudding is that the powers-that-be won't be getting away with the next phase of their overall agenda unless they _force_ the issue by proclamation. They're not going to be able to get away with it with a cogent argument.

Get it, NOW?

Regards,
Vince, WB2EZG

Yeah, I have the electrician I just hired downstairs wiring in the new 80 amp 220 line ;)

The way I figure it, I'll only need to drive it with about 6 watts from my FT-900 for legal limit... and if the lights in the neighborhood start dimming..... hey, dont look here!

O'brien was checked out already. He has no assets. He
rents in a poor section of town, owns one or two old cars
which he might be making payments on. He is heavily
in debt. His only assets are his computer, radio gear on
which beer has been spilled and cigarette smoke blown
into. Oh, he does have a trick bird, name after an
alcoholic beverage. Legal translation: ZERO ASSETS

When he finally libels someone with deep pockets, they
will slap him with a court injunction.

It is caused by the signals being being reflected off parked cars then multiplied by the number of buildings. These signals are referred to as carmonics.

Several years ago someone PAID for an ad in the Yellow Sheet which said
that I was selling one of those 10kw Collins amplifiers. I got a call
from Italy, a call from someone representing an Italian, and a call from
Japan.

I had never even heard of the amplifier until I started getting these
international phone calls!

Draw your own conclusions.

This does not surprise me.

My messages to the Chairman and Secretary of the DCC in the last 6 weeks
have neither had a reply nor an acknowledgment. Looking back over the
last 6 months, I cannot recall a single occasion when the Chairman has
bothered to respond to a message from me.

You have given me an idea, perhaps I should also correspond directly
with the RA!

As despicable as such hate mongering is, I feel censorship is still a
greater threat to us all. One of the great positives and negatives of the
"Internet" is the free flow of information.

>a bit. Citing "public service" aspects doesn't change the
>public's perception. The public just doesn't know about ham
>radio because NO ONE TOLD THEM.
>Len Anderson

Len is dead on target with his comments as to a general
lack of PR for amateur radio. One thing I did locally was
to get our Township library to order a couple of the introductory type
video tapes and have them added to the libary's video collection.
That can't force people to borrow the tape, but at least it is
there when people browse the available tapes.

Another possibility is to donate the tapes and or intro
books (study guides) to the library and to have a local
ham's phone number in the book or on the tape
as a contact for help.

There are many other things hams can do to attract newcomers,
it's just a matter of apply basic PR principles.

The Radia1 Corporation, a major internet service provider,
canceled an internet account which was being used
by KD4CDB and the BARF organization to spread hate
across the internet.
You may view their official statement at this location:
http://www.radia1.com/pms21/

We applaud the Radia1 Corporation for acting responsibly
and recognizing that hateful, vicious, and false attacks on
Jewish citizens will not be tolerated!

Previous to the Radia1 Corporation action, another major
internet service provider, the Bellsouth Corporation, also
canceled an account being used by KD4CDB and the BARF
to spread anti-Jewish hate AND dangerous threats over
the internet. This action can be verified by contacting
abuse@bellsouth.net or you may use dejanews.com
to view the thousands of hateful & threatening messages
posted by KD4CDB over the USENET.

Contrary to statements issued by the BARF, their dangerous
and hateful anti-Jewish organization, has once again been
exposed as the hateful organization that it really is.

Thank you Radia1 and Bellsouth for your responsible
actions!

We also understand that a prominent Jewish attorney in
Atlanta is presenly drafting a legal action which will call
for Mindspring Enterprises of Atlanta to act responsibly
in providing internet services to dangerous hate groups
such as the BARF.

This may sound like good news to you but not to me.

I don't like "hate mail" or hate groups.
I decide what is what.
You are proposing that you are better than I am at judging this material.
I take this as a personal affront and a serious threat to my freedom.

Your encouragement of censorship of "bad" things is conditioning people
to resign more and more of thier freedom and thoughts to others. Those
others are not malevolent. The errosion of freedom in this contry will
lead to a disaterous outcome. It alway has and it always will. You want
to protect your self spend time educating people not fostering ignorance
and hiding from the "bad" things

How do you respond.

You probably want to read 97.113(d) again, Tim. Just because something
is digitally encoded does not make it encrypted; the use of a code or
cipher *intended to obscure the meaning* of a transmission is illegal,
but there's nothing illegal about using any digital coding otherwise.

The distinction between "encoding" and "encryption" may appear subtle but
is quite clear.

Hallo
I am looking for any information or datasheets on the following divider chip
used in the Motorola MCX100 VHF mobile radio.

The numbers are the following:
M6863
and
M8142

This mobile radio is quite old probably early 80's so if you have a data book
from that era it might be helpful.

The chip receives 6 times 4 bit words to program a 65/64 modulus prescaler.
ANY help would be appreciated.

Not the point: You can point to no compelling reason to keep the code test
requirement. THAT is the challange: As a "hobby only" activity, CW may be
done (certainly), but to REQUIRE the testing for it requires the
"compelling reason". My point here was that CW is un-necessary -- so you
cannot say, "We absolutely NEED to know CW, hence the requirement."

> monitoring public safety freqs during an emergency.)

Exactly: You cannot point to emergencies and disasters as compleeing
reasons to require CW testing for HF access. I have heard amateur-related
disaster communications on HF-SSB. As has been pointed out repeatedly, CW

has no place in disaster communications (in the real world). You have to
find something else as a reason to justify continuing the test.

> a "lid filter", so a litmus test of whether or not it has served as one
> is irrelevant and not a compelling reason why the code test should be
> eliminated.

I agree here, but only up to a point. Many pro-code-test advocates point
to CW testing as a filter, to keep out the CB'rs. As you note, there is
still some of this activity filtering through, but it is attenuated --
though we have no data on whether the CW or the written act as more of a
filter for this. The reason CW operations are more polite has to do more
with the inefficiency of mode: meaning that it is much more difficult to
put a lot of the flames and bad language across when you have to spell them
-- they do seem to lose much of the heat, that way. But remember, ALL the
HF flamers in this country passed the CW.

Remember, it is now up to you to offer compelling reasons that the code
test should be kept. As you note, a "lid filter" is not one of them.

> > and the fact that it is not needed for MOST HF communications.

> There are many aspects to the testing process which are irrelevant for
> communication on HF. Why test me on VEC regulations in the Extra test
when
> it has no bearing for me to operate those additional 25kc CW and SSB
> chunks?
>
That's a "no no"! The problem isn't for me to justify the questions on the

written, but for you to justify the keeping of the code test. However, allow me to point out here that if you fail those questions in the Extra test which ask about the VEC regulations, you can still pass the test and earn your Extra. The same cannot be said about the CW testing. You can choose to ignore the VEC portions of the hobby, and still enjoy those additional chunks of spectrum. The question comes back to finding a compelling reason for the code test, which has required everyone to pass for upgrade.

> >If you wish to keep it, you must give logical and compelling reasons

> > Our reasons ARE logical and compelling. Now it's your turn.
>
> You have presented nothing logical and compelling. WHat you have posted is
> a series of personal opinions, jaded by your desire to eliminate code as a
> test element. My opinions, in response, are just as jaded, of course.
>
Naturally! But the charge sent out to the nations was to find compelling reasons to keep the CW test, not for them to find compelling reasons to change it. As I look over the posts, I can find NO logical and compelling reasons to keep the testing. As to my "personal opinions" --
Fact: CW is not used (nor is it included in the planning for use) in emergency/disaster situations.
Fact: It is not part of any other radio service.
Opinion: CW is no longer needed. It is hobby commnications, only. There is no need to keep on requiring the test.
Opinion: CW was not intended to be a "lid filter", and should not be used as such.

> There are logical and compelling reasons to eliminate the code test, yes.
> However, there are also logical and compelling reasons to maintain a code
> test.

I am still waiting to see the logical and compelling reasons for keeping the code test. As you noted above, I see opinions -- but no reasons.

> Neither side of this issue is no longer willing to acknowledge this,
> and work for a compromise. In many respects, the pro-code folks feel they
> have already compromised with the creation of the codeless VHF license,
> and given that all the benefits we were supposed to see as a result of
> that license creation have not materialized, question the arguments used
> by the anti-code crowd to justify creation of a codeless HF license

I do not know what benefits were supposed to accrue from the codeless Tech, but I can see many. Most of the hams involved in public service and safety work, and in our reletively minor disasters ARE the no-code people -- while the vast majority of those who passed the CW are sitting on their fannies doing nothing to help anyone else.

As to neither side being willing to work towards a compromise, I see all sorts of offers and ideas from the "no-code-test" people, but see NO offer of any compromise from the "pro-code" crowd. Do you have one to suggest?

> I believe, and do others, that more is wrong with amateur radio than just
> eliminating the code test will fix. In many respects, I believe that
> eliminating the code test WITHOUT implementing other corrective action
> before or at the same time will just create further problems and an

of
> the anti-code camp can do is beat their chests and hurl personal insults
--
> "luddites", "fanatics", the list is endless -- rather than put forth
> a comprehensive restructing plan. Instead, they only want one thing --
> eliminate the code test.

I agree that there are a lot of things that can be fixed to make our hobby better. I also see a problem trying to do everything all at once (can you imagine the mess?!). But the problem still remains the call for compelling reasons to keep the code test. Barring such, I would guess that it will change. I am certain that it will change eventually, anyway.

I agree that many of the vocal "no code test" people let their mouths (keyboards!) run without engaging their brains. I note that you are silent about the "pro-code-test" people who do the same.

With the charge to find compelling reasons for keeping the code test (not find compelling reasons for keeping it) -- the code test, as it is today, can no longer be justified. My goal is to find some compromise that will suit the majority. There are many that have been offered that I would agree to.

I saw in one of your posts that you prefer not to take these discussion "off the newsgroup", and I respect your reasons.

Thanks for the conversation!

Jim Kelley writes:

>And, the repeater input is an allowable means by which to control the
>repeater.

If the repeater is on 10 meters or 2 meters, the above statement is
absolutely false.

Control by radio must be via an auxiliary station.

Auxiliary stations are not allowed on any frequency below
222.150MHz.

It's just that simple, regardless of all the chatter and misdirection
related to "ancillary functions", etc.

Well put, Ed.

I take these actions as a personal affront to my freedoms. I alone decide what is and is not appropriate for me to read. I do not need others to decide for me. While personally I would never endorse such comments as those put forth by BARF, neither would I act to censor them. What speech or words that we don't like should we ban next? Perhaps someone will decide that *my* views are offensive and decide to ban me.

In lieu of nothing illegal in nature, simply censoring a site because you disagree with its views sets a very dangerous precedent. I, for one, will be sure not to do business with the companies that encouraged and supported this action.

I visited the site, and saw no reference to ham radio, KD4CDB,
or BARF.

I also noted that KD4CDB and BARF seem to be spreading their
pathetic agenda just fine and are *not* kicked off the internet.
http://www.mindspring.com/~kd4cdb/
http://www.angelfire.com/in/w9xn/

I also wonder who "news@truth.org" really is? Anonymous persons
who hide behind right-wing sounding names like "TRUTH.ORG" are
sort of scary too! At least we know who the jerks are at KD4CDB
and BARF. Who are you?

And why are you bombing newsgroups with 8 or 9 copies of the
same identical message? Have you also dropped thousands of
leaflets from camoflaged aircraft flying dusk missions over
Atlanta?

And who cares if the "prominent" lawyer is Jewish, Budhist,
Christian, Shinto, Shi'ite, or agnostic?

Well, there were two issues I was thinking about when I posted, one was the copywright, the other was the FCC. I wasn't sure which way you were going but in light of the above I would disagree that you are not in violation of copywrite protection. In the 90's most of that legal mumbo jumbo was re-written to include any form of electronic media or recording including digital. While PERHAPS you are not liable for sending it, I must believe that the person receiving it would be. The fact that it was returned to a 'listenable' or usable form would seem clear. Not that I actually give a damn whether someone had a bootleg recording, but the topic was interesting :)

I wonder how the FCC would view transmission of a copywrited piece of work? Written, video or aural? I mean if having a 'bootleg' copy of copywrited material is a misdemenor or felony then wouldn't the transmission or 'delivery' of such goods be a part of the crime? Don't we have any good ambulance chasers on this NG who can help? :)

Leslie,

In the US, the FCC imposes no limit on the power your amateur radio transmitter may be capable of, only on the amount you actually generate. It is not illegal for me to own a 10KW transmitter. I can use it on the air, so long as I do not use it above the legal limit.

In response to Bill Sohl,
As was well established last year, the ARRL tried to bull through their no-code stance with a flawed Survey, and got nailed silly at doing it. Thus, the ARRL has removed itself from taking part in any future Survey on the matter.

As I've mentioned, if any representative of the "no-code" contingent had developed any CONTINUED sense of credibility over the last five years, the movement they back might have had a chance. As it is, the movement is stuck. What can I say to a fellow who still believes the Ameco license manual had exact questions and answers published back in 1958, after your statements have been nailed as a pure fiction in the same Ameco study guide you cite?

Regards,
Vince, WB2EZG

Another pathetic little Herbie whore who is mourning the
loss of his great Herbie, KV4FZ, the convicted felon.

Get real. Schoenbohm was convicted by a jury of
twelve of his peers of THREE telecommunications
felonies. He's nothing but a criminal and what you little
Herbie whores say will never matter. Hear this you
pathetic moron, it doesn't matter what you or I say.
A jury found him guilty and ONLY their opinion counts,
not yours or mine.

Get a life you fruit. Your leader is gone!

Vincent Biancomano <103520.355@CompuServe.COM> wrote:
>In response to Hans Brakob,
>Wrong. The president is a representative of the League.
>And so are the directors. They pledge, they're committed.

No, if they pledge it doesn't mean they're committed at all. Whether they follow through may indicate that they are men of honor or wisdom (not necessarily in direct correlation to the stated position). But there is no force to compel their individual committments, the ARRL's committment, or member hams' committments.

If the current ARRL administration makes a "pledge" that all hams will honor a moratorium on CW use from 0000UTC to 2300UTC worldwide, WB2EZG would honor this? Not. The ARRL has no power to commit non-ARRL hams for sure. Neither does it have any power to commit even ARRL hams. The only question is whether it can commit future ARRL administrations. The reality is that it can't, no matter its intent. All it can do is sign contracts as a corporate entity and attempt to fulfull them, failure by a current or future ARRL administration may lead to court action to compel them to fulfull such contractual obligations, but that is it and it is by no means certain. Do you have a signed contract available for examination? You don't have one? Too bad.

Even the US Congress doesn't have the power to bind future Congresses. The only thing that binds the future is inertia - i.e., the difficulty of changing laws and policies once special interest groups have aligned themselves according to a certain status quo. The history (which you are so fond) of legislative debate demonstrates this. If you think that a pledge of a prior administration is enforceable, just try to bring suit against current income tax law based on the "pledge" of the early 1910's congress that no one would ever dare to apply income tax rates higher than 10%. Or try to bring suit for the "pledge" of the 1960's congress that civil rights laws would never be used in support of racial quotas. Good luck.

On Thu, 6 Nov 1997 13:27:41 -0800 (PST) Jim Kelley <jwkelley@uci.edu>
writes:
>I implore you to please read 97.213 and my references to it again

>Hans.
>You are correct that repeater links and auxiliary stations are not
>allowed to operate on 2 meters and 10 meters. However there is no
wording
>which specifically prohibits control and receive audio on the same
repeater
>input channel.

Sure there is! 97.213(a) states a station may be under telecommand
(remote control) if "There is a radio or wireline control

link between the control point and the station sufficient

for the control operator to perform his/her duties. If
radio, the control link must use an auxiliary station.
If radio, the control link must use an auxiliary
station."

A repeater is a "station" so remote control via radio can ONLY be via
an auxiliary station.

>97.3(36) simply states that when under remote control (as in - not
>under local control) a control operator must have a means by which to
>perform his control operator duties. They describe that means as a
>control link. Control links for the purpose of remote control via a
repeater
>reciever are not specifically described, defined, or limited ....

Of course they are not SEPARATELY described..... 97.213 applies to ALL
stations on the surface of the earth (or withing 50KM). The majority
of all 2M repeaters are within that zone.

>A repeater link and a control link, judging by the context in which
>the terms are used, are two distinct types of things.

No, they are not. A control link is a control link, regardless of the
type of station it controls. There is no type of link called a
"repeater link" in the rules.

>I would be happy to stand corrected by an official of the FCC who is
>familiar with cases in which the subject has come up.

Call the ARRL Regulatory Information desk. They can fax you copies
of FCC official letters regarding this exact matter. Call Tom Fogerty,

John Hennessee, or Lisa Kustosik. I think any of them can provide copies

of the FCC letters.

>I know that it is not illegal for me to control our club 2 meter
>machine via the input....

There MUST exist a separate control link, other than on 2-meters, if
third party traffic is in progress. The fact that you have a phone
line control link makes your club repeater legal. It would not be
legal to use that repeater for third party phone patch traffic if
the only way to control it was via the 2-meter input.

>Please review carefully this letter to you, and the one which directly
>preceeded it, and you should begin to see my point.

I have read them all several times, and the flaw in your position
is the notion that control links for a remote repeater are somehow
different than control links for other types of remote stations.
They are no different, and must comply with 97.213(a). A remote
station is a remote station. The FCC does not divide them into
"remote repeater" and "remote any-other-kind-of-station".

Help !! I am getting Cordless Conversations !!

I live in one of three complex, where each complex holds 200
students... and I am getting a bunch of cordless phone conversation
on my 2m rigs... especially: 147.060 and 146.520.

I believe this is a supilious signal from the cordless... should I
keep listening or change the frequency to be nice ??

Art:
I believe you're absolutely right about the market and higher prices
for VHF/UHF gear. As it is now, an entry level ham can't afford a new
HF rig but VHF/UHF HT's are usually within reach. I too have to laugh
at those who maintain that code is "the only way to go." I guess my
point was not to slam the no-coders, but to slam both who maintain their
way is the only way. I personally like working code occassionally. I
have a hell of a time keeping up with 10 wpm, but for me it's fun. But
ham radio is a discipline. There are rules to follow and certain
etiquets (sp?) to abide by. I would hate to see the hobby become
another 11 meters, where there is no discipline at all. It's bad enough
now, even though the offenders have passed all the code tests. As with
most things in life, privileges are granted after proving a certain
proficiency in that field. I don't think that full privileges should be

granted because someone has passed a test by rote memorization. So what's the answer? I don't know. But should we allow relaxation of regulations just for sheer numbers in the amateur radio population? Is it right to say we'd rather have a slight (or great, I guess) decrease in the amateur population to gain a greater percentage of good operators, or to gain in numbers at the sacrifice of a greater percentage of bad operators? Catch 22. Thanks for the reply-

Rick Collins, N8CZA

Keeping ham radio stuck in the dark ages is NOT "upholding a higher standard
of testing" ...

> The people that are for removing code will
> also want to remove testing altogether because they can't pass those tests
> either.

That's complete bullshit and if you paid any attention, you'd know that I
and virtually everyone else who advocates the elimination of the Morse test
(not the mode, just the stupid test) also advocates making the written tests
better so that we don't have more idiot extras who don't even know Ohm's law
or how to cut a dipole to resonance.

> Code is the easiest test in amateur radio so what is the fuss.

Maybe it was for you ... some people have a knack for it ... some don't.
I learned the code and have used it quite a bit, though not in recent
years ... it was just too damned slow and boring to hold my attention.

I am also an RF engineer with over 25 years of experience and I've seen
ham radio lose out on hundreds of highly-skilled folks who would have made
great hams and could have contributed a great deal ... and the only reason
that they chose not to become hams was because of the code test and the
narrow-minded olde fartz who insist on forcing it down their throats.

No problem ...

> Why don't we leave the CW requirement for the CW segments of HF and
> the phone segments to those who want to you use phone.

By the "CW segments" do you mean the lower 100 kHz of 6m and 2m,
which are the only "Morse only" sub-bands in existence here in the US???
(and where NO Morse test is now required)

Or are you actually referring to the "digital bands" (the lower half or
so of the HF bands)???

> Personally I like the idea of morse code. It's the Camel man's way to
> communicate

You mean like "cough, cough, dying by inches" ???

> (or maybe I watched to many James Bond movies).

I think so ...

> With morse code
> the simplest tranceiver could get you on the air even in conditions when
voice
> won't get trough.

Perhaps ... but with modern digital methods (including equipment that's
negligibly more complicated than that OOK Morse transceiver) you could
operate at signal levels where the mere presence of OOK Morse signals would
be impossible to detect by ear, let alone to have rapid, accurate copy.

> If you want to communicate easily from anywhere in the world maybe you should

> use a telephone, cell phone, fax ,email or whatever tickles your fancy.

So your assertion is that "Real Hams insist on doing it the HARD way" ???
(try working smart instead of hard for a change)

2208. Autopatches and Control Operators

Newsgroup: rec.radio.amateur.misc
Date: 1997-11-06 00:00:00 UTC
From: k0hb@juno.COM
Message-ID: <19971106.023715.12110.0.k0hb@juno.com>
Source record: 187386

About every 13 moons, the question of third party (autopatch) traffic over 2-meter repeaters comes up, and specifically what constitutes a legal "control" operator. Invariably someone will pop into the conversation and insist that the control operator can be the 2M operator on the 2-meter repeater input. Invariably that someone is wrong. Here (cutting out all the misdirection and wishful thinking about "ancillary functions" and other red herrings) are the pertinent rules.

1) Q: Is a control operator required? After all, repeaters are allowed to be under automatic control.

A: The repeater cannot be under automatic control during third party (autopatch) conversations. (97.109(e)). Third party communications
are only allowed when a control operator is at a control point (97.115(b)(1)).

2) Q: OK, it's my 2-meter repeater, so as control operator, I choose to control the repeater via the 2-meter input from my car. Is this a proper "control point"?

A: No. 97.109(c) specifically requires a control operator at a control
point. 97.213 requires that a remote control point can be connected to the station (repeater in this case) either by radio or wireline. If by radio,
the control link must use an "auxiliary station"? Auxiliary stations cannot
exist on 2-meters, (97.201(b)) therefor you cannot perform the duties of a control operator on the input of the 2Meter repeater.

In a nutshell:

During third-party operations, there must be a control operator at a control point.

That control point cannot be connected via a 2-meter frequency (ie, repeater input).

Please elaborate on the privileges a "Class A" licensee is permitted.
Is it OOK Morse ONLY on the HF bands? If so, it's really no incentive.

Even our "Tech Plus" class here only allows OOK Morse in very small,
mostly trashed by foreign BC, sub-bands, except on 10m where SSB and
packet are permitted on a small sliver.

What the pro-code folks "conveniently" (try to) forget is that what they consider to be "their CW bands" are ACTUALLY the "digital bands" and they are shared with all other non-voice modes.

Many of the technical folks who would, in the absence of the Morse hazing ritual, likely experiment with better techniques would be interested in participating in the development of more modern digital modes for HF, not in chasing DX, contesting, and collecting wallpaper.

Banning any technically qualified ham from the HF bands, just because they have no interest in beeping is stupid.

Message-ID: <34616A52.15F0@ezl.com>
Source record: 187396

I worked a couple of stations during the recent CQWWDX SSB contest that I can't figure out which country they are from. Any help would be appreciated. The first is 3E1DX in zone 07 and the second is 4B1BEF in zone 6 (Mexican maybe?). I need to know the countries to send in a log and score. Thanks for your help. David N9VFR.

2219. I sell Big Amplifier & Antennas

Newsgroup: rec.radio.amateur.misc
Date: 1997-11-06 00:00:00 UTC
From: Sandro <s.rovatti@rsadvnet.it>
Message-ID: <63ro3t$r0k@server-b.cs.interbusiness.it>

Cross-posted to: it.hobby.radioamatori,rec.radio.amateur.antenna,rec.radio.amateur.dx,rec.radio.amateur.equipment,rec.radio.amateur.misc,rec.radio.cb

I sell the following amplifiers HF, all under perfect conditions.
3 Ampli Collins 208U10, autotuning 2-30 Mhz, 10 Kw continues, with exciter
Redifon/Harris.
3 Ampli Siemens, autotuning 1.5-30 -Mhz, 10 Kw continues, Siemens.
2 Ampli Collins 205J3 new, modified by the Collins 45 Kw pep, autotuning
2-30
Mhz.
1 Ampli Harrises 84V, 13 Kw cw.
4 Antennas Log periodic 2-30 Mhz 10-50 kw.
I have cable, connectrors, end more.
They take an interest you write me.

I'm posting this for my friends at Alpha...
please respond directly to them:

SAVE! ** ALPHA "SUNSPOT" SALE! ** SAVE!

Long after sunset Saturday night, I switched on
the xcvr & ALPHA. Before you could say "propagation",
two 9n1's, an AP2, and a string of Siberians were
in the log. Signal reports ran to S9+20 just like
old times. Sunspots are back!

Dave AA0RS/G3SZA, Brad K0HM, and I all love DXing,
so ALPHA/POWER is throwing a SUNSPOT SALE to celebrate
long nights with 20 wide open to everywhere all night!

CALL NOW and buy a brand new ALPHA 87A for $5,995, an
'89 for $3,795, or a '91B for $2,695. Standard warranty
and 30 day money-back guarantee, of course. Quantities
are limited, so call Dave, Brad, Barbara, or Scott and
mention that you saw this promotion to save on your new
ALPHA. Sale ends 12/19/97 in any case.

Dick Ehrhorn, W0ID

Visit Alpha's web site at:

>radio, then let's all have fun.

I suspect that if it weren't for no code hams, the U.S. market would have higher prices for VHF & UHF gear, and if it weren't for no code hams, the growth rate might be a negative number for amateur radio in the U.S.A. I also have to laugh as I see folks with "CW forever" apparently tattooed on the forefinger, as I recall that similar sentiments were expressed by hams who wanted spark forever too.

Even with the growth rate that ham radio had recently attracting techs with no code, I can find repeaters that don't have a single user outside rush hour in major metro areas, and others that have one user who kerchunks away for three or so minutes then moves on. Hams don't seem as interested in transmitting as they used to, and even those folks interested enough in becoming hams aren't responding to the siren song of morse code for the most part. Look at the figures for ham upgrades, versus the number of hams entering, and it's obvious that at the present rate of growth and hams dying off or not renewing, most amateurs won't know CW sometime in the next decade if present rates continue.

2224. Very high solar activity - monster X flare

Newsgroup: rec.radio.amateur.misc
Date: 1997-11-06 00:00:00 UTC
From: janalv@robin.no
Message-ID: <MPG.ecbdbfa35fffecf989682@news.robin.no>
Source record: 187402
Cross-posted to: rec.radio.amateur.misc,rec.radio.shortwave

A monster proton X flare was observed at about 1200h UTC today November 6. The current estimated magnitude is X8. The flare is likely to have been associated with a very large coronal mass ejection. Region 8100 is only 3 days away from the west limb of the visible solar disk and CMEs from this position usually don't impact earth. Further details about the event will be added later today and tomorrow at
http://www.dxlc.com/solar/
The flare could cause a polar cap absorbtion (PCA) event resulting in very poor propagation on or near polar and high latitude paths.

>
>Eric KC7YGH
>! @ !

Eric, allow me to paraphrase your ideas: you state that Morse is a higher standard of testing and that people that are for the removal of a code test are for the removal of all tests 'cos they can't pass those either. Then you go on to say that code is the easiest test in amateur radio.

First of all there are many people (class B licensees in the UK) are the same as class A (HF) licensees apart from not having a Morse test pass slip thus your arguement that class B licensees are against a Morse test because they cannont pass any test is *wrong*.

Secondly stating that the morse test is the easiest test of all it purely subjective. I can communicate quite easily in Dutch, English and French are they therefore facile to learn? NO... I might think that Statistical Thermodynamics is quite obvious really, I wonder how you would cope... etc (Note that I don't think that Statistical TD is an easy subject)

I want to learn morse and would use it, but it is important to realise that morse does not confer some sort of technical superiority over others.

The Radia1 Corporation, a major internet service provider,
canceled an internet account which was being used
by KD4CDB and the BARF organization to spread hate
across the internet.
You may view their official statement at this location:
http://www.radia1.com/pms21/

We applaud the Radia1 Corporation for acting responsibly
and recognizing that hateful, vicious, and false attacks on
Jewish citizens will not be tolerated!

Previous to the Radia1 Corporation action, another major
internet service provider, the Bellsouth Corporation, also
canceled an account being used by KD4CDB and the BARF
to spread anti-Jewish hate AND dangerous threats over
the internet. This action can be verified by contacting
abuse@bellsouth.net or you may use dejanews.com
to view the thousands of hateful & threatening messages
posted by KD4CDB over the USENET.

Contrary to statements issued by the BARF, their dangerous
and hateful anti-Jewish organization, has once again been
exposed as the hateful organization that it really is.

Thank you Radia1 and Bellsouth for your responsible
actions!

We also understand that a prominent Jewish attorney in
Atlanta is presenly drafting a legal action which will call
for Mindspring Enterprises of Atlanta to act responsibly
in providing internet services to dangerous hate groups
such as the BARF.

Interesting too that Vince clings to this personal pledge
idea yet I'm sure he views the ARRL survey showing a
majority support code testing as of last March (1997)
as a significant reason to retain code testing.

If that current majority slips to minority status in a future survey
will Vince claim the ARRL should honor this 1989 personal
pledge or will he then consider the collective input of
the ARRL membership surveyed to take precedence.

My concern is that 'if' the code requirement were dropped that the
rest of the exam would remain the same or that it would be lesson
through the same amount of public pressure.

My concern is that the amateur exams don't seem to be set by amateurs.
They seem to be set by those who have little contact with the hobby
hence no really feeling for it's significance.

Sort of like someone who does not have a driver's licence being about
to set the standards for the driver's licence exam.

I am also concerned that the group, or person, that, who, sets the
exam may have been unable to pass in and uses that bias to make it as

simple as possble.

That rca plug simply allows you to meassure the output level. A
friend of mine, years ago, built one and showed me the schematic. If
memory serves me correctly it is simply a diode capacitor combination
across the load resistor.
You can put a voltmeter across the rec connector and use the resultant
dc to help peakup your transmitters output without going on the air.

Hi Vince
Ya know, you just made me very gratefull that I got my licence back in
the mide 60's. Then we had to draw schematics, not block diagrams.
At time progresses, I have the knowledge, or at least know how and
where to get it, to really use amateur radio the way it was intially
intended.
Thanks for reminding me.

Most responsible ISPs have an Acceptable Use Policy. If calling
someone a LID is in violation of it, then you get what you agreed to
in terms of punishment. For example, Ameritech.net has an anti-spam
clause in the user agreement and it goes so far as to cause financial
obligations on the part of the abuser should they violate that clause,
i.e., they fine violators ($1000 per incident I believe.)

In the case of KD4CDB, his Bellsouth account was terminated for
violating their acceptable use policy. He made threatening and
intimidating statements to individuals via e-mail, which is against
their user agreement. I don't believe it had anything to do with
his stance on BARF or any other things that might be construed
as censorship.

Just go ahead and use it and don't even think about the different
impeadance. The only problem will be attaching connectors. A lot of
that stuff won't take solder.

Gary wrote:

I use Rg-6 here for all my g5rv applications-- it works quite well, remember it can't take the power rg-8 would but other than that use it.
also you do have to be creative with the connectors because the sheild is aluminum.

Should not be a problem for HF. I have used 75 ohm feed line several
times. Of corse I also use an older rig that has tube finals and has to
be tuned(gasp). I, personaly, would not use it for vhf but it would
probably be ok. The problem I have is geting connectors to solder to
it. If any one has a sugestion let me know.

> reaction. When he/she doesn't get it, they soon leave.

Fine for private repeaters, where the owner doesn't care. Fine for simplex, too. Better is to monitor (record!) the abuses, and have the person removed from the repeater. It might mean that you have to close the repeater for a while -- though sometimes all it takes is the word from the owner/trustee that they will not permit what the offender is doing.

No statistics or proof, just a feeling that a lot of the abuse is because the abuser does not know any better. Perhaps they speak that way in public or at home and have not yet realized that such garbage is not "on the air material".

For those whose interest is in spouting garbage -- so it is done deliberately -- you suggestion to "shun" the offender is a good one.

Hans Brakob wrote (about autopatches on 2-meter repeaters):

>> There MUST exist a separate control link, other than on 2-meters, if
>> third party traffic is in progress.

Jim Kelley then asked:

>Where did you get that?

I got it from FCC rules part 97, in the following 3-step chain of
requirements.

97.115(b) requires the station to be under control of a
control operator at the station control
point when a third party is involved in communications.

97.213(a) allows the control point to be remote, and
further allows the control link to be via radio. If you
choose radio control, it specifies that radio contol
must be via an auxiliary station.

97.201(b) prohits auxiliary stations on 2 meters.

Since the input channel of a 2-meter repeater is on 2 meters,
ipso jure it is NOT an auxiliary station and cannot act as
the control link.

It's really a very simple and uncomplicated set of instructions.

Since it is clear we do not agree and I will not change my stance
without an official statement from FCC, I respectfully submit the
above as my last offering on this matter. I am confident that my
method is legal and that yours is not.

>The 20 WPM CW ID limit is clearly still in force, but is met with
>considerable disregard by repeater operators.

Disregarding a rule does not invalidate the rule, it simply makes
you a rule breaker.

Just by coincidence, my only citation from the FCC in all my
years as a ham is a speeding ticket for 24WPM on my repeaters IDer.

Blackadder: Right, Baldrick, let's try again, shall we? This is called
adding. If I have two beans, and then I add two beans, what
~~~

do I have?

Baldrick: Some beans.

BA: Yes...and no. Let's try again, shall we? I have two
beans, then I add two more beans. What does that make.

B: A very small casserole.

BA: Baldrick, the ape creatures of the Indus have mastered this.
Now try again. One, two, three, four. So how many are
there?

B: Three.

BA: What?

B: And that one.

BA: Three...and that one. So if I add that one to the three,
what will I have?

B: Some beans.

BA: Yes. To you, Baldrick, the Renaissance was something that
just happened to other people, wasn't it?

I for one ended up with a 1000' spool of RG6 really cheap. I think the "standard" way of doing a connector for it would be to do a crimp-on F connector. They are readily available as RG6 is still a major standard in the world of Cable TV. You can get adapters from F to other common types of connectors (SO239, etc.) An alternative might be to use a PL259 with the UG(75?) reducer/adapter commonly used with RG8X. I think the OD on 8X and RG6 are about the same, and mechanically it should work.

>
>Get it together, pal.

You're a one song act Vince. Every thread with you eventually
degenerates into the declaration: "you don't understand, you
have no credibility, so get it together, pal".

P.S. If you're so annoyed with the credibility of ARRL
pledges why do you display your "Life Member" status in some
of your posts instead of resigning?

2265. Is KV4FZ Jewish?

Newsgroup: rec.radio.amateur.misc
Date: 1997-11-07 00:00:00 UTC
From: aci6@aol.com
Message-ID: <19971107192500.OAA03748@ladder02.news.aol.com>
Source record: 187230

No doubt many of you have seen the posts by kkzz@truth.org, simons@watch.net and eric67@uwww.edu concerning BARF, KV4FZ, the 20 meter "service" nets and anti-semitism.

It seems that the supporters of KV4FZ (namely BARF) have been accused of being anti-semitic by some or all of kkzz, simons and truth.

Since KV4FZ is Herbert L. Schoenbohm, my question is:

Is KV4FZ jewish? If so, what's with the anti-semitism accusations?????

PS, I saw the picture of a guy with the German flag. But, is that it?

And, in another post, someone said KV4FZ was losing his ham license for 'interferring with the "service" nets for years'. It is my understanding that the FCC has issued a notice that his license will not be renewed due to a conviction on some charge related to long distance telephone issues and not because of any ham related violations. And that this conviction (two others were overturned)
is being appealed.

I am, in general, a disinterested observer. I had never heard of any of this until this week. But, there is an awful lot of smoke here and I would like to see both sides presented LOGICALLY and HONESTLY. I have heard the KV4FZ side and if it is accurate, something is wrong here, very wrong. What about the other side of the story?

Bill

From: laser@lance.netdoor.com
Message-ID: <63vrsg$4sk$1@axe.netdoor.com>
Source record: 187233

me and my buddy just bought some portable 2-way radios from radio shack, the $75 family UHF range models.. they only get about a mile to a mile and a half range though.. we're completely radio ignorant.. is there any way we can boost the power of these things to get more range out of them? or are there other radio options that have a farther range? our local "we have answers" Radio Shack guy said nothing legal could go over two miles.. what are our options for further range? other radios? auto radios?

help!

thanx!

-Pat

I'm happy with my Radio Shack HTX202.

Actually, I thinking of selling it (and getting a dual
band HT): $90.

I was wondering if there is any I-net sites where I can look up info on upgrading the Rx abilities on HT's. I know that many of them require only a key sequence to do this. The guy at the local radio store says he'll do it for $60...but that's a lot of money just to type in the correct sequence of keys.

If anyone can help me find such documentation, please let me know!

As I not a code person, I did learn the code good enough to pass the 5 wpm. Now, What i dont see is why do I need to pass a 13 word per minute code test to go to general. I can take radio apart, repair them, build one that works, but because I can't do 13 wpm I am limited. Oh yes I can go to the doctor and do it the other way. I can pass the exams all the way to extra. But that CODE of 13 wpm.

I am not for doing completely away with the code, just do away with the other speeds of it.

Regulation here in the US (code testing, unnecessary/artificial barriers
to experimentation and implementation of modern techniques like SS,
ridiculously
antiquated "occupied bandwidth" and baud rate limits, etc.) and the backward
attitudes of many incumbents are our major problems. All of this is
exacerbated
by the groups such as the ARRL and FISTS, who insist on maintaining the status
quo (or going retrograde) at all costs.

LITTLE LEOS NOT FARING WELL AT WRC-97

WRC-97 is nearing its halfway point with some issues moving toward settlement and others still very contentious. Here's a look at the issues important to Amateur Radio:

Little LEO (non-voice, non-geostationary mobile satellite) interests have had a difficult time at WRC-97. While nothing is firm, the conference appears to be moving toward agreement that the segments 146 to 148, 170 to 230, and 406.1 to 430 MHz are not open for consideration for Little LEO allocations at this time. There has been little support outside Region 2 for any new Little LEO allocations. Most of the Little LEOs' interest has focused on 401 to 406 and 450 to 470 MHz, with some possibility of future

studies of possible compatibility with broadcasting at 470 to 862 MHz.

Thursday night, a compromise proposal from The Netherlands for a secondary allocation at 432 to 438 MHz for the Earth Exploration Satellite Service failed to gain sufficient support for adoption. Instead, it appears that a resolution will be proposed calling on the ITU-R to conduct urgent studies of the best band for such a satellite to operate in. For the satellite to perform its intended function of studying the rain forest, the frequency chosen must be in the general vicinity of 400 to 500 MHz. This makes the selection of an operating frequency that will not interfere with other services very difficult, because this spectrum is heavily used by a variety of services all over the world.

Earlier, it was agreed that the Earth Exploration Satellite Service would be upgraded at 1215 to 1300 MHz from a secondary to a primary allocation. At this order of frequency, the service has less potential for interference to the Amateur Service, and its presence reduces the possibility that other, less-compatible services might later be introduced into this band.

Wind profiler radar issues appear to be close to resolution, with amateur satellite segments protected from being mentioned as appropriate for wind profiler operations. What has been agreed at working group level is that--except for a worldwide primary allocation at 1270 to 1295 MHz--the only specific allocations for wind profiler radars are in Region 1, and those are on a secondary basis. For Region 2 amateurs the significant points are that administrations are urged to implement wind profilers in radiolocation bands at 440 to 450 MHz, 904 to 928 in Region 2 only (protecting the lower, weak-signal segment), 1270 to 1295 MHz (protecting amateur satellite and weak-signal), and 1300 to 1375 MHz. The bands 420 to 435 MHz or 438 to 440 MHz "could be considered for use . . .in case compatibility between wind profiler radars and other radio applications operating in the band 440-450 MHz or 470-494 MHz (only in some Region 1 countries) cannot be achieved." The amateur-satellite segment is protected.

Another amateur delegate on a national delegation has arrived. Oyekunle B. Ajayi, 5N0OBA, of the Nigerian Amateur Radio Society is on the Nigerian delegation and is taking an active part in the conference. The IARU reception was held Thursday night and was quite successful, attracting among, others ITU Secretary-General Tarjanne.

4U1ITU has been active using the special call sign 4U1WRC. Even 10 meters has been open to the US. Unfortunately, with meetings lasting well into the night, the many delegates who hold amateur licenses have little time to operate.

FCC SETS RF SAFETY EVALUATION THRESHOLD FOR REPEATERS

The FCC has released an erratum to its RF safety rules that sets 500 W ERP (effective radiated power) as the limit for most amateur repeaters before a routine RF safety evaluation would be required. This applies to repeater systems on all bands.

A routine RF safety evaluation would be required for all repeater systems with more than 500 W ERP and having either (1) a building-mounted antenna or (2) a non-building-mounted antenna with a height of less than 10 meters (approximately 33 feet) above ground level to lowest point of the antenna.

It's fairly simple to calculate ERP. Take the PEP input to the antenna and multiply it by the numerical equivalent of the antenna gain in dBd (dB relative to a halfwave dipole in free space). Gain relative to an isotropic radiator (a point source), dBi, can be converted to dBd by subtracting 2.15 dB from the dBi number. For example, say your repeater puts out 100 W and has 3 dB of feedline loss. Calculate: 100 x 0.5 = 50 W to the antenna. The antenna has 8.8 dBd of gain, or 9.44 as a decimal. So the ERP is 50 x 9.44 = 472 W.

For details, see "Second Erratum" (October 22, 1997) at http://www.fcc.gov/oet/dockets/et93-62/.

WORKING MODEL SPUTNIK IS ON THE AIR!

Reports from several places indicate the working model Sputnik PS2 satellite launched Monday, November 3, from the Russian Mir space station is beeping away on 145.82 MHz. The one-third scale Sputnik model was built by students in Russia and France to commemorate the 40th anniversary of the original Sputnik 1 satellite. Sputnik 1, launched by the Soviet Union in 1957, was the first artificial Earth satellite. The original Sputnik 1 transmitted a beacon on approximately 20 MHz.

The Sputnik model was launched by hand from Mir during a space walk by Cosmonauts Pavel Vinogradov and Anatoly Solovyev, who turned on the transmitter and checked out reception aboard Mir before launch with help from US astronaut David Wolf, KC5VPF. The beacon is audible in either FM or SSB mode. The beacon transmitter runs approximately 250 mW. The 500 mm antennas are circularly polarized.

Among those reporting reception of the beacon was Ralph Wallio, W0RPK, near Des Moines, Iowa. He reports monitoring the Sputnik PS2 on November 3 from 1228 to 1238 UTC. He says the frequency was approximately 145.827 MHz at acquisition of signal (AOS) to 145.819 at loss of signal.

Mario Cajar, N1NYJ, of New Britain, Connecticut, also heard the Sputnik on November 4 at approximately 145.82 MHz. Both he and Wallio indicated that the Sputnik is following approximately the same orbit as Mir. Cajar reports he heard the beacon signal very well during a seven-minute pass using a 2-meter hand-held transceiver and a scanner antenna.

Ray Soifer, W2RS, in Glen Rock, New Jersey, said he heard the Sputnik model "loud and clear" on November 3. "It was 20 dB over S9 on my main station receiver, but also full quieting at times on a hand-held with a rubber duck," he said in an Internet posting to the SAREX group. "Congratulations to one and all."

Bob Gonsett, W6VR, reports hearing the mini-Sputnik from his QTH near San Diego on November 4. He reports a "fairly weak signal" on the near-horizon pass and "no QRM of any kind on 145.82 MHz during several hours of

monitoring."

Trevor Smith in Melbourne, Australia, also heard the mini-Sputnik this week with a good signal.

On Reunion Island, a great cheer went up as hams, students, and teachers gathered to listen to the Sputnik model as it passed overhead on its initial orbit and heard the beacon signal from space for the first time. Students from the FR5KJ radio club at Jules Reydellet College in St Denis, Reunion Island, and at the Polytechnic Laboratory of Nalchik Kabardine in Russia cooperated in building the mini-Sputnik. The Russian students built the satellite body, while the French students fabricated the transmitter inside. Two working models of the Sputnik were assembled and transported to Mir, but only one was launched.

Reception reports go to FR5KJ, the club station at College Reydellet, 103 rue de la Republique, 97489 Saint Denis Cedex, Reunion Island. Miles Mann, WF1F, says reception reports also may be sent to Sergei Sambourov, PO Box 73, Kaliningrad-10 City, Moscow Area, 14070, Russia. Include an SASE and one IRC for a certificate.

Gerard Auvray, F6FAO, requests that those receiving the mini-Sputnik not forward .wav files as the project team has no time to analyze them. He requests reports include date, UTC and local time, frequency, and, optionally, the temperature (as determined from the conversion table--see below).

The frequency of the beacon indicates the satellite's internal temperature. The scale runs from 1361 Hz at 50 degrees C to 541 Hz at -40 degrees C. Auvray says the temperature has been relatively stable at between 27 and 32 degrees C for the past few days. Here's the scale:

Degs (C) Freq (Hz)
50 1361
30 1290
25 1261
10 1208
0 1131
-10 1040
-20 891
-30 724
-40 541

FCC INITIATES UNIVERSAL LICENSING SYSTEM

As a first step in implementing its new Universal Licensing System (ULS), the FCC's Wireless Telecommunications Bureau is attempting to "populate" the ULS by getting licensees to register. Ultimately, the ULS will give hams and other licensees on-line access to make license updates and renewals, eliminating the need for hardcopy forms like the venerable Form 610. An FCC Public Notice this week said the ULS is aimed at combining the 11 different licensing systems the Bureau now uses--including Amateur Radio--into a single system.

ULS registration requires supplying a Taxpayer Identification Number (for individuals, this is typically your Social Security Number) and "associated call signs." These could include your individual call sign plus any club station call signs for which you are the trustee.

The Public Notice said that in conjunction with the ULS, the FCC "must collect TIN information to correlate its licensees with any outstanding Federal debt that they might have incurred in other dealings with the Federal Government." All vanity call sign applicants must now supply a TIN as part of Form 159.

On-line registration via the Internet is available. In addition to providing basic name and address information, registration requires you to establish a password that you must use along with your TIN to re-enter the system to make future changes. The ULS also lets you check the status of a pending application. A spokesperson in the FCC's Technical Support Group said the FCC will verify all data supplied at the time of registration to ensure that it is valid before the data are entered into the FCC licensee database.

Using the TIN and the associated call sign(s), the ULS assigns a unique sequential number to each licensee. The WTB says that once it has registration information and has implemented the ULS, it will streamline and simplify the FCC's ability to handle future administrative changes (name and address changes, for example).

Licensees are invited to register electronically at http://www.fcc.gov/wtb/uls. Select ULS Registration. Licensees without access to the Internet may file a TIN registration form, FCC Form 60, from the FCC's fax-on-demand service at 202-418-0177 or by calling the FCC Forms Distribution Center, 800-418-3676.--FCC

ARIANE 502 NOT A TOTAL SUCCESS

While the European Space Agency's "new-generation" Ariane 5 rocket launch launched successfully October 30, the mission was not the unqualified success early reports had suggested. Subsequent flight analysis indicates the Ariane 5's second-stage engine may have shut down early, causing the payloads to go into lower than expected orbits. The Amateur Radio Phase 3D satellite had been on the Ariane 502 manifest until August, when it became clear that Phase 3D would not be able to meet new flight vibration and stress requirements in time.

The payloads aboard the Ariane 502 consisted of a pair of instrumented masses designed to simulate large communication satellites, plus the Teamsat technology satellite. Data collected during the flight indicate that the liquid-fueled core vehicle of the Ariane 5 rocket rolled in flight causing its main engine to shut down 10 to 20 seconds too soon. This meant that the upper stage booster and attached payloads did not attain the velocity they needed and went into a lower orbit than expected.

ESA officials are being quoted as saying that if actual communications satellites had been aboard, they might have been able to compensate for the lower orbit insertion by using onboard propulsion systems. However, this also could reduce the satellite's overall useful life.

It is unclear what effect, if any, the lower orbit will have on Teamsat--or might have had for Phase 3D.

In addition, ESA said that the liquid-fuel core vehicle fell to Earth 5000 miles from its projected impact site in the Pacific Ocean. As a result, aircraft scheduled to witness the reentry didn't reach the area in time.

AMSAT-DL (Germany) President and Phase 3D Project Leader Karl Meinzer, DJ4ZC, expressed confidence that the cause of this problem will be corrected prior to the Ariane 503 test flight.

Ariane 502 was the second Ariane 5 test flight after the failure of the maiden flight in June of 1996. The third qualification flight is set for next spring.--AMSAT News Service

NEW FCC CHAIRMAN, MEMBERS CONFIRMED

William Kennard is the new chairman of the FCC. Kennard, formerly the FCC's General Counsel, won confirmation October 28 on a 99-1 Senate vote. The vote followed expressions of dissatisfaction from several senators with the way the FCC has been implementing the Telecommunications Act of 1996. Kennard this week named John Nakahata as his chief of staff.

Confirmed on voice votes were FCC nominees Harold Furchtgott-Roth, Michael Powell, and Gloria Tristani.

Outgoing FCC Chairman Reed Hundt this week congratulated the four newly confirmed commissioners. All four new FCC members were scheduled to be sworn in November 3. Commissioner Susan Ness is the lone holdover from the Hundt FCC.

FCC SEQUENTIAL CALL SIGN UPDATE (View with nonproportional font)

The following is a list of FCC sequentially assigned call signs issued as of November 3, 1997. Note that the last available Group C (1x3) call sign, N3ZZZ, has been issued in District 3. Group D (2x3) call signs now will be issued to Tech Plus, Technician, General, and Novice licensees in District 3. The FCC has almost exhausted its supply of Group C call signs in District 1.

District Group A Group B Group C Group D

SOLAR UPDATE: A STRONG UPWARD TREND; MAJOR FLARES

Solar oracle Tad Cook, K7VVV, Seattle, Washington, reports: Solar Cycle 23 showed renewed activity this week, as solar flux values went well over 100. Average solar flux for the week was up about 19 points, and average daily sunspot numbers were up about 36 points. The average solar flux for the previous 90 days went up two points from 87 to 89 over the week, and daily values were above this average on every day, indicating a strong upward trend. Flux values are measured three times per day at an observatory in Penticton, British Columbia. The one reported here is the noon measurement at 2000 UTC, but the highest flux measured for the week was actually 120.6 at 2200 UTC on November 4.

As solar activity was rising, geomagnetic conditions were very quiet, especially on November 2 and 3, when K indices were at one or zero most of the time. This meant that absorption of radio waves in the upper latitudes and over polar paths was minimized, and conditions on higher HF bands improved. These conditions did not last, and as this bulletin is being written on Thursday evening, the K index is six, and a major geomagnetic storm is raging. This is from a major flare that burst from the solar surface at 0558 UTC on Tuesday. Protons from this flare are slow moving, so it takes a couple of days to affect Earth. There was another major flare on Thursday morning at 1155 UTC, so poor conditions may continue, although at this point it is uncertain if the new flare will hit Earth directly with protons or not.

In last week's bulletin, it was mentioned that active geomagnetic conditions created havoc in the recent CQ Worldwide DX Contest. Actually that was mostly true from a West Coast contester's perspective, since contest stations in that region use a polar path to reach Europe. The East Coast was not affected nearly as much, since that path to Europe is further to the east. It is mainly high latitude paths which are bothered during periods of geomagnetic activity.

For the short term, expect poor conditions until effects from these solar flares pass. If we are not affected by the latter flare, conditions may be back to normal by the middle of next week. Solar flux is expected to drop below 100 by November 11, below 90 two days later, and to the mid-80s after the middle of the month. It should rise above 90 again around November 23, and above right after Thanksgiving. Periods of unsettled to active geomagnetic conditions are forecast around November 20-23, a recurrence of the conditions during the recent DX contest.

For updates on the storm, check WWV at 18 minutes after the hour, or call 303-497-3235. Conditions should be back toward normal when the K index is three or less, although the ionosphere may take some time to recover. Some good sites on the web to check for alerts and information are Cary Oler's Solar Terrestrial Dispatch page at http://holly.cc.uleth.ca/solar/ or NOAA's Space Environment Center at http://solar.sec.noaa.gov.

Sunspot numbers for October 30 through November 5 were 51, 55, 62, 74, 66, 68 and 51 with a mean of 61. The 10.7 cm flux was 88.2, 90.5, 93, 97.8, 109.8, 117.9 and 113.8, with a mean of 101.6, and estimated planetary A indices were 10, 4, 8, 3, 3, 9, and 9, with a mean of 6.6.

FORMER EPA SCM WILLIAM G. "GERRY" MATHIS, W3GM, SK

Former Eastern Pennsylvania Section Communications Manager Gerry Mathis, W3GM, of Pennsburg, Pennsylvania, has died. He was 86. Atlantic Division Director Kay Craigie, WT3P, reports Mathis passed away in late October. As W3BES, the call sign he earned in 1930, Mathis was ARRL SCM for Eastern Pennsylvania from the late 1930s until 1951.

When the Ohio River flooded in 1937 and a detachment of Philadelphia police was sent to Louisville to help, W3BES acted as a relay station to keep Philadelphia in touch with Louisville. Some of his transmissions were broadcast over local radio station WFIL to keep the public informed about the disaster.

Mathis' professional life also revolved around electronics and radio. He was employed by a number of different radio-related companies. Many hams remember him from Consolidated Radio, where he built custom transmitters for various prominent Amateurs.

During World War II, he was active in the War Emergency Radio Services (WERS) and then went to the First Fighter Command to organize the air-to-ground communication.

He was a member of the Frankford Radio Club and constructed a multi-multi contest station where he trained many club members in the art of contesting. He also was a long-time ARRL member.

Upon hearing of Mathis' passing, Dave Pascoe, KM3T, said, "Gerry was a real gentleman and spent so many hours bringing new contesters into the hobby. His knowledge of radio and knack for "getting things working" were amazing. He was a true giver to the Amateur Radio community."

In 1991, the ARRL Atlantic Division honored Gerry Mathis with the Grand Ole Ham award. This award recognizes outstanding hams for a lifetime of service to others.--thanks to Kay Craigie, WT3P

IN BRIEF:

* This weekend on the radio: The Worked All Europe Contest (RTTY) tops the list of operating events. See August QST, page 95, for details. Also on tap: The Japan International DX Contest (SSB), the OK/OM DX Contest, and the

Peace Country Amateur Radio Club ARS Contest (CW). See November QST, page 94, for more information.

* ARRL/VEC test fee to rise: The ARRL/VEC test fee will be $6.35 in 1998--up from $6.25 in 1997. The announcement follows this week's FCC Public Notice announcing a 2.2% increase in the maximum fee reimbursement, to $6.39. Volunteer Examiners (VEs) and Volunteer Examiner coordinators (VECs) may charge examinees for out-of-pocket expenses incurred in preparing, processing, administering, or coordinating examinations for amateur operator licenses. The amount of any such reimbursement fee from any one examinee for any one examination session, regardless of the number of elements administered, must not exceed the maximum allowable fee.--Bart Jahnke, W9JJ/FCC

* Vanity update: The FCC in Gettysburg, Pennsylvania, reports it received 598 vanity call sign applications during the month of October, 435 electronic and 163 paper.

* Radioville on the Radio: The Porter County Amateur Radio Club in Valparaiso, Indiana, generated some publicity for the hobby October 4 during its third annual special event operation from Radioville, a small town in Northwest Indiana. The club set up K9PC in an open field across the street from a busy state park and had two stations operating for about five hours. "We set up in a small, open field, next to a small restaurant that serves 'RF burgers' in our honor that day," the club says on its Web site. Several newspapers turned out to chronicle the event. A local TV station later presented a show on Amateur Radio and incorporated the footage into the show. The annual event was begun by club member August Flassig, W9HXO, and has grown each year. This year, K9PC offers a certificate to all stations that send in a QSL and a sase. QSL to PCARC, PO Box 1782, Valparaiso, IN. 46384. The club will send you a full-color certificate. For more information and some photos, see http://ww2.netnitco.net/users/w9dn.--Dave Nicolaus, W9DN

* Ham hurt in hamfest explosion: Jose Martinez, WA4VUZ, of Pembroke, Florida, was seriously injured when his motor home exploded during the Palm Beach County Hamfest the weekend of October 18-19 in West Palm Beach. According to a report in the October 20 edition of the Sun Sentinel newspaper, the explosion was caused by a leaky propane gas tank. "Known for their prowess in helping victims of hurricanes and other natural disasters that destroy routine communications, Martinez's fellow radio enthusiasts rushed to confront a major emergency of their own," the report by staff writer Tim Collie said. Martinez reportedly suffered burns. He was helicoptered to a hospital in the wake of the early-morning blast and was reported in satisfactory condition. Another man also was injured. The newspaper said that hams at the gathering took up a collection for Martinez, a regular at the Palm Beach County Hamfest.--thanks to Mort Eisenberg, K3DG

* Greenland on the air: From November 3 until December 1, OZ8AE will be QRV on CW from Groennedal in the Southwestern part of Greenland operating as OX/OZ8AE. QSL direct or via the bureau. OZ8AE will join OX3FV during the CQ WW CW Contest.--OZ8AE

* RSGB VHF/UHF Handbook available: The RSGB's VHF/UHF Handbook, edited by Dick Biddulph, G8DPS, now is available from the ARRL. This 317-page book is the successor to the VHF/UHF Manual. It covers a broad array of topics for beginners and experts alike and includes information on specialized modes such as data and TV. The VHF/UHF Handbook is ARRL Order No. 6559. It's $35 plus $6 for UPS shipping. Call toll free, 888-277-5289, or visit the ARRLWeb site at http://www.arrl.org/catalog.--RSGB

* Lewis and Clark and CW: Missy Hollenbeck, AA0OF, writes HQ to share some good news. "PBS contacted me to write for their project, Lewis and Clark: A Journey of the Corps of Discovery. They needed a teacher who could write language arts lessons plans that could be downloaded off the PBS online Web site following the Lewis and Clark special" that aired on PBS November 4 and 5. She says her job was to incorporate "as much technology as possible" into the lessons, and, naturally, she included ham radio. One activity is "If Lewis and Clark had only known Morse Code." The material includes links ARRL for more information regarding amateur radio activities in the classroom. The lessons can be found at http://www.pbs.org/lewisandclark/class/idx_les.html

* Pacific Division 1997 Hams of the Year: Doug Hendricks, KI6DS, and Jim Cates, WA6GER, were named Pacific Division Hams of the Year for 1997 at Pacificon '97. Jim and Doug are the cofounders of the Northern California QRP Club (NorCal). Both thought that the club would attract only a handful of radio amateurs in the Northern California area when they formed it in 1993. Due to their leadership and team efforts the NorCal club now has more than 2500 members in all 50 states and some 60 countries and continues to grow. Congratulations, Doug and Jim!--ARRL Pacific Division Update

* I wanna be elected! Jeff Reinhardt, AA6JR, PIC Santa Barbara Section and member of the League's national Public Relations Committee was elected to the Agoura Hills, California, City Council in the general election held on November 4. Fred Fowler, KE6EPM, won election to a seat on the Sunnyvale, California, City Council. Congratulations, Jeff and Fred (and any other hams who were successful at attaining elective office this past week)!

==========

The ARRL Letter is published by the American Radio Relay League, 225 Main St, Newington, CT 06111; tel 860-594-0200; fax 860-594-0259. Rodney J. Stafford, KB6ZV, President; David Sumner, K1ZZ, Executive Vice President.

Circulation, Kathy Capodicasa, N1GZO, e-mail kcapodicasa@arrl.org.
Editorial, Rick Lindquist, N1RL, e-mail elindquist@arrl.org.

Visit the ARRLWeb page at http://www.arrl.org.

The purpose of The ARRL Letter is to provide the essential news of interest to active, organizationally minded radio amateurs faster than it can be disseminated by our official journal, QST. We strive to be fast, accurate and readable in our reporting.

Material from The ARRL Letter may be reproduced in whole or in part, in any form, including photoreproduction and electronic databanks, provided that credit is given to The ARRL Letter and The American Radio Relay League.

How to Get The ARRL Letter:

The ARRL Letter is distributed directly from ARRL HQ only to elected League officials and certain ARRL appointees and to paid subscribers of the now-defunct hard-copy edition of The ARRL Letter. For members and nonmembers alike, The ARRL Letter is available free of charge from these sources:

* The ARRLWeb page (http://www.arrl.org/arrlletter/). This version of The ARRL Letter includes any photographs. (NOTE: The ARRL Letter will be posted as soon as possible after publication. Please be patient.)

* The HIRAM BBS: 860-594-0306. (NOTE: The ARRL Letter should be available via the HIRAM BBS no later than the Monday after the date of publication.)

* The ARRL Technical Information Server (InfoServer): Send an e-mail message to info@arrl.org. The subject line should be blank. In the message body, type "send ltrmmdd.txt", where mm represents two digits for the month and dd represents two digits for the day (The ARRL Letter is published every Friday). For example, to request The ARRL Letter file for Friday, January 3, 1997, you'd type "send ltr0103.txt". Then, on a separate line, type "quit". (NOTE: The ARRL Letter should be available via the InfoServer no later than the Monday after the date of publication.)

* The Netcom server, run by the Boston Amateur Radio Club and Mike Ardai, N1IST: Send e-mail to listserv@netcom.com (no subject needed). The body of the message should say "subscribe letter-list".

* CompuServe and America Online subscribers, as a downloadable text file in the services' ham radio libraries.

I have seen the BARF website and am not familiar with the background of the story you outline, or your organization. Many of the posts regarding BARF allude to it being a hate group, some specify that hate as anti-semitic; apparantly the ham(s) on the 'other side of your fence' are Jewish. Having little information on which to base an educated opinion of BARF, I will ask the following question publicly on this newsgroup and watch this thread for your answer.

"Does BARF promote in any way the hatred of any group of people based on their racial, religious or national heritage?"

This is not some sort of a trick question, I am truly curious.

Thanks,
Howard

The long standing qualifications for the HF bands is to pass both code
and theory exams. Unless you have done that, you are not qualified.
Plain and simple.

The catagory of "otherwise qualified individuals" simply does not exist.
This is typical Public school logic. Instead of putting forth the effort
necessary to properly educate, they simply lower the standards so nobody
gets their feeling hurt or has to put forth any effort.

Finally someone who gets it! I have been getting all sorts of weirdos who think I am a real Doctor, and no one seems to remember the suspicious Dr. Bellows. I seem to forgot his first name, and Nick at Nite stopped showing the series. Do you remember what it was?

Is there a message hidden in all this garbage somewhere? Is the above
post in morse code or something? All I see are dashes, dots, and other
weird characters.

>get with it?", shortly followed by "And don't you need morse to get
>a license?".

That's typical in the US as well. The public isn't well informed about
amateur radio. They are interested in how far you can talk. And they
think passing a Morse test is still required. When you tell them it isn't
a CB but rather an amateur transceiver, they ask the next question.
When you tell them the real simplex range of a VHF+ radio, they
lose enthusiasm. And when you tell them that indeed the Morse test
is still required to operate on bands with worldwide range, they lose
even more enthusiasm.

This is where you have to be aggressive in pointing out all of the
things other than Dxing which amateur radio offers. Sometimes
you can bring them around with that if they haven't already tuned
out. Often you can't.

>This isn't an argument that the code test should be removed. Even if
>it was scrapped tomorrow, the general public wouldn't realise this and
>still would think of amateur radio as involving decoding bleeps. If
>however many years of having a class B (no code) license has not got
>the message out that you _don't_ need morse, then I sincerely doubt
>that the actual removal of the necessity for HF access would make much
>difference to the numbers entering the hobby.

The one spills over onto the other. The public generally has incomplete
information about amateur radio, so it is natural for them to confuse one
facet of it with another. There is a sort of a guilt by association which
the code test free license suffers because the other classes still have the
Morse requirement, and the association between Morse and amateur
radio is very prominently fixed in the public mind thanks to the many
years when the two were inseparable.

A much more aggressive PR campaign could erase some of that. Eliminating
the Morse tests altogether would make such a campaign easier. That in itself

isn't a sufficient reason to strike Morse testing, but when coupled with the fact that Morse speed testing serves no real legitimate licensing purpose anyway, it does make the case a bit more compelling.

But of course that's what a Morse test is, just a test of Pavlovian
conditioning. It is totally rote, no intelligence required. Of course
half the population is of below average intelligence, so I guess that
they need something at which they can excel.

Gee Burt,
I used to think you were obnoxious, but after reading 1000's of no-code articles (even cross posted into the scanner group) by the likes of Carl (No-Code) Stevenson and Len (NO_CW_TEST) Anderson You seem downright civilized !!!!

Your put-downs of ham radio and it's participants will seem like reading Shakespeare compared to Carl and Len's crying/whining.

So welcome back and let the put-downs begin !!! I'd suspect you might even start off with me ??? Who knows ??? Most anything (even an insult) is better than the no-code whiners.

Cheers !!!!

Hamster

A major announcement will probably be made later this
weekend concerning the BARF hate organization.
Truth investigators are just now returning from their far flung
missions of truth gathering.
Their findings will be reviewed by our legal experts and, if
cleared, will be shared with all those seeking the truth about
this dangerous organization.
BARF's totally false statements will be truly put to rest.

"Truth will always live in the hearts & minds of those men &
women who are willing to stand up and defend it." H.D.J.

John,
Why do you need an atu?
You'll just be heating up the components in the atu, you will not be putting any more power actually into the antenna.
And anyway, the G5RV antenna is highly overated.
What do you want from your radio that you can't get from a good vertical or a compact 3 or 4 ele yagi?

Actually... by using the ham radio... you can avoid local call access
charges.

In Japan, the local calls are not free so the use of ham radio is a
great way to avoid unnecessary tel charges.

That's why amateur radio is so popular in Japan.

I think local calls in north america shall not be free... many
people abuse the system (not to hang up etc... by using the internet
or a long friendly conversation) and it will invite the interest in
amateur radio by doing this.

Nothing ... except better theory tests and other written elements.
Relevant technical knowledge and knowledge of the rules/regulations
are all that are justifiable for licensing in today's world.

and
>
>
> (b) what would you like the overall exam to be like?

Something that would weed out the beeping lids who don't know
the first damned thing about radio and don't care to.

>fact that it was returned to a 'listenable' or usable form would seem
>clear. Not that I actually give a damn whether someone had a bootleg
>recording, but the topic was interesting :)

First, I stated in my hypothetical, "my own music" at least implying that
I had writted the music, and held the copyright still. Therefore, I assume
that I would be consenting to the transmission if I sent it myself. The
fact that no one else would buy the material might make protecting the
copyright a moot point, but I wouldn't be violating copyright law.

Your question of sending copyrighted material without permission of the
copyright holder though would be a violation of the law, since that would
be a violation of the copyright, and by definition also a violation of
Part 97 if amateur frequencies were used, it would be a violation of law.
I also have to wonder how though I could be sued for sending something
that I held the copyright on, or who would be silly enough to try it.
Even ASCAP & BMI at the worst of their reputation aren't likely to try
that.

There is no justification in demanding arbitrary "work" to "earn"

> People aren't as likely to shit all over something that they've worked
> hard for,

The idea of the code test as a "lid filter" is absurd, since the facts show
that it is not effective in that role. I would bet that, if a real statistical
study were done, that it would be found that code testing has kept out far more
good people than lids.

> Whether or
> not CW is commonly used, it is a rite of entry to the HF frequencies,

"Rites of entry" and other fraternity hazing rituals have no place in
federal regulations that restrict otherwise qualified individuals from
participating in activities or using public resources. This is just as
arbitrary and unjustifiable as saying "Only those who can dunk a basketball
are permitted to enter and use our national parks." or "Only those who are
willing to learn and prove skill in braille are permitted access to our public
libraries."

> and as
> such should be maintained even if for nothing else than tradition...

As I have said before, I'm firmly of the belief that "tradition" is the
last resort excuse to be invoked when no logical, rational reason remains to
maintain the status quo.

If you were stupid enough to trust politicians (which is all the
ARRL "leadership" are when the rubber meets the road), you deserve
whatever you get.

Unlike "go whichever way the wind blows" (or sucks, I guess, depending
on your perspective :-), I keep my word. When I pledge not to seek or
support a ban on the use of Morse, or a reduction in the spectrum where
its use is permissible, I mean it. Period.

Unlike you, Vince, I speak the truth and only talk out of one side of
my mouth.

Actually, HF is still frequently used, but usually SSB, sometimes RTTY
or other digital modes.

> Its
> not reasonable to expect people to operate CW on 2 meters,

Gee Mike, why not? Since 6m and 2m have the ONLY "CW only" sub-bands
in US regulations. What do you have against CW on VHF??? (admittedly
playing the devil's advocate here, just to show the Mike's bias is
mostly towards keeping people off of HF)

> Furthermore, 90+% of the "unsociable" behaviour on the HF bands occurs in
> the SSB spectrum. Why is it I rarely, if ever, hear the same type of
> behaviour on CW subbands? Could it be that CW operators are, generically,
> more polite than their SSB counterparts?

Could it just be that it takes so damned long an is so inconvenient
to actually say anything but Q-signals and "PSE QSL" that few bother?
However, there are obviously a fair number of CW ops who swoosh carriers
up and down the bands, send strings of dits on top of other QSOs, and
deliberately try to jam digital communications because they are in
"their CW bands" (if they only knew how ineffective their feeble efforts
are it would be funny)

> There are many aspects to the testing process which are irrelevant for
> communication on HF. Why test me on VEC regulations in the Extra test when

> chunks?

Because extras are relied on to be the "leaders" of the VE force???

> There are logical and compelling reasons to eliminate the code test, yes.
> However, there are also logical and compelling reasons to maintain a code
> test. Neither side of this issue is no longer willing to acknowledge this,
> and work for a compromise.

Whenever compromises are offered, such as Yin's proposal of a few weeks ago,
many of us no-code-test folks said we would support it, even though it still
required a 5 wpm test for HF access ... that's clearly a compromise, since
I would by far prefer to see NO Morse testing at all ... but that compromise

was rejected with a lot of "5 is no-code, not know-code" crap and accusations
of laziness, etc.

When it comes to compromise, the pro-code side seems unwilling to budge in
the least bit ... the no-code side has repeatedly fielded compromise proposals.

> In many respects, the pro-code folks feel they
> have already compromised with the creation of the codeless VHF license,
[blah, blah, blah]

> I believe, and do others, that more is wrong with amateur radio than just
> eliminating the code test will fix.

In that we definitely agree, Mike ... though we may disagree on WHAT else
is wrong ...

> In many respects, I believe that
> eliminating the code test WITHOUT implementing other corrective action
> before or at the same time will just create further problems and an
> inescapable quagmire.

We HAVE proposed "other corrective action" ... it is consistently ignored
by the pro-code side. The only responses we get are a litany of bitching
and Morse Myth regurgitations from the pro-code camp.

> At this point in time, all the most vocal members of
> the anti-code camp can do is beat their chests and hurl personal insults --
> "luddites", "fanatics", the list is endless -- rather than put forth
> a comprehensive restructing plan. Instead, they only want one thing --
> eliminate the code test.

Yin's proposal was summarily dismissed/ignored ... never really considered
in all honesty by the pro-code side. It appears that the pro-code side will
NEVER accept any compromise on the issue ... but we no-coders/modernizers will
never give up the fight. Eventually the olde fartz will all be dead and gone,
but it is doubtful that ham radio will still exist by then ... as they insist
on maintaining the status quo of stagnation, nostalgia, and Luddism regardless
of the cost and consequences.

>seldomly asked to be paid to teach the subject.

It is true that some push Morse with evangelical zeal. But it is equally
true that the only encouragement offered by others is taunts about
laziness. *Professional* Morse telegraphers, of which there are vanishingly
few today, may see new code operators as a threat to their jobs, and
thus may not be helpful. Or they may help anyway to try to preserve
a dying craft.

>Those who had a strong knowledge base in programming languages and
>like to write programs seldomly will try to teach their craft to
>others.

It sounds like you don't have much experience with programmers even
if you have been around computers for a long time. Many have the same
sort of evangelical zeal for their pet programming methods as do Morse
adherents, and offer just as much encouragement and help to those wishing
to learn. There are often vehement flame wars among the followers of
different programming techniques. It can be much like the code testing
debate here at times. But in the midst of that, there are the helpful
voices offering tips and techniques to those who are interested in their
particular methodology. This is certainly true among programmers who
do it as an avocation. They like to show off their latest hack to anyone
who will stand still long enough to be buttonholed.

And it is often true among professionals as well. They don't see new
programmers as a threat to their jobs the way professional telegraphers
might, because there are so many jobs going begging for good programmers
today. Theirs is a vital and expanding field, unlike Morse telegraphy which
is a rapidly vanishing field. There are thousands of books and millions of lines
of source code out there for the aspiring programmer to aid him in honing his
craft. And more are published every day.

>Also, after a program has been written most people don't want
>to give it away. Granted we do have freeware and shareware but that
>has often been the source of viruses.

The Free Software Foundation, the Linux project, and the large volume of freeware and shareware available contradict that notion. Much of this is distributed as *source code*, including everything produced by the FSF and the Linux project. This is the most valuable kind of software because you can freely learn from it and modify or improve it at will.

Vendors of embedded microprocessors and DSP chips also offer large amounts of *free* training materials and large libraries of example source code to help you learn to program their devices. It is very much in their interest for you to learn because it may mean greater sales for their devices.

As with many things which have an ad hoc distribution, virus attacks can happen when only binaries are distributed, but they happen with commercial software too (especially when that's *pirated* commercial software posted to a BBS, which is where many viruses are acquired). When dealing with binary distributions, especially those targeted to the Wintel platform, you have to be very careful, regardless of the source of the program. Even some software in shrinkwrap has been contaminated by viruses. But that's really only an issue for the *appliance* operator. To a programmer, only source is of interest, and it is far harder to hide a virus in source code than it is in a binary.

As mentioned by others, knowledge of programming is becoming an important skill for the radio amateur since so much of radio communications is becoming software driven. If an amateur is to be more than just an appliance operator, he must master this field. This trend is only likely to accelerate in the coming years. Morse doesn't have such a bright future, it has become mainly a curiosity, a relic of bygone days, in the commercial and military worlds. Knowing it today returns little in the way of payback for access to public spectrum (amateur radio is intended in part to act as a reserve of trained operators and electronics experts on which the nation can draw, see 97.1). Knowing Morse does little to further that objective today, but having viable programming skills would.

Amateur radio does indeed have a somewhat special status. As others
have noted, the amateur bands are somewhat akin to the notion of
public parks of the airwaves. They are a place where the public can
transmit on public spectrum solely because they want to, and not to
serve some job related purpose. I think that's true to an extent, but
amateur radio is also a chartered radio service, and Part 97.1 lays
out that charter. Amateurs are supposed to do more than just play
in the park, they're supposed to serve some national purposes as
payback for their access to very valuable spectrum.

[snip]
>
>Before some of you start to flame me over this, I would like to point

>the hams because "they're not using it like they're supposed to be."
>Remember, it doesn't matter if this statement is true or not, it only
>matters that THE FCC BELIEVES IT TO BE TRUE.

That's an astute observation. And for the most part today it is an
objective view of affairs in amateur radio, IE we are not living up
to our charter purposes. We are not using our spectrum to advance

the SOTA. We aren't using amateur radio as a lifelong learning laboratory.We are not developing a reserve of operators and electronic experts skilled in techniques which can contribute to the nation in ways relevant to modern communications needs.

We are barely serving a function for public service and emergency communications (a role largely usurped by the cellphone and other more available and more targeted, communications resources). And we are arguably acting to the detriment of international goodwill with some of our gaming activities. So we do indeed need to focus on once again becoming a national asset instead of tending toward being a national liability.

>Since Morse Code skills set the amateur radio operator apart from any
>other type of civillian radio service, the requirement for the code
>should never have been removed for this reason alone. Once the hams

>we'll all be using the new FM CB band. It doesn't matter that CW is
>obsolete or not! The point is that CW skills are special, and set us
>apart from the rest.

The unhealthy emphasis on Morse does set us apart, but not in a favorable way. It gives the perception (and as you noted above, perception is reality to those who control our destiny as a radio service) that we are backward and clinging to obsolescent methodologies in order to perpetuate an old boys club. That's one of the most damaging perceptions which we must overcome.

We must reshape our image so that we are perceived as a vital, dynamic, and productive radio service which is actively contributing to its charter purposes in relevant ways. We must address our demographics to reverse the slide into senility the statistics currently show. And we must refocus our activities in ways that directly address our charter purposes. *Then* the image we will project to the regulators will be one worthy of our chartered status.

At least you agree that morse code is a waste, but neither code or a
newsgroup post are a waste of bandwidth. Perhaps a post takes up some
memory or storage space, but bandwidth has nothing to do with it.

The point IS that more people would be getting on the air if the code
requirement was gone. Until then, they are here.

>(b) what would you like the overall exam to be like?

When the Morse speed tests are dropped, it will be because government recognizes that they no longer relevantly address government concerns about licensing radio amateurs to use HF spectrum. Thus there is no need whatsoever to substitute *anything* for them. Requirements are either necessary, or they are not. This one isn't. There is no justification for a quid pro quo.

However, in answer to the (b) portion of your question, it should be obvious to most amateurs that the written exams have not kept up with modern technology and communications practice. Thus they need to be revised to reflect those things amateurs need to know to be competent as amateurs today. This will result in a net expansion of the material covered in amateur testing. In particular, there needs to be an increased emphasis on an amateur's ability to recognize and solve operational problems which offer the potential for harm to himself or others, with harm having a meaning inclusive of harmful interference. The exam would address both technical and operational aspects of amateur situations, IE one question might address how to recognize and correct overmodulation, another might address proper behavior on an emergency net.

Ideally, I'd like the amateur exam to become open reference book, with most of the questions being "word problems" where the amateur is expected to recognize the nature of the problem and solve it. Questions which require a rote arithmetic manipulation would be relatively few. The focus would be on understanding concepts rather than mere crank turning. References commonly available to amateurs, or which amateurs should have commonly available, would be permitted so that the amateur would demonstrate problem recognition and solving skills in a manner similar to that which he would be expected to use in the real world.

Due to FOIA, there must be a pool of such questions made public. That Q&A would not be permitted as one of the references the examinee could use. And the pool should be sufficiently large that memorization skills would not be the primary focus of the test.

I see the exam as consisting of two 250 question elements which would be taken in morning and afternoon sessions to complete the exam. This is similar to state board licensing practice in several fields. That seems to work well in practice.

While this may sound daunting, the exam should not be so difficult
that a bright and prepared eighth grader couldn't make a passing score.
(Many current amateurs might have problems with it if they didn't
prepare, however, because it would include concepts for which many
current amateurs have demonstrated a woeful lack of understanding,
to the detriment of those with which they share spectrum.)

But there is good reason to believe that we need a certain growth rate just to stay even. With the current demographics of amateur radio, and the 10 year license renewal, it is quite likely that the growth we are seeing is actually not growth at all. In other words, the dead and dying, of which there must be an increasing number given amateur age statistics, are not being properly shown in amateur licensing statistics since they could be deceased for up to 12 years before the FCC purges their call from the database. This situation must get much worse in the coming decade as a majority of current amateurs run out their life expectancies. An insurance actuary could give us precise projections, but you don't need to be an actuary to see the situation is serious.

>IMHO, a major problem in Amateur Radio today is the lack of sufficient
>Elmers to help the newcomers experience ham radio. Before we seek more
>growth, we need to get a better handle on what growth we have already
>seen.

We do have a number of problems there. And it is on both sides of the street. A fairly substantial number of long time amateurs seem resentful of newer amateurs, particularly Techs, and don't wish to associate with them. And many newer amateurs sense this resentment and avoid older amateurs in general because of it. There is also the factor that a good number of older amateurs aren't as up to speed on amateur radio as we'd like, and advice they do give is often incorrect or irrelevant to the interests of the newer amateurs. This makes a generational bond problematic.

But I don't think it is that grim. At least in my circle, we have a bunch of people who are openly welcoming of newcomers, and capable of giving them sound advice and assistance. I spend an inordinate amount of time doing that myself, and I am not alone. We can't go out and grab them by the scruff of the neck and make them listen to what they don't want to hear, but those who seek help find it.

And it is far from a one way street. I have witnessed many cases of a younger and relatively newly licensed amateur helping an older amateur

get up to speed on certain facets of amateur radio. Just because one has been licensed a long time doesn't mean one's skills are up to date. Many of the new people are bringing with them skills which have application in amateur radio. It is often worthwhile to listen to them. I've learned a lot from some of them.

>No body of knowledge worth having is easily aquired.

True, but that isn't a closed set. Knowledge not worth having
may also be difficult to acquire. Or knowledge that is only
marginally worth having may be difficult to acquire. One has
to ask where the line should be drawn. For the purpose of
licensing access to public spectrum, the line needs to be
drawn at the point where legitimate government licensing
concerns are addressed. Thus the question becomes, does
Morse speed testing any longer address a legitimate government
licensing concern? I haven't seen anything even slightly
compelling which says it does.

Oh, you got the short form catalog. There's a newer one that's
500+ pages, and the next printing is supposed to go to 700+
pages according to the store manager. And that still doesn't list
everything they have in stock.

They are opening a new store here, the size of a K Mart. Their
reps were at our hamfest this past weekend with some incredible
bargains, and handed out the newer catalog. Lets patronize these
folks and keep them in business. Digikey needs the competition.

In fairness I will note that not all of their prices are that great.
Some items are fairly priced, but some are almost twice the price
you can find them other places, so caveat emptor. But still, in stock
and in town is worth something.

SILENT KEY

For the information of VKs and other operators, Ray Baty VK2BT (Broken Toenail) of St Ives passed away on Sunday night (19th October), aged 69.

He suffered a torn aorta and despite a 10 hour operation and 50 bottles of blood, he didn't recover.

Ray was ex-OTC, working in the Pacific on such rare DX locations as Fanning Island amongst others. He was still active on 20 & 40m CW as well as chatting to his old-timer mates on 2m.

He was one of nature's gentlemen, always ready to lend a hand or have a yarn.

To his family Joan, Jenny Judy and Trevor our sympathies.

--Paul Rodenhuis VK2AHB

DIVISIONAL NEWS

VK2 CONFERENCE OF CLUB

Attention Clubs your Conference of Clubs is on at Amateur Radio house on this Saturday, 15th November, commencing with coffee and biscuits at 8.45 am, business commences at 9.00 am.

-- Ken Westerman VK2AGW, VK2 Affiliated Clubs Officer

1998 CALL BOOK OUT NOW

The 1998 Australian Radiocommunications Reference Guide and Callbook is expected to be in stock in the newxt few days. The price is $15 for non-members, $13 to members. If you would like it posted to you, please add $2.50 for postage & handling.

-- submitted by Eric Fossey VK2EFY - Divisional Secretary

and some more information on the new callbook from Federal Media Liaison Officer, Roger Harrison VK2ZRH:

The Wireless Institute's Call Book for 1998 was published on 31 October and will be available through state Divisions from 10 November, or earlier.

Now titled "The Australian Radiocommunications Reference Guide and Radio Amateurs' Call Book," the 158-page book - larger than the 1997 edition - is selling for same old price: $14.95, or $13 for WIA members. Post and packaging charges for mail order apply. It will also be on-sale through selected Dick Smith stores. Look for it - the cover's bright yellow!

Aside from the title change, there have been significant changes to the content and the layouts, in an effort to make the book more "reader friendly" and to appeal to a broader audience.

While the 1998 publication retains the broad division of reference material up front, followed by the call sign listings, this time the two sections have separate, identifying folio lines.

The reference section has been entirely "refreshed", with 15 items of entirely new material added, in addition to 14 items of popular and essential material which have been completely updated.

New material includes:

6m beacons worldwide,
10m beacons and repeaters worldwide,
NZ beacons,
the five-band international HF beacon network,
low frequency beacons, 200-400 kHz,
how to attach coax plugs, correctly,
how to get started in packet radio,
packet wormholes explained,
a full directory of packet radio systems,
RS232 connections you need to know, and
WIA worldwide Web sites, and more.

The completely revised and updated material includes:

the directory of nearly 500 Amateur Licence Examiners,
the bandplans from MF (160m) to SHF,
Australian QSL Bureaux,
Australian beacons and repeaters from HF to SHF,
Australian VHF-UHF records,
WIA broadcasts, and
operation of amateur stations in Australia, from the ACA, etc.

Only three items have been repeated: Australian and NZ TV channel frequencies, and the WIA affiliated clubs directory.

The WIA decided to revitalise the publication in preparation for the introduction of the call sign listings in digital form - anticipated next year - so this annual publication will have to have a new role.

This year, the call sign listings have been reproduced, unedited, from the Australian Communications Authority's public register of licensees.

All the details are there, warts and all - 16,540 of them in the 100-page section. They are listed in straight alphanumeric order, in line with international practice, rather than the 2-letter/3-letter suffix order, ranked
alphabetically, as in the past. For better readability of the necessarily small typeface, the listings have been typeset in upper and lower case. There are no suppressions of licensee details in the 1998 Call Book. The ACA has an obligation under the 1992 Radiocommunications Act to maintain a public register of all radiocommunications licensees, to which they plan to provide access by various means. For example, on their Internet web site.

Because of this, and because the Call Book is no longer published under contract from the Australian Government Publishing Service (which required offering suppressions), the WIA is no longer involved in maintaining suppressions in the Call Book.

In the 58-page Reference Guide section, 90 Australian beacon frequencies are listed, 236 packet radio system frequencies, and 403 repeater system frequency pairs.

There are 210 2m voice repeaters around Australia, and a further 110 on 70cm.

For 6m enthusiasts, 150 beacons around the world outside Australia are listed, along with 170 10m beacons across the globe.

If you're interested in the low frequencies, below the AM broadcast band, 300 LF beacons between 200 kHz and 406 kHz, located around Australia and New Zealand, are listed along with their locations.

For packet radio enthusiasts - beginners and old hands alike - there's plenty of reference material. Beginners are given a guide on where to start. For those already using packet, the technology and applications of packet wormholes are explained. The five-page Australian Packet Radio Directory lists 236 system frequencies.

If you've recently had your interest sparked in Amateur Radio Direction Finding - ARDF - the radio sport taking off in Asia, Europe and North America - the ham radio activity for which you don't need an amateur licence - there's an illustrated explanation and details of who you contact to get involved.

The 1998 Australian Radiocommunications Reference Guide and Radio Amateurs' Call Book appeals to many interests. The print run is limited. Don't miss out. Order your copy now.

WICEN NEWS

Listeners may have seen the editorial in the November issue of "Amateur Radio" magazine, exhorting a particular standard for the ubiquitous "T-connector". Unfortunately, it is sad but true that there is NO national standard for this connector, and the editorial merely reflects what Victoria happened to adopt. In New South Wales, WICEN followed the practice of our own emergency organisations, such as the VRA, where the top of the "T" is POSITIVE and the bottom is negative. The mnemonic for this is that the vertical pin resembles an earth pin i.e. negative ground. Although everyone is free to use his or her own standard, please be aware that it is wise to follow whatever is in common use in your area of operations; the best thing to do would be to ask around, and carry a multimeter, along with a polarity-changer, on activations and exercises.

A new event on next year's calendar is the annual Hawkesbury Classic Paddle, which following the Full Moon will be on the weekend of October 31st to November 1st.

This is a reminder that the "Ironman Australia" Forster-Tuncurry half triathlon will be held on Sunday 23rd November. The event coordinator for this exercise is Steve Pettet VK2KXQ, to whom all enquiries should be directed, via telephone on (02) 6555-3177, or packet radio as VK2KXQ at VK2EO. Last year there was no WICEN or any other Amateur Radio involvement in the event, as the organisers believed that the commercial radio network would suffice. It seems that this may not have been the case since WICEN has now been asked to assist in this as well as the major event, and 24 operators are required. The briefing for this event will be held at 1800 hours on Saturday 22nd around the Hunter WICEN van which is to be located adjacent to the surf club at Forster Beach. The frequencies of 146.525 MHz FM and UHF CB channel 20 will be used as liaison frequencies on Saturday.

Of interest to our listeners on the Canberra border is that WICEN ACT are looking for Amateurs to assist with this year's FAI Rally of Canberra. This event runs from lunchtime Friday November 28th until the afternoon of Sunday November 30th. Those interested in assisting are asked to contact either Simon Trotter VK1AUS, SCO WICEN ACT, on 0419-439-925, packet as VK1AUS at VK1BBS, Internet as vk1aus@dynamite.com.au; or Phil Longworth VK2ZPL, DSCO WICEN ACT on (02) 6216-4889 during business hours, or packet as VK1ZPL at VK1BBS, or Internet as Phil.Longworth@ato.gov.au.

Looking into the future, we have been advised that the date for the next Bushwalkers Rogain is the weekend of 27-28th June, next year; the location is to be advised, and the commander is Alan VK2YYJ.

If any region has any news or information they would like published, then please contact the Publicity Officer, Dave VK2KFU. If further information about WICEN (NSW) is required, please contact the acting State Coordinator, Alan VK2YYJ, on the WICEN mobile telephone, 015-097-217.

-- Dave Horsfall VK2KFU, President, WICEN (NSW) Inc.

ACA UPGRADES AMATEUR INFORMATION ON ITS WEB SITE

Information for amateur operators and prospective amateurs published by the Australian Communications Authority, was updated at the end of October and published on their Internet Web site at www.aca.gov.au.

The four publications are:

1/ the "Amateur Licence Information Paper", covering licence grades, qualifications, examination exemptions, special call sign allocations and fees etc;

2/ "Amateur Examinations", covering the grades of Amateur Certificate of Proficiency, examination arrangements, theory and regulations qualifications, Morse qualifications, and syllabuses for the AOCP (full call), AOLCP (Limited), NAOCP (Novice) and NLAOCP (Novice Limited) qualifications, etc;

3/ "Amateur Operating Procedures", covering emission modes, interference, call sign suffixes, call-and-reply procedures, emergency procedures, the Q-code, and more; and

4/ "Amateurs Visiting Australia", for the information of overseas-licensed amateurs wanting to operate while visiting Australia.
For those who don't have Internet access, copies of these papers can be obtained from the nearest ACA Area Office.

-- Roger Harrison VK2ZRH, Federal Media Liaison Officer

DX REPORT

TRISTAN DA CUNHA - Ian, ZD9IL, is active most days. He has been spotted on 12 and 10 meters.

CHAD - Jim, TT8JWM, and John, TT8JFC, will be active on RTTY from December 10.

GREENLAND - Kim, OX3FV, has been very active on 160 meters and the newer bands on CW. Joergen, OZ8AE, will be active as OX/OZ8AE until December 1.

UNITED NATIONS - Club station 4U1ITU, ITU Headquarters in Geneva, will operate as 4U1WRC until November 21 in celebration of the 1997 World Radio Conference (WRC-97). This station will count for ITU HQ for DXCC.

TROMELIN - Henri, FR5ZQ/J, has been spotted on 20 and 10 meters.

MALI - Larry, TZ6VV, will be active for about the next 6 weeks.

ZAMBIA - Ely, IN3VZE, will be active as 9J2CE until November 10.

UNITED ARAB EMIRATES - David, K3LP, will be joined by Rich, KE3Q in Dubai from November 22 to December 2.

OMAN - David and Rich plan to be active here from December 2 through 5.

GUINEA BISSAU - Dave, J52IM has been found on 15 meters.

JORDAN - George, JY9QJ has been heard on 24909 kHz around 1520z.

GUAM - Bill, NH6D, has moved to Guam and will be active on all bands as NH2/NH6D.

--ARRL DX Bulletin 47, dated 6 November, 1997
